# Expand Your Capabilities!

## (without collapsing your checkbook)

When it comes to number crunching, data processing, information storing, graphics generating, presentation blasting performance, Sceptre notebooks rock!

These Sceptre notebooks, from the extreme-performance/extreme-value S4500 featuring a 166 MHz Intel Pentium® Processor with MMX™ technology to the ultra extreme-performance S5500 featuring a 233 MHz Intel Pentium® Processor with MMO™ (Intel Mobile Module) technology, come with these features:

- Intel low voltage mobile TCP Processor and system controller chipsets
- 2 Type II / 1 Type III PCMCIA slots
- Built-in stereo sound
- 9-cell Lithium-Ion battery with built-in remaining life indicator
- Microsoft Windows 95 installed
- Industry standard security lock ready
- IrDA 1.0 Standard compliance
- One year warranty

### Options for Your Soundx

- 33.6k Fax/Modem
- IO port replicator
- Auto hot docking station
- Extended warranty

| SOUNDX 5500                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | SOUNDX 5000                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | SOUNDX 4500                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

# What Will Our AlphaScan Displays Do To The Competition?

## When it comes to producing the finest displays, nobody outguns SAMPO.

**More Reliability** - The world's largest computer manufacturers have used SAMPO displays since IBM introduced their first PC in 1982. And most of these displays are still operating. Now that's reliable.

**Superior Performance** - Our on screen performance is visually outstanding. You'll get vibrant colors and pin-sharp text with every SAMPO display.

**Priced To Sell** - The fact that we offer the most aggressively priced displays is the best kept secret in the industry. Feel free to call us, and we'll tell you all about it.

**Incomparable Service** - We do whatever it takes to earn and keep your business. With SAMPO, you get Technical, Sales, Customer Support, Shipping or Expediting service the way you want it.

## 6800/6800XL

- Intel Pentium® CPU w / MMX up to 200MHz
- 512KB Pipelined-Burst L2 Cache Memory
- 12.1" SVGA DSTN LCD
- 12.1" SVGA / 13.3" / 14.1" XGA TFT LCD
- 2MB / 4MB EDO Video Ram
- 64-bit PCI Video Controller with Graphics Accelerator
- Expandable EDO Memory up to 72MB / 128MB
- Built-In 16X / 20X CD-ROM
- Flash BIOS with Plug & Play
- 3 x Type II or 1 x Type II + 1 x Type III PCMCIA ( 2 x Type II or 1 x Type III for 6800XL )
- Supports CardBus & Zoomed Video
- 16-bit Stereo / 3d Sound System with Hardware WaveTable
- Infrared FIR / Dual USB Port
- RCA / S-Video Jack for TV-Out

Option: Battery Charger/Car Adapter/Hot Port Replicator

## 2600/2700

- Intel Pentium® CPU w / MMX up to 233MHz
- Intel Mobile Triton II 430TX Core Logic
- 256KB / 512KB Pipelined-Burst L2 Cache Memory
- 12.1" SVGA / 13.8" XGA DSTN LCD
- 12.1" SVGA / 14.2" XGA TFT LCD
- 2MB / 4MB EDO Video Ram
- 64-bit PCI Video Controller with Graphics Accelerator
- Expandable EDO / SDRAM Memory up to 128MB
- 2 Smart Bays, supports 2nd & 3rd HDD
- Removable 14x / 20x CD-ROM
- Flash BIOS with Plug & Play
- 2 x Type II or 1 x Type III PCMCIA
- CardBus & Zoomed Video
- 16-bit Stereo / 3d Sound System with Hardware WaveTable
- Infrared FIR / RCA Jack for TV-Out / USB Port
- Inside / Attachable AC Adapter / Hot Docking / Smart Battery

Option: Port Replicator/Mini Docking Station/PCI Docking Station/ Internal Fax Modem/Car Adapter/Video Capture

## 9750/9780

- Intel Pentium® CPU w / MMX up to 233MHz
- Intel Mobile Triton II 430TX Core Logic
- 256KB / 512KB Pipelined-Burst L2 Cache Memory
- 12.1" SVGA / 13" XGA DSTN LCD
- 12.1" / 13.3" / 14.1" XGA TFT LCD
- 2MB / 4MB EDO Video Ram
- 32-bit / 64-bit PCI Video Controller with Graphics Accelerator
- Expandable EDO / SDRAM Memory up to 128MB
- Removable / Built-In 16x / 20x CD-ROM
- Flash BIOS with Plug & Play
- 2 x Type II or 1 x Type III PCMCIA
- CardBus & Zoomed Video
- 16-bit Stereo / 3d Sound System with Hardware WaveTable
- Infrared FIR / RCA Jack for Video In / Out / Dual USB Port
- Hot Docking Station, Smart Battery

Option: Port Replicator/PCI Docking Station/Battery Charger/Car Adapter

# SCSI STORAGE SUPER SALE

## NEW! CD ROM TOWER KIT 7 DRIVES & CONTROLLER

### \$395

Don't even think of using a CD-ROM changer on a network - unless you've got lots of time. With multiple user access, performance plummets. The solution is this Fast SCSI-II heavy duty CD-ROM tower kit from the Depot. You demand high speed, and you get it with this complete stand alone subsystem ready to plug and play on any PCI equipped PC under Windows '95 or NT.

#### INCLUDES FREE

- PCI SCSI CONTROLLER
- EXTERNAL CABLE
- SCSI TERMINATOR

## NEW! HIGH PERFORMANCE 9000MB 5 1/4" DRIVES

### \$495

The best drive for network servers is now available for your graphic or multimedia workstation. Store vast amounts of digital data and access it quickly. A hefty 1MB cache increases performance and buffers data to 10MB/sec peak transfer rates. Choose this economical narrow SCSI version to accelerate workstations and file servers with the standard 50 pin SCSI-II interface. Pick one up today and get the best SCSI performance available at an affordable price.

## NEW! 2GB SEAGATE DRIVE 3 1/2", 7200RPM, 8.5ms

### \$189

Zip through disk intensive applications. Store vast amounts of data and access it quickly. An optional SCA to SCSI adaptor has 3 interface connectors on one drive:

Industry standard 50 pin SCSI-II, 10MB/s;  
Upward compatible 68 pin Fast & Wide SCSI,

20MB/sec; Disk array & workstation standard hot plug 80 pin SCA.

These new Seagate drives are compatible with any SCSI system, from older 10MB/sec SCSI-II machines to minicomputer disk arrays.

Now you can accelerate your SCSI system, just by adding a drive.

## CD-ROM DUPLICATOR NO COMPUTER REQUIRED

### \$1295

It just doesn't get any easier than this. Pop a CD-ROM into the *CD Dupe-It!*, and push the button to copy it to the A/V Certified hard drive. Then insert a blank recordable CD, and push the button again to produce an exact byte-by-byte copy of the original CD-ROM. You'll copy data, audio and Multimedia CD-ROMS. *CD Dupe-It!* easily produces perfect copies, even down to the serial numbers. Includes everything you need to start duplicating today.

*Intended for in-house duplication and backup purposes only. All applicable copyright provisions must be observed.*

# More Internet for Your Money!

*Take your time (and ours) to see for yourself.*

**Test  
and  
try  
before  
you buy.**

Let's face it. There are lots of ways to access the internet. Not everyone offers the same features and amenities. You get a lot more with a Slip.Net account. Take a FREE test drive—Slip.Net offers you more!

## Access the Internet with Netscape Navigator.

For an additional \$19.95 you'll receive a registered copy of Netscape Navigator™ (a \$49.95 value) Use Netscape Navigator™ to surf the web, send e-mail, and follow your favorite news groups.

## Slip.Net Web Hosting and Business Solutions

Slip.Net provides Internet solutions for every size business. For \$19.95 a month we can put your business on the web. Our service includes virtual hosting of your domain, unlimited e-mail forwarding, 1000MB of data transmission/50MB of storage per month, web reporting and more. Call **415.281.4447** to get started and find out how we can help your business. Or signup online at **www.slip.net**.

# Student Scanner – \$128!

Adding a scanner to your home PC is a great way to stimulate a student's creativity. Once they see how easy it is to scan color pictures, your kids will be adding graphics to every book report, research paper, or science project they're assigned.

This month, Envisions is making it easy to get started scanning with a special sale on the Umax Astra 300P, a compact (16" x 12" x 3") flatbed scanner that features 24-bit color and scans in a single pass. Because the Astra 300P connects directly to the parallel port of your PC, setup is quick and easy.

Thanks to a rebate from the manufacturer, this scanner has never been more affordable. Why not pick one up for the student in your life?

**Umax Astra 300P – \$128! →**

Price after \$30 manufacturer's rebate. Exp. 9/30/97

# BACK-TO-SCHOOL SALE!

*Already graduated? Check out the other great scanning specials available at the Envisions Scanner Outlet...*

## Umax Astra 600S Now Just \$198!

**Fast SCSI scanning & legal-size bed**

The Umax Astra 600S is the only scanner in its price range with 30-bit color and a full legal-sized scanning bed. The Astra 600S uses the same high-quality optics that have made Umax the 1997 Editors' Choice at both *PC Magazine* and *Macworld*.

With the 600S, you'll be able to add graphics to everything you produce on your PC. You can scan color photographs at 300dpi and add them to ads, brochures, and catalogs, or use them to spice up your web site.

The Astra 600S comes as a complete scanning system, with Adobe PhotoDeluxe for scanning, editing, and printing photos; Presto! PageManager for converting text; Windows 3.1, Windows 95, Windows NT & Mac drivers; and a SCSI-2 adapter card and cable.

Umax Astra 600S Complete Scanning System (Reg. \$299) ..... \$198  
Umax Astra 600S System with Adobe Photoshop 4.0 ..... \$499

## Umax Astra 1200S Now Just \$398!

**Great resolution and color quality**

*PC Magazine* says "Business and personal users need an easy-to-use device that will handle both document scanning and color scanning at an affordable price. For those users we recommend our Editors' Choice, the UMAX Vista-S12 (\$500 street). The combination of value and performance delivered by the 24-bit, 600-dpi Vista was unparalleled in this roundup."

Now the S12 has been upgraded to the Astra 1200S, with the same great color quality *plus* a legal-size bed and a true 30-bit scanning process. These features make it an even better value at the same price!

The Astra 1200S comes with the same great software bundles as the other Astra scanners, and includes Windows 3.1, Windows 95, Windows NT & Mac drivers; and a SCSI-2 adapter card and cable.

Umax Astra 1200S Complete Scanning System (Reg. \$499) ..... \$398  
Umax Astra 1200S System with Adobe Photoshop 4.0 ..... \$598

## Umax Gemini D16 Now Just \$598!

**Great resolution and color quality**

It's not too late to get your hands on a Umax Gemini D16 scanner, a longtime favorite of graphics pros because of its high-powered 800dpi maximum optical resolution and 30-bit color. Envisions bought the last batch of Geminis the Umax factory ever made, and now we're closing them out for just \$598. Because of their sophisticated dual-lens design, these units can scan a whole page at 400dpi at top speed, or a detailed color photo at 800dpi.

The Gemini D16 Scanning System includes Adobe Photoshop LE; Umax MagicScan drivers for Windows 3.1, Windows 95 & Mac; and a SCSI-2 adapter card and cable. Hurry, when these Geminis are gone, they're gone forever!

Umax Gemini D16 Complete Scanning System (Reg. \$999) ..... \$598  
Umax Gemini D16 System with Adobe Photoshop 4.0 ..... \$798

186

### Help Us Choose The Next MicroTimes 100

It's that time of the year again, and we're compiling our annual list of industry luminaries for our Eleventh MicroTimes 100 in Issue #174. And while many of them are world-renowned, we're very interested in hearing from our readers, because they always tell us about interesting and overlooked folks.

So if you think there's some interesting unsung teacher, tech support guru, etc., who should be on our list this year, head over to page 186, or fill out a nomination form online at

<http://www.microtimes.com/webfrm/microtimes/mt100.html>, and tell all. Nominations close on Friday, November 21, so don't delay!

## Custom **ULTRA SCSI** Solutions

### SCSI **Vue Active** Terminator

From: **\$59**

Four models available with optional Remote LED Pak. These are the finest terminators available, they fix SCSI problems and improve reliability.

Benefits:

- Improves SCSI Bus Performance
- Less Errors; More Reliable Data Transfer
- Diagnoses Problems - Analyzes Signal Quality

Features:

- Active Regulation - Fast 50 & Fast Wide 68
- Status Indicators - Gold Contacts

### SCSI **Vue Gold** Diagnostic Cables

From: **\$39**

Features:

- Diagnostic Indicators
- Large Ferrite Filters
- Triple Shielding (Unique Design)
- Double Gold 20u" Plated Connectors
- Extra Heavy 26 Gauge Wire - 100 Styles in Stock

Benefits:

- No Loss Of Important Data
- Faster Performance
- Test Cable Integrity

### Ultra SCSI Cases

From: **\$99**

Temperature ALARM! Automatic Monitor & Control

The Vertical 3.5" Case Kit offers a small transportable package. Ideally suited for moving around, this durable case can take a beating. Universal 35 Watt power supply. The Horizontal 3.5" or 5.25" Case Kit Offers a stackable solution for any desktop need. Shown with Optional Bay Cables installed.

Open Face and Closed Face Models Available. Optional 50 or 68 Pin Cables Available.

Bay Cooler Kit keeps those **HOT Ultra SCSI Drives** COLD as ICE!

Dual Fan & Bracket: **\$29**

**HOT SWAP Pull Out Bays**  
Compatible with all 50 pin & 68 pin SCSI Buses up to Fast SCSI 2. From: **\$79.00**

### Teflon External 90 Ohm SCSI Cables

From: **\$159**

Features:

- Perfect 90 Ohm Impedance Match
- Triple Pronged Connector With Gold contacts

### Custom **Teflon** Int. Cables

From: **\$39**

Benefits:

- Less Errors, Ultimate Performance
- Silver Wire Improves Signal Quality

Features:

- Perfect 90 Ohm Impedance
- Custom in 1 Day
- Triple Pronged Connector - Gold contacts Silver Wire

### Active 2-1 Switch/Repeater

From: **\$599**

Benefits:

- Up to 14 Devices to 1 Computer
- Share Devices Between 2 Computers

Features:

- 2-1 Active Digital Switch/Repeater
- Regenerates SCSI Signal for Long Runs

### Diagnostic Adapters

From: **\$49**

Styles: Gender Changers

- Both 50 pin and 68 pin (all combinations)

Gender Changer

- 68 pin Drive to 50 Bus
- 68 Pin Drive to 50 Pin IDC (runs wide drive as narrow)

Drive Bus Changer (run 68 pin on 50 pin bus)

Styles: 68 Pin Adapter Wide to 50 Pin Narrow

- 68 Pin External Adapter to 50 Pin (converts Host Adapter)

### Cable Tester - LED Readout

From: **\$139**

This Digital SCSI Cable Tester can test all the popular cable styles for opens, shorts, and unreliable operation. Battery powered for easy use anywhere you need it. Three models to choose from:

- 50 pin Centronics
- 50 pin IDC
- 68 pin MicroD

Benefits:

- Models for all SCSI types
- Fixes SCSI Cable Problems
- Doubles Cable Length (up to 18')
- Active Termination and Signal Purification
- Ultra Fast Performance for Added Capabilities
- Diagnostic Capabilities - 30u" Gold Contacts

# Bring your sales force into focus!

## It's a scary world out there.

In the past, your outside sales force was virtually in the dark, wondering if the company was supporting them or hanging them out to dry. But with our new Office Pro Executive Series Notebooks equipped for video conferencing, things are crystal clear. No longer will you puzzle over the activities of your sales force. With the touch of a button, you can now video conference with that elusive client, hold meetings using the Internet, or simply keep your outside sales force focused. All at a cost that won't blind side you. And with our one year on-site warranty, your sales team won't have to worry about losing the connection.

  - Up to 233MHz Intel MMX<sup>®</sup> processors
  - AMD K6 MMX<sup>®</sup> processor
- Dual Pentium Pro SBC
  - Up to two 266MHz Pentium<sup>®</sup> Pro processors
  - Dual Voltage Regulator Modules (VRM)
  - Up to 256MB system memory
- Integrated SVGA video and Ultra Wide SCSI models
  - ATI Mach64 video with 2MB video memory
  - Adaptec Ultra Wide (AIC-7880) SCSI interface
- ISA and PCI passive backplanes
  - 4, 8, and 14 slot 16-bit ISA backplanes
  - 8 and 14 slot PCI/ISA backplanes
  - Bridged 14 slot backplane with 7 PCI slots
  - Segmented backplanes available

## NEW ATX ENCLOSURES

## ENCLOSURES

- ATX form factor enclosures available
- Integrated 10" color or 9" mono SVGA monitors
- Anodized aluminum chassis
- 8 and 14 slot ISA or PCI/ISA backplane models
- AC, DC, & Redundant power supply options
- Designed and made in the U.S.A.
- Custom enclosures available

## MONITORS AND KEYBOARDS

- 9" to 17" rack mount monitors
- Mono SVGA to Multi-frequency models
- Rack Mount keyboards with integrated mice
- Rack Mount monitor and keyboard enclosures

## PRINTERS

- Rack Mount Color Inkjet printers
- Rack Mount HP 600 series Inkjet printer enclosure
- Parallel Interface

# Faster, Better Internet Access is Within Your Reach.

(so is some cool free stuff.)

## FREE Internet Software

Call today for your free copy of the fastest and easiest way to "Reach the Internet!" There is no obligation — just load the software and you can be on the Internet in minutes!

## FREE Internet Book

As a special offer to new members, the book *Reach the Internet!* is yours FREE when you sign up! This 104-page book is an easy way to get the most out of your Internet experience, and is a valuable reference for both new and experienced users.

**Want fast, reliable Internet access?** Is your provider not delivering the services you expect? InReach gives you a better class of Internet service at a fair price. After a one-time setup fee of \$19.95, you can enjoy **unlimited**, superior Internet access for just \$19.95 a month!

**\$19<sup>95</sup>** per month  
**Unlimited Hours**

**Experience the service you've always wanted.** Local access statewide in California, so you never have to pay for toll calls. Toll-free, friendly technical support. **10 MEGS** of free web space for your personal or business web site. **Fiber optic connections** direct to the Internet backbone for the ultimate in network performance and reliability. Plus a collection of extras such as local chat rooms, LookSmart's directory to the best of the web, online gaming servers, and much more!

**Fast 56K Access.** InReach is one of the only Internet providers to support **BOTH** competing 56K modem technologies. Our 100% digital network works with any 56K modem using either US Robotics' x2 or Rockwell's K56flex technology. We've added over 130 special 56K dial-up numbers statewide, to make sure you always connect to the correct type of modem at the highest speed possible. Access the Internet **nearly twice as fast** with InReach!

**Guaranteed.** We are so sure that you will enjoy our superior Internet service that we offer you a 30 day money-back guarantee! Try us for a whole month. If you are not completely satisfied, cancel for a full refund. The book and the software will be yours to keep. **Call today!**

BOTH X2 AND K56FLEX 56K MODEM SUPPORT • LOCAL CHAT ROOMS • LOOKSMART WEB DIRECTORY AND SEARCH ENGINE • QUAKEWORLD AND KALI ONLINE GAMING SERVERS

## Key Escrow Rears Its Ugly Head In Congress

### **Bills moving**

around Congress and the Senate right now would require that every person and every company turn their computer keys over to other companies so that the police can intercept and read every piece of communication anywhere. As chilling as this might sound for privacy, there's a much deeper and more troubling aspect: It could threaten the entire financial system of the US. Yet many of our legislators are happy to submit to the FBI's suggestions that there is nothing wrong with the whole idea.

The basic purpose of many of the bills is the same: To force everyone who wants to encrypt a message (or even files on their hard disk) to hand over copies of the keys to an outside company who would turn them over to the police if given a warrant. The system is called "key escrow," since everyone is giving their keys to an escrow-like company. This is not just for Internet messages: It's for everything you do on your computer, such as your checking account records. If the bills being bandied about pass, you'll have less than two years to change all your software to comply with the new laws, or you will become a felon.

As the current situation points out all too well, legislatures and the Internet don't mix very well. Although most people reading this column would probably think that the Internet is a great or at least good thing, and would understand its great potential, many legislators view it as

***Bills moving around Congress and the Senate right now would require that every person and every company turn their computer keys over to other companies so that the police can intercept and read every piece of communication anywhere.***

something foreign and frightening. The proposed anti-encryption laws play on those fears while ignoring the reality that hundreds of billions of dollars of banking and other financial information is at stake.

### **Pretending This Will Work**

The FBI has taken advantage of the fact that encryption is pretty complicated stuff in order to make it seem like their solution would be easy to implement and would help catch criminals who might otherwise escape. Their argument is simple: If it's illegal to hide a message in a way the government can't get at with a subpoena, criminals won't do it so we can catch

them more easily. It's not just criminals who use encryption, however.

Tens of billions of dollars are exchanged by financial institutions every day, and all of this uses encryption so that other people can't see the transactions. Many businesses use encryption on a daily basis to pass company secrets over the Internet without worrying about their competitors being able to see the messages. All modern hospitals use encryption when they pass around patient records so that eavesdroppers won't be able to collect medical records, and so on.

Of course, some people also have personal reasons for using cryptography. Most Americans have reduced their expectations of privacy over the past 50 years after hearing about governmental abuses perpetrated from the FBI on down to local police departments. We sigh and say "Well, I guess I don't get to hide that much," just like people in more repressive countries have gotten used to. The opponents to key escrow have summed up their position quite simply: "My lock, my key."

The current bills are a response to the FBI's constant statements that they need key escrow in order to be able to effectively wiretap on the Internet like they do on phones now. However, the FBI hasn't proven that need, even after being asked repeatedly by Congress for some backing to their claims. The response has been the same as it always is: Non-criminals have nothing to fear.

# If you build it...

The World Wide Web is the fastest growing way for businesses to reach affluent computer users. With millions of technology enthusiasts and professionals using it daily, the Web offers you an incredible opportunity to promote your business internationally, capture prospect information, and update product information instantly. Most importantly, Cyberspace consumers are hungry for new products and services - so if you build a Web site, prospects will visit.

We are an advertising and marketing communications agency. To serve our clients, we create informative and exciting Web sites. We provide:

- Web Site Design and Content Development
- Site Hosting and Management
- Image Scanning
- Digital Video and Photography
- Digital Sound Files
- Interactive Forms and Database Integration
- Key Word Search and Feedback Forms
- CGI, HTML, JAVA, Shockwave, Perl Programming
- Web Page Usage Tracking (Visitor Statistics)

As a full service corporate communications agency, Web site design and management are right up our alley - so call us today to launch your business into the 21st century.

ウェブサイトの構築をお考えですか...

ワールド・ワイド・ウェブは、莫大な数のコンピュータユーザーに出会うためのビジネスを、最も効率よく拡大するための手段です。ウェブは、ビジネスの海外進出やリサーチ情報の取得、製品情報のいち早い更新といった、絶好の機会をあなたのビジネスに提供し、ハイテク好きの多くの人々や、プロフェッショナルが毎日これを使っています。なにより重要なことは、Cyberspaceの利用者達が、いつも新しい製品やサービスに飢えているということです。ウェブサイトを構築すれば、有望なお客様が訪れることでしょう。

私どもは、広告とマーケティングの代理店です。情報を満載した魅力的なウェブサイトをお客様に提供しています。次のようなサービスをいたしております：

- ウェブデザインとコンテンツの開発
- サイトのホスト運営と管理
- イメージスキャン
- デジタルビデオと写真
- デジタルサウンドファイル
- 対話型フォームとデータベースの統合
- キーワード検索とフィードバックフォーム
- CGI, HTML, JAVA, Shockwave, Perl のプログラミング
- ウェブページ利用状況調査 (訪問者の統計)

総合的なサービスを行うコミュニケーションの代理店として、ウェブサイトのデザインと管理はまさに私どもの専門分野です。あなたのビジネスを21世紀に向かって跳躍させるために、今すぐ 408.432.8878 までお電話ください。

they will come.

## Industry Insights *continued...*

### Beyond Privacy Issues

Even if you are willing to give up your privacy rights, and even if you trust the police to never misuse their power, the key escrow described in the bills is probably the most dangerous thing that has been proposed by the Clinton administration since coming to office. Key escrow puts all of the privacy keys for every corporation in the hands of a small number of companies. Anyone who breaks into one of the companies could walk off with information that is phenomenally valuable.

The key escrow agencies would become the focus of intense interest of every computer-savvy criminal in the world. Being able to read the private messages of banks, high-tech corporations, drug companies, and so on would be so attractive, it would be quite logical for criminals to launch massive efforts to compromise the escrow agencies. With today's systems, you can only compromise one target at a time; when you put thousands of companies and individuals keys in one place, a successful attacker gets that much more with one effort.

### Much Worse Than Losing Your Car Keys

The security policies of the key escrow holders will be phenomenally important. A single undetected breach, from the outside or from within, will mean a potential disaster for every one of the agency's customers. Today, a bank can judge its security by how well it protects its keys; tomorrow, it will have to trust a third party to do as good a job.

An undetected breach in security means that the key owners would not know that their secrets weren't secret any more. However, a detected breach isn't much better. The agency has to contact every single customer and tell them, and issue them new keys. Those customers would then have to immediately start using the new keys and re-encrypt every document that used the old key. You can certainly assume that almost all the customers will choose a new key agency, so there will be a strong business incentive for an agency not to tell its customers when a security breach happens.

The problem is compounded by the fact that most companies already have huge numbers of files that use what might become illegal encryption. For instance, hospitals often keep customer records encrypted to prevent employees

from accessing them without authorization. All of these would have to be decrypted and re-encrypted using approved software. If the hospital's key is compromised at the escrow agency, it will have to decrypt and re-encrypt all the records again. The cost will be huge, and you can be sure most escrow agencies will have dis-

claimers that will get tied up in court (if the agency hasn't already gone out of business).

### It Doesn't Even Work

The sad part about the law is that it doesn't even help catch criminals, as long as they are even slightly smart. No self-respecting criminal will

# BEST VALUE IN BARCODE

## MICROSOFT ACCESS BASED TRACKING SOFTWARE FOR: INVENTORY • DOCUMENTS • LABOR ASSETS • CUSTOM MODULES

Since 1985, **Input Automation** has been a single source for all your barcode needs: Hardware, software, consulting, and system design. Our philosophy is based on two principles:

**High quality industrial products, and the best technical support available.**

I'm losing inventory!

purposely use software with crippled security if he can take an extra step or two to protect his communications—and that's exactly what criminals will do. This means that they can make it look like they're law-abiding citizens before the police get the keys from the escrow agency, but after getting them, it will turn out that the messages are unreadable.

There are many simple ways of pretending that you're complying with the law when you're not. The easiest is to use two keys: One that is not escrowed and one that is. You first use the unescrowed one on a message, then use the escrowed one on that message. This in effect wraps the first, impossible-to-read message in one that appears to be readable so that it looks like you are complying with the law.

Of course, once the police figure out that someone has done this, they will be pretty upset. However, the police will be in no better position than they are today, except for the few cases in which a criminal doesn't understand how to use this technique (or any of the dozen or so similar techniques that will work just as well). The FBI can probably trot out a very small number of cases where they might have gotten a conviction if they had access to someone's encrypted files but didn't, but that is not a good enough reason to force everyone to change the way the work to include the possibility of having all their private correspondence revealed.

*An undetected  
breach in  
security means  
that the key  
owners would  
not know that  
their secrets  
weren't secret  
any more.  
However, a  
detected breach  
isn't much better.*

## Losing Trust

The government keeps calling these "trusted agencies," but we have no significant track record for any of them about how much we should trust them. For instance, a well-known bank might become a key escrow agency, and you completely trust that bank not to release your key without a subpoena, just as much as you trust it not to release your bank records. That kind of trust isn't nearly enough, however.

How do you measure your trust that your escrow agency will survive all the expected attacks? How do you measure your trust that some insider at the agency won't secretly copy your corporate key and sell it? We know essentially nothing about the computer security at these trusted agencies, yet this will be crucial to our choice of which agency to use.

The reason we don't know about the security is that there are only a handful of these types of agencies right now, and they hold almost no valuable keys. If Congress goes ahead and passes a law that forces use of escrow agents, they're forcing all of us to use a system that is completely untested, yet very attractive to criminals. If the system proves to be very unstable, the American financial exchange system is at serious risk of disruption.

And, of course, it's likely that the people who are doing the destabilization aren't going to be using escrowed keys. ■

# INDUSTRIAL COMPUTER • SYSTEMS

## RACKMOUNT ENCLOSURE

- 8 to 20 slot enclosure
- Single or dual hot swap power supply
- Supports most PC/AT & ATX formats
- Shock-mounted drive bays
- Locking front panel access

## RACKMOUNT RAID ENCLOSURE

- Builds up to 8 removable disk drive modules
- Single or dual hot swap power supply
- 2 cooling fans

## RACKMOUNT MONITOR ENCLOSURE

- 14"/15"/17" monitor enclosure
- Dust gasket between monitor screen and non-glaring front glass
- Easy access to controls

## RACKMOUNT KEYBOARD

- Keyboard w/mouse holder
- Keyboard w/trackball

## WALLMOUNT ENCLOSURE

- 6, 8 Slot wallmount enclosure

## NEMA 4/12 WORKSTATION

- 14"/15" CRT or 10" TFT display touch-screen panel (optional)

## RACKMOUNT CABINET

- 40" to 77" w/wide range of accessories

- Intel Pentium® 75 to 200MHz
- MMX 200MHz support
- Intel 430VX PCI chipset, PCI 2.1
- AMI Plug and Play flash ROM BIOS
- Up to 128MB, 512K Pipelined on the board
- Dual USB supports future expansion
- Bootable from CD-ROM
- Disk on Chip Flash Disk-no need for extra software
- 486 to Pentium® Dual Pro w/SCSI, VGA on board

- 3-20 slots (ISA, ISA/PCI)
- Segmented backplane available
- PCI-PCI bridge chip support for 6 PCI PCIMG backplane

The MicroTimes Stock Index rose 431.39 points during September, continuing to perform better than the Dow Jones Industrial Average. Specifically, the MicroTimes Index posted a 4.05% gain for the month, compared to the Dow's 2.00% rise. The technology sector continued to outperform the broader indices as the Nasdaq Index beat all with a 97.57 point gain, a 6.17% boost.

Once again, hardware stocks dominated the winners in the MicroTimes Stock Index, with almost half of our of our sixteen hardware issues reaching new 52-week highs during the period.

Shares of Compaq Computer Corp. shot upward after the company's September 15th announcement of a limited-time promotional offer for customers purchasing a Netelligent 5226 Manageable Ethernet Switch between then and September 30.

"With this offer, we are enabling companies to get an entire network for the price of a switch. This package is ideal for first time network users or companies that may not have large IT budgets," said William "BJ" Johnson, vice president, Networking Products Division. "This offer is indicative of Compaq's goal: to make networking easy and affordable." Compaq shares rose \$9.31 during the month to close at \$73.31, up 14.55%.

Cyrix stock has been on a steady rise since the end of July, when they signed an agreement to be acquired by National Semiconductor in a stock transaction valued at about \$550,000,000. The agreement is subject to approval by Cyrix shareholders and is expected to be completed in November.

Each Cyrix common share will be exchanged for 0.825 of a share of NSM common stock. The companies said the transaction is intended to be accounted for as a pooling of interests and to qualify as a tax-free reorganization. Cyrix shares have gained almost \$10.00, roughly 42%, since making the announcement. Shares were up \$4.50, or 15.93% for the month ending September 25.

Informix was the Index's largest percentage loser in last month's trading, after the company announced that it would extend the restatement of the company's financials. Shares of the company fell 27.43%, or \$2.47 per share, to close the month at \$6.53. In August, the company said it anticipated that its 1996 financial statements would be restated to reflect adjustments to revenue that would decrease revenue and net income from previously reported amounts by an estimated \$70-100 million. Based on subsequent findings, the company expanded its audit to 1995 and also has now decided to restate certain types of revenue recognized from reseller channel transactions in both 1995 and 1996. As a result, Informix said the restatement of its 1996 and 1995 financial statements could exceed \$200 million and \$50 million, respectively, although the company said these amounts are rough estimates because additional time is required to complete the work and the extended audit procedures. ■

## A Security System For Your Laptop

Smart Clips Offers Security Against Stolen Or Forgotten Laptops

**Laptop users** have special problems when it comes to keeping their computers out of the hands of thieves. Precisely because notebook computers are so small, they are perfect targets. It is estimated that close to 200 computers *per day* are snatched at airports as unsuspecting individuals pass through the security checks.

Typically, the thieves work in pairs or even trios. One person goes through and holds the line up while your possessions pass through the radar machines. Already waiting at the end of the line, a partner in crime picks up your notebook, hands it off to a third person, and they both disappear into the crowd.

Over the years, there have been lots of security devices marketed to protect laptops and portables. Most of these involve securing the portable to a desk or other immovable object by a strong cable that fits around the leg of the table or desk. This type of security device is very adequate in many situations, but will do you no good in an airport security check.

Smart Clips is the first product I have seen that offers security for travelers afraid of having their laptop stolen or being accidentally left behind. Smart Clips is a pair of radio transmitters that sounds an alarm when the computer moves out of a designated range.

Here is how the device works: When you buy Smart Clips, you receive an identical pair of small gadgets, each smaller than a business card

but about three-eighths of an inch thick, each weighing about 2 oz., and each containing a radio transmitter. To set the distance at which the alarm will be triggered you turn on the first Clip, set it down and move an appropriate distance away before turning on the companion Clip. That is all you need to do.

The Smart Clips stay in constant communication and when one moves out of range, the alarm in both Clips is set off. Unfortunately, the alarm is not as loud as I would like. I suspect that a person intent on stealing your computer could disappear into the crowd before you would be able to catch up, but it makes chasing them easier. While security devices don't do much good on cars, a loud alarm on your notebook would probably frighten any thief.

Smart Clips have a maximum contact range of about 26'. You can set the sensitivity to as close as 3'. They are each powered by solar powered batteries and even in full darkness will operate for up to six days. A full charge requires about six hours, but the units will trickle charge whenever they are in light. The light source can be anything from the sun to a campfire. The battery itself should last from three to five years.

Another advertised feature of Smart Clips is to help you find misplaced items. If, for instance, you keep one Clip on your key chain, you can "page" the second Clip by pressing the page button. If you are within range, the misplaced or hidden Clip will sound off. I tried this out in my wife's purse and we were able to find it by walking from room to room until her purse beeped. The problem is that because these units are solar powered, you cannot really leave the unit on all the time unless it is in light. This means that I would have to know that my wife was going to misplace her purse and turn the Clip on in advance.

A number of useful accessories come with the pair of Smart Clips. The manufacturers have tried to make it easy to carry one Clip with you by providing key chains and clips for your belt or pocket. Velcro as well as adhesive fasteners are included for attaching the Clip to a notebook. Nylon tethers make it easy to attach one to your luggage.

# Your One-Stop Source for Industrial Computers

## Multi-purpose SuperSlim Panel PC

**NEW**

Advantech's ultra thin, ready to run user interface Panel PC is the state-of-the-art alternative to a traditional commercial PC. This compact PC mounts with ease, making it an ideal solution for a variety of applications.

### Applications

- POS/POI Kiosk
- Machine Control
- Factory Automation
- Medical Equipment
- Hospitality
- Interactive ATM
- and much much more

2.4 inch

### Features

- 10.4" TFT LCD Display (640 x480)
- 3x RS-232 and 1 x RS-232/422/485 communication capabilities
- 4 isolated input and output channels
- 10 Base-T Ethernet Interface
- Spill-resistant front panels (NEMA 4/12)

### IPC-610 Rackmount Industrial PC

- 14-slot ISA/PCI backplane
- Baby AT version available
- Supports two 5.25" and two 3.5" disk drives
- 250W Power Supply

### IPC-6806 Compact Wall Mount PC

- 6-slot ISA/PCI backplane
- Supports two drives
- Cooling fan with air filter
- 150W Power Supply

### MBPC-641 MicroBox PC

- 4-slot ISA-bus backplane
- Ultra compact for embedded control
- Cooling fan
- 65W Power Supply

### MiPC-S1 Workstation w/TFT LCD Display

- 4-slot ISA bus backplane
- Supports two 3.5" drives
- 640x480 TFT Color LCD
- 65W Power Supply

### CPU cards

- Pentium CPU cards with SCSI/VGA/LCD
- 486 CPU cards with VGA/LCD/LAN
- 386 with VGA/LCD

## Laptops *continued...*

While Smart Clips is marketed to notebook users, there are many other applications. This is indeed an ingenious product and I suspect that this technology will come into wider use because it is simple to use. Clearly, there is no reason they can't be used to help you from leaving valuables like cell phones behind. Attach one Clip to your key ring and the other to almost anything. Another suggestion is that Smart Clips can be used to make sure you don't lose your young children in a shopping mall.

While I can think of many uses for my Smart Clips, I wish it included a volume control setting. In places like a house, where Smart Clips can be used to find lost keys, the volume that the manufacturers have set is fine, but in a crowded place such as an airport, the sound may be easily drowned out.

If you are curious, but unsure, about the Smart Clips, it can be returned within fourteen days for a full refund. It also comes with a twelve-month guarantee. The people who market Smart Clips suggest that it is a luxury item,

which makes me feel that perhaps they have missed the point. They seem to suggest that this is the perfect gift for the person who has everything. Rather, I think that with a few modifications this might become part of everything that you need. It does come in a fancy case and you can get the solar lens covers with your company logo, but Smart Clips is priced relatively inexpensive so that almost anyone who travels could find it worthwhile.

*continued on page 37*

Smart Clips is a pair of radio transmitters that sounds an alarm when the computer moves out of a designated range.

# Computer Of The Month

## ChemBook 2600

**One of** the questions that comes up all the time is: "How much do you have to spend to get a good portable?" With top-of-the-line notebooks costing upwards of \$5,000, it is easy to get put off and resign yourself to doing without or settling for a used notebook. This month, I take a look at the ChemBook 2600, which has an entry-level price of \$1,650. It is designed around the notion that the user can upgrade their computer as the need arises.

The ChemBook 2600 weighs 6.1 lbs. with battery and measures 9.1" x 11.7" x 2". The least-expensive model comes with a Pentium 100MHz processor, a removable 1.4GB hard drive, 16MB of EDO RAM, a 1.44MB floppy drive, a 14X CD-ROM drive, and Windows 95. Upgraded CPUs are available, with the current top-of-the-line being a Pentium 233MHz processor with MMX technology (\$326 extra). Memory can be increased to 128MB. The floppy drive can be replaced with either an additional battery (\$85 for NiMH; \$180 for Lithium Ion), or extra hard drive. Many of these same accessories can fit into the battery bay on the left side of the computer. All together, the ChemBook 2600 provides a wide range of options.

In addition, it has a 12.1" dual-scan SVGA display with 800 x 600 resolution. An external display, which can be attached through the video port, will support up to 1280 x 1024 resolution. One feature offered by ChemBook that I have not seen on other notebooks is the ability to display over a television. I tried this and found it easy to set up. You simply plug a cable into a video input on the TV and into the TV port on the side of the ChemBook. You then make a change in the setup program of the computer and set the TV-to-video

input. While the setup took only a moment, the results are disappointing. The resolution on a TV simply does not compare with a good video monitor or the LCD screen. However, I would expect to see this capability become common as the various technologies improve.

The AC charger/adaptor can be inserted into the battery bay. This is especially convenient for users who work primarily at a single location and use AC power. It alleviates the usual awkwardness of the power supply unit on the desk or floor. It also is a recognition of the increasing number of users who work primarily in a single location and only seldom take their computers on-the-go.

The suspend program lets you save either to RAM or disk, which you configure in the setup program. The nickel metal hydride battery takes about ninety minutes to charge. This is considerably less time than many competing systems require. There are several ways to check the battery charge, including a button on the top of the

battery that shows the charge remaining by lighting up a series of LEDs.

The keyboard on the ChemBook is adequate and has a decent touch and feel. If you prefer an external keyboard, it is easily installed through the port on the side of the computer. This same port will accommodate a mouse if you don't like the built-in trackpoint. If you want to use both a mouse and an external keyboard, you will have to use a serial mouse because the port on the side works with either a mouse or a keyboard, but not both.

While you can get a built-in 33.6Kbps modem with voice (\$110), it may be easier to get a PC Card modem. The ChemBook comes with two PC Card slots, the lower one set up to take a Zoomed video card, and an infrared reader/port on the side of the computer.

This notebook has a full complement of multimedia ports, speakers, and features. There is a built-in microphone as well as a port on the side for either microphone or line-in. In addition to the speakers, there is a line-out port. The whole system is Sound Blaster Pro-compatible.

The ChemBook 2600 is a completely satisfactory notebook that has many features you would not expect in such an inexpensive computer. It works like a charm and has a one-year warranty as well as free technical support. ■

TELECOMMUTING • BY ROBERT MOSKOWITZ

# Telecommuting Technologies Create New Telecommunity Realities

## Telecommuting Technology Is Allowing Community-Building To Prosper Through Virtual Instead Of Physical Togetherness

**People tend** to be social animals. That's why we live together in families, and why families clump together into tribes, clans, villages, towns, cities, and nations. Until recently, all this building-up of communities was based on physical propinquity. You generally had to be there, near everyone else, or a community just couldn't happen.

From the very beginning, of course, the process was facilitated by technology. That's why, even 2,000 years ago, you couldn't hold an empire together without high-quality roads, and why 20th century America developed into a huge mono-culture and mono-market—a coast-to-coast community—under the influence of telephones and television.

Today's telecommuting technologies, however, offer something even better than roads and television—nearly instant two-way and broadcast communications. Because these technologies eliminate most of the old reasons for physical travel, telecommuting technology is allowing the human species' predilection for community-building to develop through virtual instead of physical togetherness.

As a result, we're seeing the formation and growth of online "Telecommunities," people clumping together electronically because they share the same interests, enthusiasms, passions, and purposes, and who can now spend lots of time in electron-

ic contact with those they consider of like mind—without the requirement of physical togetherness or the need for travel to make it so.

According to Dr. Charles Grantham, of the Institute For The Study Of Distributed Work in Walnut Creek, CA, a "Telecommunity" is simply a social entity made up of people who come together through shared interests, and who conduct a lot of their interaction electronically. Unlike individuals who merely dial into Web sites or consume other people's published materials, however, members of a telecommunity show a stable pattern of two-way interaction, basically talking to each other quite often and regularly.

seeking to offer its citizens a new dimension to their existing community via the Internet.

For people who already live near each other, like the citizens of Canby, OR, community interests naturally cluster around concerns of daily living, quality of life issues, local entertainment, and the like. When groups are spread out over thousands of miles, however, the telecommunities they form tend to start out around a different type of shared interest, perhaps more abstract, such as flower gardening or a professional concern.

"No matter how it starts, though," Grantham says, "it always ends up creating a larger and more dense social network for telecommunity members. And the larger and more dense your social network, the more friends you have to reach out to in times of trouble, and generally speaking the better off you are as a person."

Unfortunately, it's easier to talk about building a telecommunity than to actually do it. Everyone from the corner coffee vendor to the most prominent cancer doctor to the New Millenium's truest believer sincerely asserts they are "building a Telecommunity" on the Internet. Perhaps in a sense, they are.

But there must be a difference between a telecommunity based on a single commercial interest and a telecommunity that replicates and supports the complex web of social interactions we experience in our everyday lives.

**Today's telecommuting  
technologies  
offer something even better than  
roads and television—  
nearly instant two-way  
and broadcast  
communications.**

Only a portion of these telecommunities are geographically spread out. Many of the most vibrant telecommunities are electronic echoes and extrapolations of a physical community—like Telluride or Taos—which is consciously

## Telecommuting *continued from page 38*

Shouldn't there be more to holding citizenship in a telecommunity than logging in every once in a while? For a telecommunity to have any real meaning, shouldn't individuals feel a sense of belonging, a willingness to share knowledge and privileges with others, some degree of ownership of the ongoing activities of the telecommunity, and a loyalty that drives them not only to shape the emerging telecommunity to meet their needs and reflect their values and priorities, but also drives them to defend it against others who seek to bend it to their own—different—purposes?

Despite the theorizing and hype, the details of what is and isn't a telecommunity, and how to make one work, are still waiting to be developed and thoroughly tested in the field. Grantham is anticipating the rise of "cyberspace community organizers" who can help people with naturally shared interests transform an electronic conversation into a true telecommunity.

And progress has already begun. Today there are many signs that new and stronger telecommunities are emerging, surviving, and growing. While there are too many telecommunities to list here, a brief discussion of several prominent

and promising ones—including both compact and geographically diverse telecommunities—may prove enlightening.

### The Atikokan, Canada, Telecommunity Group

This is an association of volunteers dedicated to improving the remote and rural community of Atikokan's access to information networks, particularly the Internet, reducing the cost of accessing these networks, and increasing the local understanding of and individual usage of these networks. The group is developing a local

BBS (807/597-5265) and a home page on the Internet (<http://atikokanlakeheadu.ca/>). Check out <http://atikokanlakeheadu.ca/ATIKPIC.HTML> for some exciting pictures of the Canadian wild. Email contact is at [couch.t@nodn.com](mailto:couch.t@nodn.com).

**Unlike individuals who merely dial into Web sites or consume other people's published materials, members of a telecommunity show a stable pattern of two-way interaction, basically talking to each other quite often and regularly.**

## About Our Company

At Computer JAM we know that the customer should know what they are buying for and get it. We specialize and take pride in dealing with you as a customer and help you build a quality computer with high quality parts at an affordable price. And because we don't sell anything else, we back up our computers with a two year parts and life time labor warranty.

Computer JAM is not a large company, but a group of computer nerds who stay on top of the Computer World Today by testing today's newest products. We are very honest about the components we sell, letting you know our dislikes and recommendations. There are even some things we refuse to sell. We work with all our clients closely and because none of us can compromise you will always be treated equally by all of us. Our goal is to make this company grow and we know the only way this can be done is by all of us working together and giving you the best on our name knowing, face to face, customer service that is just so hard to find from any of the Big Guys out there. Good Computers Take Time, and We Take The Time To Do It Right! So you should too.

James McCow, Founder

## Telecommuting *continued...*

### City of Austin, TX, Telecommunity

A "Telecommunity Partnership Initiative" has been proposed by the Austin Telecommunications Commission as a catalyst for community and leadership cooperation during the 1997-98

fiscal year that will help in fulfilling a vision of Austin as a great 21st century American city.

Basically, the Initiative (discussed at <http://www.ci.austin.tx.us/telecom/intelcom.htm>) calls for the city to develop an Austin-based telecommunity that is inspired but not controlled by

technology. It proposes that Austin:

- 1) Deliver a network to people's homes, schools, libraries, hospitals, and businesses;
- 2) Ensure that individuals can send as well as receive video information and find other people's information easily;
- 3) Ensure that everyone, regardless of location, disability, or income is connected to and can use the network; and
- 4) Ensure that Austin's health, education, job and community services are available to everyone over the network.

The initiative proposes public debate on the shaping of this technology, and public action to create and enhance the physical community through the development of this all-new telecommunity.

## Attention Internet Users

**Server Colocation • T1 • ISDN • T3 • Frame Relay

### Blacksburg, VA

The residents of Blacksburg have banded together to develop Blacksburg Electronic Village (<http://www.bev.net>). It's intended to provide a mechanism for individuals to stay aware of activities, issues, and opportunities around them. The home page offers links to the history of Blacksburg, lists of its local businesses and organizations, health care information, library and local government services. In addition, the electronic village supports discussion groups on topics of local interest and importance.

### The Expatriate Forum

This is an electronic place (<http://www.expatriateforum.com>) for Americans living abroad, as well as expatriates of other nations, to get reliable information and services geared to their distinctive needs. For example, Expat Chat!—a collection of message boards organized into broad topics, discussions and messages, including Money and Personal Finance, The Expatriate Experience, conversations about five regions of the world, Travel, Announcements, and The Wander Inn—offers a place to meet others who live and work overseas, help those who are preparing to make the move, exchange info, and just plain network.

There are also discussions on "Jokes Heard 'Round The World," "Is There Life Out There for Expat Wives Other Than Shopping," "Food and Humor," "Reverse Culture Shock," "Connecting to the Internet on the Road," "How Do You Get Over Jet lag?" and "Top 10 Traveler's Ailments."

10. Purchase orders are welcomed and subject to approval.

## Telecommuting *continued...*

The goal is for expats, former expats, their friends and relatives to build and shape this online community. Their openness and willingness to swap tips and tales about living and working in a 'foreign' country is what will or won't make this telecommunity worthwhile.

A Jobs and Careers area offers both job postings and positions wanted sections. It will also contain discussions on general business issues (like hiring practices in various countries), career topics, and suggestions on "getting started" and "keeping busy."

For more information, contact: Jeff Freeburg, President, HR International, (617)575-0287, or email to: [jeff@expatforum.com](mailto:jeff@expatforum.com).

### **Santa Barbara, CA, Telecommunity**

The purpose of this electronic forum (<http://Telecommunity.santa-barbara.ca.us>) is to bring together all sectors of the community, to provide examples of and ideas on how local electronic networks may facilitate economic development, educational, non-profit, governmental and cultural programs, and to explore better ways to make this happen.

This "Telecommunity" tries to be an expression of the belief that working together to improve local online connections improves the ability to collaborate person-to-person, group-to-group, and sector-to-sector. The overall goal: To share over the Internet the process of nurturing the Santa Barbara area.

### **The Los Alamos Information Systems Technologies Telecommunity**

The LIST is intended as a Web-based prototype telecommunity, a part of the Department of Energy's Digital SuperLab project. The initial test community is composed of the developers of LIST. As LIST Telecommunity applications and enabling infrastructure support software are developed, they'll be placed on the Web and tested. Some features are available only to registered Telecommunity members.

The Web page includes such topics as: "What's New in the Telecommunity," "Tour the TeleCommunity," a listing of LIST members, a LIST community calendar of meetings and conferences, a LIST community bulletin board, various LIST library and educational resources, LIST community entertainment, and even

online shopping capabilities.

For more information about the LIST Telecommunity, email to [village@c3.lanl.gov](mailto:village@c3.lanl.gov).

### **Victoria, British Columbia, Canada, Telecommunity Network**

Victoria Telecommunity Network (<http://freenet.victoria.bc.ca/vifa.html>) is a community computing information system provided to the city of Victoria, British Columbia, Canada, at no cost to users, by the Victoria Free-Net Association. This Telecommunity site, separate from the City of Victoria's own Web site, is maintained by donations from local sponsors and private citizens and by many volunteer hours.

It provides such services as community discussion groups, Web space for community orga-

**Many of the most vibrant telecommunities are electronic echoes and extrapolations of a physical community—like Telluride or Taos—which is consciously seeking to offer its citizens a new dimension to their existing community via the Internet.**

nizations, links to the Greater Victoria Public Library (<http://www.gvpl.victoria.bc.ca/>) and the Vancouver Island Regional Library (<http://www.virl.bc.ca/>), and online databases.

For more information, email the Victoria Telecommunity Network at [hq@freenet.victoria.bc.ca](mailto:hq@freenet.victoria.bc.ca).

### **Taos, NM—La Plaza Telecommunity**

La Plaza de Taos telecommunity offers local residents and others such information as the community calendar, community services, education, government, a diabetes wellness connection, other health care and medical resources, local news and weather, links to local food and lodging services, and community arts and literature resources.

There are also links to recreation and entertainment, the "Storyteller of Taos," home and garden resources; transportation and utilities services, the telecommunity's virtual library and reference resources, lists of La Plaza users' homepages, various local business resources, and resources connected with society and culture, economic development, community networking, and travel and leisure.

Other services available to telecommunity users include banking and finance, history/social sciences resources, environmental and agricultural information, science resources, and employment opportunities.

The telecommunity Web site feature photos of local activities, and opportunities for users to add their own favorite links to the telecommunity's resource lists.

For more information about La Plaza de Taos telecommunity, email to: [feedback@laplaza.org](mailto:feedback@laplaza.org).

One curious aspect of all this telecommunity activity, Grantham points out, is that after a period of time people in telecommunities usually feel the need to get together face-to-face. Sometimes, they construct a local telework center that serves as a local gathering place. For telecommunities that are too spread out for local contact, people will often get on an airplane and go to an agreed-upon place to see each other.

"They feel," Grantham says, "the richness of their online interaction is enhanced by having some face-to-face interaction that supplements it." ■

Telecommuting continued...

## For more information on the concept of Telecommunity, try...

### CyberSociety: Computer-Mediated Communication and Community

Steven G. Jones, (Sage Publications, 1995). This is a fairly scholarly analysis of online communities, based on extensive research by the author. It mixes academic research with anecdotes and first-person experiences.

### Howard Rheingold's Home Page

URL: <http://www.well.com/www/hlr/index.html>

It has links to many interesting sites and resources, plus discussions of Rheingold's books and works of art. You might also want to check his links to virtual community resources, at

URL: <http://www.well.com/www/hlr/vircom/index.html>

### Center for the Study of Online Communities

URL: <http://www.sscnet.ucla.edu:80/soc/csoc/>

Offers information on how computers and networks alter people's capacity to form groups, organizations, institutions, and how those social formations are able to serve the collective interest of their members.

### Free-Nets and Community Networks

URL: <http://herald.usask.ca/~scottfp/free.html>

Offers many links here to free-nets and community networks (such as Big Sky Telegraph), plus other links to related ongoing conferences, archives, and important telecommunity documents.

### Big Sky Telegraph

A computer network in Montana that serves as a clearinghouse for education projects available on a variety of education networks, and which offers free training and access to citizens.

### The Millennium Report: Communications as Engagement

URL: <http://www.cdinet.com/Millennium/>

Discusses community revitalization through computer-mediated communications or telecommunity. commissioned by the Rockefeller Foundation, read this for an analysis of the community revitalization "movement" and how communications technologies are impacting it.

### The UTNE Café

email: [info@utne.com](mailto:info@utne.com)

A discussion area sponsored by the UTNE Reader magazine, this is an electronic place where ideas and community intersect. Expect to experience an electronic "gathering" of people who want to discuss and share ideas, perspectives, enthusiasms, skills and visions.

### Building Community in Cyberspace

URL: <http://www.netbiz.com/imp/rbaispeach/>

Presented by Philip A. Kratzer at the Renaissance Business Associates conference, September 21-24, 1995

### The British Columbia Community Networks Association

URL: <http://www.bccna.bc.ca/>

### Telecommunities Canada Inc.

URL: <http://www.tc.ca/>

Both locations reflect the work of people who are active in the telecommunities movement. There are also many links to other community-based computer networks.

# HSC Electronic Supply

Serving  
Silicon Valley  
since 1964!

...brings you a potpourri of high-tech goodies for the techno-tinkerer!  
For thirty years we have been your source for Silicon Valley exotica!

## Computer Case Close-out!

- Two styles to choose from
- High quality desk-top case made for Unisys
- Accepts modern ISA-VLB-PCI motherboards with PS2-style keyboard/mouse connectors. Removal of small metal shield allows use of regular 5-pin DIN style boards.
- Three front-accessible 5.25" drive bays, one with reducer for 3.5" drive (hardware kit included), two 3.5" bays inside
- Measures 16" x 6" x 15.5" - New, ninety day warranty

HSC#93457 Unisys case \$14.95

--Or--

- Bargain case for all those parts you took out when you upgraded...build a system for the kids with it!
- Accepts ISA-VLB-PCI motherboards with regular 5-pin DIN connector for keyboard
- Three front-accessible 5.25" drive bays,
- Measures 14.5" x 6" x 16.5" - New, ninety day warranty

HSC#16111 EZ-Data case \$12.95

Note: Above cases do not include "mini tower" type power supply or power switch. Both cases have push-buttons and will accept our HSC# 16994 power switch, \$1.95 ea. Power supply is available new (with switch) for \$45.00, or inquire about used/surplus power supplies in stock.

## Drive-bay Speakers!

- Save desk space, eliminate tangled wires!
- Twin-sound by Sound Minds installs in any 5.25" drive bay
- Built-in 4-watt amplifiers punch up sound
- Compatible with any sound card
- Independent volume controls for left & right speaker
- Front-mounted jacks for microphone, headphones

HSC#16277 \$14.95

## Joystick Extravaganza!

- Back in stock - joysticks for computer games!
- Suncom FX-2000, new in box, unbelievable value!
- Form fitting joysticks work with either hand
- Suction-cup feet anchor them for lightning fast action!
- New in box - 30 day warranty
- Hurry, they went fast last time we had them!

HSC#17008 Suncom FX-2000 Joystick \$4.95

## AT-style 200W Supply

- Replace that underpowered, noisy-fan unit today!
- AT-style power supply has switch on side
- Four large drive connectors, two small
- Standard IEC receptacle
- 110/220 VAC switchable
- New, 90 day warranty
- Similar to illustration

HSC#93453 \$12.50

## Hobby Parts Potpourri!

- Copper Foil Tape - .5" x 18 yd. roll, adhesive is conductive! \$4.95
- Karaoke-style microphone, good quality, black & gold \$2.95
- HSC#16156 \$2.95
- Small flexy solar panel - 1.6VDC @ 350mA - 6" x 1.75" \$5.95
- HSC#16133 \$5.95
- IBM multimedia condenser microphone, .25" stereo plug \$4.95
- HSC#15921 \$4.95
- Nidec 12VDC tiny squirrel-cage blower, 3" x 3" x 1.125" \$9.95
- HSC#16166 \$9.95
- Genuine IBM PS/2-style keyboard, 101 key \$14.95
- HSC#16218 \$14.95
- Arcade game joystick (not for computers), 4 switches, Heavy duty! Choose red, blue, green, or black handle \$6.95
- HSC#15227 \$6.95
- Coiled cigarette lighter extension cord, plug to jack \$2.95
- HSC#15640 \$2.95
- 5VDC CPU fan - smallest ever! 1.75" sq. only .25" thick! \$3.95
- HSC#16711 \$3.95
- Electroluminescent panel - 2.25" x 11" runs on 110VAC, consumes miniscule power, eerie green glow! \$8.95
- HSC#16084 \$8.95
- Handy 110VAC motor by Hurst Mfg. - 2.5" dia., 1.5" long, square mounting plate, 3/16" dia. shaft, 300 RPM \$14.95
- HSC#16669 \$14.95
- Dot Matrix LED - 5 x 7 bi-color, LTP2657AA, 1.5" x 2" \$2.95
- HSC#16414 \$2.95
- Electret Microphone element - 7/16" dia. with 4" leads \$1.25
- HSC#15031 \$1.25
- 18 ga. clear speaker wire, 1000 ft. roll \$29.95
- HSC#16297 \$29.95
- 22 ga. clear speaker wire, 500 ft. roll \$10.95
- HSC#16290 \$10.95
- GC Red GLPT insulating varnish, 2 oz. bottle \$8.99
- HSC#15419 \$8.99
- LED Grab-bag - approx 500 pieces, all types, red, green, yellow, IR, T1 3/4, T1, rectangular, super-bright, mini, etc. \$19.95
- HSC#16564 \$19.95
- AT&T phone dialer, stores four numbers, needs 9V batt. \$7.95
- HSC#16594 \$7.95

## Son of SwapBox!

- Just in time...we ran out of the regular SwapBoxes!
- IBM Compatible Reader/Writer for PCMCIA Cards with built-in 1.44 MB Floppy drive...fits in standard floppy bay!
- SwapBox Combo by SCM Microsystems for ISA bus
- Convenient front access for slots (not in rear of system)
- Dual slot, Type I, II or III, hot swappable
- Perfect for transferring data or hardware from laptops, notebooks or other PCMCIA peripherals to desktop PC's
- Directly supported by Windows 95 - no drivers needed!
- Includes DOS driver disk, manuals, cable, internal card
- New in OEM package (white box), 90-day warranty

HSC#16819 \$99.95

## PCI Video Accelerator Cards from Media Vision!

**PROAxc**

MEDIA VISION

- Blazing fast 64-bit graphic & video card
- PCI Bus card with 1MB RAM, expandable to 2MB
- Uses proprietary chipset (Alliance Semi ProMotion 6410)
- Resolutions up to 800 x 600, 64K colors with 1MB
- Up to 1600 x 1200, 256 colors, 800 x 600, 16M colors (requires 2MB) -- Upgrade chipset available, \$7.50
- Supports MPEG, AVI, and other full-motion video formats
- Up to 30 fps full-screen video playback possible (requires 90MHz or better Pentium)
- Win95, NT & 3.1 drivers and full manual on CD-ROM
- If you can not read CD's, diskettes are available, \$2 extra
- New in box and have a 90-day HSC Warranty

HSC#16807 New-Lower Price! \$24.95

## Hand Scanner Bargain

- Relisys Model HS410G 256 Grayscale Hand Scanner
- Up to 800 dpi (dithered) resolution available
- Brand new OEM pack (styrofoam tray)
- Includes manual, interface card, software diskette with drivers
- Software includes iPhoto Plus for Windows, READRIS OCR for Windows
- New, 90 day warranty - unit is similar to illustration

HSC#17009 \$14.95

## Absolute Last of the Red Hot Reno!

- Now at clearance price - Media Vision Reno:
- Consists of new external Reno CD-ROM drive, docking bay with SCSI2 port, AC Adaptor, cable kit, travel pouch, headphones
- Late Model version Uses AC adaptor (included) or AA alkaline batteries (not included)
- Double-speed 180mS drive is lightning fast!
- Drive detaches from docking bay, use with headphones as a portable personal audio CD player
- Great for Mac or IBM (adaptor bracket included)
- Mac software included
- SCSI Controller & software required for IBM use
- Brand new, 90-day warrant

Now - \$59.00

Available Separately:  
A. Macintosh Powerbook SCSI Adapter (HDI-30 to 25-pin D connector) HSC#15704 \$12.50 if purchased alone, or with purchase of Reno Kit, \$5.00

## Super Sounding Speakers!

Tired of the cheesy sound coming from those give-away speakers in your multimedia kit? Try upgrading to these sonic wonders...you'll have to hear them to appreciate the difference these will make without blowing your budget!

### GNT2002 2-way Bass-Reflex speakers

- 3.25" woofer, 1" piezo tweeter, ported enclosure
- 15W built-in amplifiers, 80W peak, 5.4W RMS
- 40 - 20,000 Hz, built-in SRS 3-D stereo
- Measure approx. 3.75" x 6.125" x 9.25" tall
- AC adaptor, audio cables included
- On-off switch, 3-D switch, bass, treble & volume controls
- Attractive off-white finish with grey grille-cloth

HSC#16884 \$34.95

### GNT3500 3-way Bass-Reflex speakers

- 4" woofer, 2" midrange, 1" piezo tweeter
- 23W built-in amplifiers, 120W peak, 20W RMS
- 20 - 20,000 Hz, built-in SRS 3-D stereo
- Measure approx. 6.25" x 6.5" x 9.75" tall
- AC adaptor, audio cables included
- On-off switch, 3-D switch, bass, treble & volume controls
- Attractive off-white finish with grey grille-cloth

HSC#16671 \$39.95

## SCSI Device Cases

- Horizontal style case, 9.5" x 2.5" x 10.5", 30 watt power supply, fan cooled, room for 5.25" drive, front access
- HSC#16185 \$29.95
- Upright Case, 3.5" x 5.5" x 8.125", has front opening for 3.5" drive, 20 watt power supply, no fan
- HSC#16559 \$24.95
- Deluxe quality case, 7" x 4.5" x 10.75", made for Olympus Optical, has 5.25" open front bay, SCSI diagnostic indicator on rear panel, 30 watt fan-cooled power supply, IEC power cord included. Assembled in USA.

### HSC#16575 \$49.95

- Small horizontal case, 6.5" x 2" x 8.5", for 3.5" drives, small 17 watt fan-cooled power supply (5V @ 1A, 12V @ 1A)
- HSC#16960 \$37.95

All cases are new, and feature 50-pin Centronics-style daisy-chain connectors, internal 50-pin cable and SCSI ID switch

## Sound Card with SCSI

- Mediavision ProSonic 16 sound card / SCSI controller
- 16-bit audio, 44.1KHz stereo sound
- MPU 401 MIDI emulation, Soundblaster compatible
- Internal SCSI CD-ROM port, microphone jack (mike not included), line-in, speaker jack, joystick port
- Includes driver disk, installation information
- OEM package, 90-day warranty

HSC#16683 \$29.95

## Skinny SCSI 2X CD-ROM!

- 1" high SCSI 2x (double speed) CD-ROM drive by Toshiba
- Model Number XM-4101B made for Sun Microsystems
- Mounts in regular 5.25" drive bay (with a gap at top of bezel)
- Lavender colored faceplate - made for laptop computer?
- Meets MPC-2 level specifications, rugged high quality drive!
- Standard SCSI interface, with drive select jumpers on rear
- New, in plain white box, 90-day warranty

HSC#16870 \$29.95

## Infrared Connections!

- IBM "Options" series ISA-Bus and PCMCIA card adaptors will add industry standard infrared communication capability to your desktop PC (with ISA slots) or notebook computer! (May not be Win95 compatible)
- Allows wireless connection to compatible notebooks, workstations, printers, and other peripherals supporting the Infrared Data Association (IrDA) standard.
- Also will emulate a COM port for cable-less hook-ups
- Communicates up to 115Kbps, or up to 1.152Mbps with the included TranXit Software.
- Operates over distances up to 3 meters (40 ft.)
- Includes Card, transceiver module, driver disk & book
- Both styles new in box, 90-day warranty

HSC#16483 PCMCIA Version \$19.95

HSC#16813 ISA-Bus Version \$19.95

Or a package deal...get both for \$29.95

# 66MicroTimes99 QUOTATION HOTLINE

**COMPUTER SHOPPING MADE EASY**

**The MicroTimes Quotation Hotline:  
It's Free, Easy and Convenient!**

**The Free, Convenient And Easy Way To Receive  
Pricing Quotations On All Your Computer Needs!**

To accurately process your quotation  
request, please print like the example  
below, without touching the box sides.

|   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| A | B | C | D | E | F | G | H | I | J | K | L | M | N | O | P | Q | R | S | T | U | V | W | X | Y | Z |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |   |

Please do NOT use a cover sheet. Only legible  
and completed forms can be processed. You  
may make copies of this form for multiple  
requests as needed.

Fax forms to: (800) 496-8008

Please shade circles like this > ●  
and NOT with check or crossed marks > ☒

You pick and choose the best prices/components available and save BIG BUYS!! Without leaving your home or office!!

**To ensure accuracy, please read the following information and instructions:**

1. All requests for quotation must use the form attached so that the Optical Reading software (OCR) can read it accurately. Do not send requests for quotation on your own letterhead because the software will not read any other text except for the text areas provided in the form.
2. Please fill in all the information legibly. By filling in the boxes neatly and legibly our OCR software can read your requests for quotation accurately. This will also ensure that your request is easier for advertisers to respond to your needs.
3. Do not cut inside the dotted line. Do not use a cover sheet.
4. If you are asking for multiple systems and/or computer products in the same category but with different specifications, please use additional forms. This will ensure that your requests for quotation will be responded to accurately and without any confusion from MicroTimes advertisers.
5. Be familiar with the particular computer products you are interested in. Be specific about the various products, system processors, speeds, hard drive sizes, features, as well as the particular configuration that you are interested in. This will ensure that you get an accurate response.

Whether you work for a large corporation or are buying for your personal use, the MicroTimes Quotation Hotline can help you gather pricing information quickly, easily and for free from a wide variety of computer resellers through the support of MicroTimes magazine.

Just fill out the form on the opposite page so you can receive information directly from our advertisers on the exact computer products you are interested in. Our advertisers will respond to your requests directly by fax, phone, mail, or e-mail...whichever way you choose.

**When You're Finished, Please Fax The Completed Form To:**

**1-800-496-8008**

## MicroTimes Quotation Hotline

Fax forms to: **1-800-496-8008**

**DIRECTIONS:** Please Do Not Use A Cover Sheet. Only legible and completed forms can be processed. You may make copies of this form for multiple requests. Copy at 100% of actual size, do not reduce in size. When you fax your form(s), you may want to note that the forms have been placed properly into the fax machine to avoid faxing the form's backsides. Shade or fill in any circles that apply and print neatly within the boxes without touching the box sides.

SMALL OFFICE/HOME OFFICE • BY BIRRELL WALSH

# A Creativity Machine

Visual Basic For Inspirations

**Last month** we talked about Visual Basic for Applications. This month we try it out on a specific project: Building a creativity assistant for Microsoft Word. And we will meet a new ally for sometimes-beleaguered MS Office users.

The time comes when you have to do something new. The old thing worked pretty well, but its time has passed. Now it is time to find a new thing to do, a new thing to make, or a different solution for an old problem. Trouble is, your brain is fried and you can't think too well of the old things, let alone of the new things...

You might, for instance, be a caterer who needs something to distinguish your work from everyone else's. What do you do? Look through more cook books? Hire a creative assistant? The big catering job is in three days, and the well seems to have run dry.

So this month we look at one way of priming the pump. Home-grown, home-made, and a bit of work. But it is free to anyone who wants to install it in MS Word 97—at least non-commercially. If you want to use it commercially, let's talk.

## A Home-Made Idea Generator

Creativity is the ability to see new arrangements for the familiar. Computers haven't gotten to the seeing yet—the consciousness remains human. But computers are excellent at providing random arrangements of data. As long as the data is in a form that they can read, computers can reach in and choose random chunks for presentation.

I always juxtapose ideas from different sources. I keep each source in a different file. One file should be made up of ideas that relate directly to the issue at hand. If you are a caterer

and the issue is cooking, it might be a text file of ingredients and cooking methods, written one per line for easy random retrieval.

*Basil*

*Sautéing*

*Deep Frying*

*Asparagus Beef*

*Shrimp Tofu*

*...and so on.*

The other file should contain things that have (apparently) nothing to do with the question at hand. There are lots of places to find such lists—the dictionary, a mail-order catalogue, the index of a text in another field.

The more rich the ideas are, though, the better. The intent is to make that second file a source of the best-quality conceptual approaches you can find.

For several years I have been using notes

**Because VBA works with the actual objects that run the Microsoft Office applications, you have to discover which one will pull the lever you want pulled. As the documentation for those objects is inadequate, you may be up late trying to find out just which command will pull the lever, and what syntax to use with it.**

taken from *Kevin Kelly's Out of Control*. If you haven't read this very wide-ranging book about the convergence of industrial design and biological forms, let me recommend it. Some of the entries in the early parts of this file are:

*algae soup*

*algorithmic search through Library of Form*

*all microbes as one genetically interacting*

*superorganism*

*almost predictability*

*alternative life...*

*extropy*

*fabric of traces*

*false id's*

*Fax Effect...*

*ideal mutation rate of .1 to .01*

*ill-defined problems*

*imbalance as a sign of life*

*implicit parallelism...*

## Cooking Up The VBA Program

I want a program that will present me with novel juxtapositions of ideas: one from my file of topical ideas about cooking, and one from the rich-idea file.

I will first need a function that can choose one line at a time from a text file. This function has all sorts of uses—you can use it to draw the winner in a contest, or to make random decisions in a game. Because it chooses a single line at random from a file, I call it "randline()." Then I can create a function to juxtapose random lines from two different files to make an idea. When I have that, I can present the idea to the user for acceptance or rejection.

Randline() turns out to be fairly straightforward:

**Public Function Randline(fname As String)**

# State-of-the-art web hosting

## Reliable & Fast

Fault Tolerant Systems, made up of Cisco 7500 routers & Silicon Graphics WebFORCE servers, connected to multiple backbones via fiber optic T3 lines.

## Responsive & Professional

Professional support by Internet specialists available 7 days a week, in multiple languages. Free domain registration within 24 hours.

## Reputable & Trusted

Hosting a number of major corporations and Fortune 500® companies. See our site for complete list.

1111 Civic Drive #395

Walnut Creek, CA 94596

# Business Solutions

Small Office/Home Office *continued...*

As String

'Prepare some variables to use  
Dim count, which As Integer

'Open the file  
Open fname For Input As #1

'Set a counter to zero  
count = 0

'How many lines in the file?

Do Until EOF(1) 'Repeat until file ends...

'Read next line

Line Input #1, textline

'Raise the counter

count = count + 1

Loop 'until file ends & we have the count.

'Shuffle the random deck

'by resetting the random

'number generator

Randomize

'Make a random number

'between 1 and count

which = Int((Rnd() \* count) + 1)

'Go back to the top of file

Seek #1, 1

'Now get a line to use

For i = 1 To which

'Read each line down

'to number which...

Line Input #1, textline

Next

'The last line you read

'is the random line you

'want, so return it to user.

Randline = textline

'...and close the file.

Close #1

End Function

The "Randline()" function opens the file and finds out how many lines it has—the Kelly file, for instance, is about 590 lines long. It then makes a random number between 1 and (in this case) 592. It goes back to the top of the file and counts down to the line with that number, and thus chooses one line at random from the file. It closes that file. When I use it on the file of cooking terms, it might come up with "deep frying."

The second function, "NewIdea()," uses the Randline() function to get a random line from each of the two source files. In this example, one is called "Kelly," and the other is called "yourfile." On my system they are both in a directory called "random," but you would of course modify these filenames so they reflected the names of the files you were using and where you were storing them. These two lines, joined by a "+", are the new idea.

Public Function NewIdea()

*continued on page 58*

## Network setup, installation & on site service

## Small Office/Home Office continued from page 54

'Prepare a variable

Dim idea As String

'Set it as an empty string

idea = ""

'Fill it with one random line

'from each of two different files

'separated by a "+"

idea = Randline("c:\random\Kelly") + " " +

Randline("c:\random\yourfile")

'And return the

'idea to the user.

NewIdea = idea

End Function

Of course any given new idea may not be helpful, so it is important to be able to cycle quickly through new ideas.

For that purpose, I have written a third procedure called "GetNewIdea." It uses the NewIdea function to produce a novel combination. It then presents the new idea to the user in a message

box. Because this is a VBA application, the message box appears right over the open Microsoft Word File. The box has three buttons. "Yes" will type the idea into the document. "No" will get another idea. "Cancel" closes the Message Box.

Public Sub GetNewIdea()

'Create some local variables

Dim idea, r, cr As String

Dim done As Boolean

'We'll want a Carriage Return in the

'middle of our message, so make a

'string that give us one.

cr = Chr\$(13)

'We'll need to know when we are done,

'and since we are not done at the start...

done = False

'Again and again, if need be:

Do

'Generate an idea.

idea = NewIdea()

'Offer the idea to the user and get their response (r).

r = MsgBox("How about:" + cr + " " + idea + " " + "?", vbYesNoCancel)

'Decide what to do, based on their response.

Select Case r

Case vbYes 'If they clicked "Yes"...

'...type the idea into the document.

With ActiveDocument

Selection.TypeText Text:=idea

End With

done = True 'and we'll be done.

Case vbNo 'If they clicked "No"...

'We will do nothing, but because

'the variable 'done' is still false

'we will go around again

Case vbCancel 'If they clicked "Cancel"

'Do nothing, but we are done.

done = True

End Select

'Repeat until they have accepted an idea or

## Small Office/Home Office *continued from page 58*

canceled.

Loop Until done

End Sub

Readers familiar with Visual Basic will find almost nothing in the scripts that is not familiar. Most of the code is pure Visual Basic. The

advantage is obvious: Thousands of users already know how to code in this language, and those who do not can learn quickly. Many of us have programs we have written in Visual Basic that can be reused in VBA. VBA makes possible a whole lot of leveraging.

The single exception is the code that types

the text into the Word document:

*With ActiveDocument*

*Selection.TypeText Text:=idea*

*End With*

While this is not much code, finding out just how to do this is part of the obscurity I wrote about last month. Because VBA works with the actual objects that run the Microsoft Office applications, you have to discover which one will pull the lever you want pulled. As the documentation for those objects is inadequate, you may be up late trying to find out just which command will pull the lever, and what syntax to use with it. But everything else is Visual Basic code—clear, relatively self-documenting, and familiar.

You need to be able to get to the Idea Generator quickly and easily. As a final touch, I wanted a button on a toolbar that would run the scripts for me. Fortunately, MS Word makes it possible to modify the toolbar, by going to the "Tools" item on the menubar and choosing "Customize." This brings up a "Customize" Box. Choose the "Commands" tab and then in the "categories" pane, scroll down to "macros" and choose it. On the right the various macros will appear. Select the macro "Normal.NewMacros.GetIdea" and (holding down the left mouse-button) drag it to the menubar and drop it on a toolbar.

This will give a button with the name "Normal.NewMacros.GetIdea"—accurate but unappealing. If you use the right mouse-button to click on the new menubar button while you are still in customize mode, a dropdown menu will appear. One of the choices on it is "Name." You can use that slot to rename the button to something more attractive like "Idea!"

You can install the idea generator for yourself and give it a try. You will probably have to spend time building a file of topics that are meaningful to you. But when you have done so, you will have a helpful advisor that puts together ideas for you.

## Suspended Disbelief And Idea Generation

To actually use it, you must suspend disbelief for a few moments. When the message box offers a new idea that seems nonsensical, you must act (for the nonce) as if it meant something.

I find it useful to write one paragraph interpreting the idea. If, after one paragraph of taking it seriously, the idea doesn't pay off, discard it. But the secret of invention is that the unlikely turns out to be useful. The idea generator gives you unlikely combinations—you need to find the use in them.

*continued on page 231*

## RIX 7-Series

- 13.3" 1024 x 768 TFT Display
- Intel Pentium® CPU (100 – 233MMX Technology)
- 4 MB Video RAM
- 512 KB L2 Pipeline-burst Cache Memory
- 20 x CD-ROM Drive
- 64 bit PCI Bus Video Controller with Graphic Accelerator
- DRAM Expandable To 128 MB
- Removable 2.5" Hard Drive
- Removable 3.5" FDD Interchangeable With 2nd Battery
- Built-in Wavetable Stereo Audio Support 3D Surround Sound
- 2 Type II or I Type III, PCMCIA Slots (Support ZV-Port & Card Bus)
- Infrared, Wireless Fast "IR" Interface
- Li-Ion Battery or NiMH Battery
- RCA Jack for TV Output

13.3" x 8.4"

- Intel Pentium® CPU (100 – 233MMX Technology)
- DRAM expandable to 72MB EDO.
- 512KB Synchronous Second Level Cache.
- 12.1" SVGA TFT LCD.
- 64-Bit PCI bus Video with Graphics Accelerators.
- 2MB Video Display Memory.
- I Type III + I Type II PCMCIA slots.
- Built-in 20 x CD-ROM Drive.
- Removable 2.5" PCI Local Bus IDE Hard Drive. Removable 3.5" F.D.D, Interchange with 2nd Battery.
- 16-Bit Sound Blaster Compatible Audio.
- IrDA and FIR, data transfer rate up to 4M bits.
- Built-in TrackPad.
- Li-Ion Battery or NiMM Battery.
- RCA Jack for TV Output in NTSC & PAL Systems.

ACCOUNTING • BY DAVID SIMON, CPA, AND JENNIFER R. CHERNISS

# Write-Up Our Alley

## A Stroll Through the Garden of Accounting Write-Up Software

### Accounting write-

up software is used to generate financial statements. It is specially designed for rapid entry of batches of transactions, and for keeping books and records for multiple companies. Write-up software is primarily employed by public accountants and bookkeepers, and by in-house accounting departments seeking presentation-quality financial statements without the hassles of full-bore, high-end accounting packages.

Write-up packages can import a client's accounting information from other applications, allow the accounting professional to make changes and finalize it, process a wide variety of financial information, and generate reports.

All write-up software performs the traditional function of "after the fact" accounting. A small business typically provides the prior month's books and records in the proverbial shoebox to a bookkeeper or accountant. The accounting professional then inputs the data, makes the appropriate adjusting entries, and generates an income statement, balance sheet, and other financial information. The ability to process payroll is another common feature, although many packages charge extra for payroll modules. Even at that, a small business can avoid the complexity and huge expense of general accounting systems such as AccPac, MAS 90, and Great Plains.

Usage of write-up software is no longer limited to outsourced bookkeeping and accounting services. Many small companies with accounting resources in-house rely on write-up software to generate professional-looking financial statements, as well as to generate more specialized reports and perform financial analyses. Yes, the

same presentation could be achieved with spreadsheet, word processing, or presentation programs. But the advantage of write-up software is its ease of use for specific purposes, frequently including predefined templates requiring little specialized knowledge and effort.

### Species Diversity

Because of the competitive environment in which they evolved, there is great diversity among write-up packages. Some have added enhancements such as payables and receivables modules. Other miscellaneous financial functions such as loan amortization utilities and financial ratio generation were gobbled up from related products and patched in, perhaps reflecting a product's ownership history more than real needs of any market niche.

*Usage of write-up software is no longer limited to outsourced bookkeeping and accounting services. Many small companies with accounting resources in-house rely on write-up software to generate professional-looking financial statements, as well as to generate more specialized reports and perform financial analyses.*

Many everyday software applications, such as word processors or spreadsheets, are largely similar from vendor to vendor. Compared to them, selecting write-up software is like shopping at a flea market.

This guide provides a few representative examples of write-up software packages to illustrate their range of functionality and some key differentiating features. The products mentioned here, and their publishers and contact information, are listed in the table on page \_\_\_\_.

A word about system compatibility: Long after the advent of Windows, most professional accounting packages persisted in their DOS incarnation. To this day, few packages have been developed specifically for Windows 95, and several with perfectly sophisticated functionality are available as DOS only. One may attribute this to the stodgy and conservative nature of accounting professionals, but this is a libelous assumption.

In fact, the legacy-system bent of this product category reflects the mission-critical nature of accounting operations and the relative instability of Windows. If an operating system crashes during entry of a large batch of transactions, or if finicky system resources are overwhelmed during key calculations, it can be quite burdensome to clean up the mess.

### A Write-Up Sampler

Tax and Accounting Software Corp. recently introduced a complete write-up package (Easy ACCT, \$1,590) that includes an accounts payable module and a credit card processing module. This enables users to process credit card transactions by modem and simultaneously record the transactions to the cash and accounts receivable accounts.

## Accounting *continued...*

Cougar Mountain Software is best known for ActPlus Accounting, a mid-range package used mainly by resellers, not-for-profit entities, and construction contractors. They have developed a write-up configuration (also ActPlus, \$400) incorporating the General Ledger module from ActPlus Accounting. It is configured to generate ratio and cash flow tracking reports, and more than forty financial ratios and indicators, including net working capital, inventory turnover, debt ratio analysis and return on investment information. As a separate add-on to the write-up package, Cougar Mountain sells a report writer that links with Microsoft Access

to present financial data in complex reports or across a Web-based network.

Purchase of the ActPlus write-up configuration alone is restricted to accountants. Configurations with additional modules (e.g., payables, receivables) are available to anyone and typically cost around \$1,000. Cougar Mountain envisions that the business customer will handle all the data entry in-house and then transfer files to their accountant to make adjusting entries and generate reports.

This arrangement, where client and accountant use the same master system and exchange compatible files, is promulgated by many vendors. Vendors may be happy to practically give away the software to accounting professionals, in hopes that their clients will buy the companion data entry modules at full retail prices. Indeed, as we

go to press, the \$400 configuration mentioned above is offered on special sale to accountants for a limited period for only \$99.

Computer Language Research (CLR) offers Ace Write-Up (about \$1,400), written for Windows 3.1, which emphasizes financial and accounting reports strictly complying with a host of highly technical accounting rules. Menu choices let the user instantly convert between alternative formats for reporting cash flows from operations. Even fonts are provided to ensure the professional appearance of accounting statements.

As with Cougar Mountain, write-up capabilities of CLR have somewhat limited compatibility with other packages. Import and export functions are largely restricted to other CLR products, so it won't be easy to use this system to generate financial statements if the data was entered in a competitor's accounting software.

Veritask, by Professional Design Systems Inc., is modestly priced (about \$600) and written for

**Because of the competitive environment in which they evolved, there is great diversity among write-up packages.**

## Business Solutions

### Accounting *continued...*

Windows 3.1. Originally developed by Software By Design, it was sold to Peachtree, who fiddled with it for a while and then sold it to Cold River Software. Finally, Professional Design Systems bought it from Cold River. As a result of its checkered past, Veritask's import and export functions work great with Peachtree accounting software, but not much else. As a standalone write-up package, Veritask is a functionally undistinguished program with a superior interface at an especially affordable price.

One of the better known programs is CLASS Plus, by Microtique. It costs about \$700 to \$1000, depending on optional features, and is strictly a DOS product. CLASS can import data from a variety of popular accounting packages that may have weak report generating capabilities, such as Quicken, Quickbooks, and One-Write Plus. From there, professional-quality financial statements, based on templates, are easy to generate.

CLASS originally made their name by developing a number of value-added features, including a loan amortization utility and bank reconciliation. Nowadays, utilities such as these have become so commonplace that it's hard to ascribe much value-added to them.

**Vendors may be happy to practically give away the software to accounting professionals, in hopes that their clients will buy the companion data entry modules at full retail prices.**

One of the priciest entrees, at well over \$2,000, is Write-Up Solution II, by Creative Solutions, Inc. It, too, is a DOS-only product.

Solution II's ability to integrate with other vendor's products is limited, and the report writer does not make it easy to custom design reports. It does, however, come with almost 100 predefined reports, so little report formatting is usually necessary. Designers of this program subscribe to the "Proprietary is Profit" school of thought, optimizing compatibility with a single client package, rather than sacrificing functionality for broad compatibility. Its companion product, CheckBook Solution (\$950), is intended to allow a business to handle payables and receivables in-house, then transfer data to the accountant for adjustments and reports.

Solution II is noteworthy because Creative Solutions did so much to pioneer proprietary write-up systems. It is still regarded as one of the more powerful write-up products. Although it is time-consuming to learn to use the report writer, its flexibility is outstanding. As adjustments are entered, the results are displayed instantaneously. Still, it may seem hard for savvy users to justify paying \$2,000 for DOS software, after having been acclimated to a graphical environment.

SCS/Compute offers DataWrite, a traditional write-up package. In 1995, SCS/Compute acquired Cogent Technologies, which offered a competing product, Work Papers Plus. Of course, having acquired the competitor, its product line was no longer competing, so SCS

## Intel Pentium II ® 233/266 /300

**INTEL Pentium II 233/266/300Mhz**  
Portland Model PD440FX  
**64MB of RAM 60ns EDO**  
Mitsumi 24X EIDE CDROM Drive  
**Sound Blaster 64 AWE**  
**Maxtor 5.1 GB Hard Disk IDE**  
Heat Sink And Fan for CPU  
**Matrox 4MB Mystique SGRAM**  
Keytronic 104 Enhanced Keyboard  
**Tower Case ATX w/ PS2 Bus Mouse**  
TEAC 1.44 MB - Microsoft Mouse

**1,940 / 2,040 / 2,540**

## Pentium Pro® 150/180/200MHz Iz

**Intel Pentium Pro 150/180/200Mhz**  
Intel Venus Model VS440FX  
**64MB of RAM 60ns (72 Pin SIMM)**  
Mitsumi 24X EIDE CDROM Drive  
**Sound Blaster Pro 16 Bit**  
**Maxtor 5.1 GB Hard Disk IDE**  
2 HS COM Port, 1P Built-in  
**Matrox 4MB Mystique SGRAM**  
Keytronic 104 Enhanced Keyboard  
**ATX Tower Case w/ 250 P.S**  
TEAC 1.44 MB - Microsoft Bus Mouse

**1,480 / 1,610 / 1,985**

## INTEL 100/133/200/200M/233M

**INTEL P5 100/133/200/200/233MMX**  
Intel LoneTree w/ 256 Kcache  
**32MB of RAM 60ns (72 Pin SIMM)**  
Mitsumi 24X EIDE CDROM Drive  
Sound card 16 bits  
**Seagate 2.1 GIGABYTE Fast IDE**  
2 HS COM Port, 1P Built-in  
**Diamond 64 PCI w/ 2MB Dram**  
Keytronic 104 Enhanced KB  
Middle Tower Case w/ 230 PS  
Teac 1.44 MB - Microsoft Mouse

**890 / 910 / 1,020 / 1,090 / 1,240**

## AMD K5 100/133/200/233MMX

**AMD K5 100/133/200MMX/233MMX**  
15ns PipeLine, Triton Chipsets  
**16MB of RAM 60ns (72 Pin SIMM)**  
Mitsumi 8X EIDE CDROM Drive  
Opti 16 Bit Sound Card PNP  
**Seagate 1.2 Gigabyte Hard Disk**  
IDE PCI W/ High Speed I/O  
**Diamond 64 w/ 2MB of Ram**  
Keytronic 104 Enhanced Keyboard  
Middle Tower Case w/ 230 PS  
Teac 1.44 MB - Microsoft Mouse

**680 / 720 / 890 / 970**

## Perfect Gift 486DX2-80VLB

**Dash AMD 486DX2-80Mhz VLB**  
256KB Cache MotherBoard  
**4 MB of RAM 70ns**  
IDE VLB 2HD/2FD w/ 2S/1P/1G Port  
TEAC 1.44 MB - Hires Mouse  
**Maxtor 540 IDE Hard Disk**  
Cirrus Logic VLB 1MB (no monitor)  
Mini Tower Case + 101 KeyBoard

**Wow! \$ 520**

## Pentium® 100/133/200/200/233M

**Intel P5 100/133/200/200/233M**  
15ns PipeLine, Triton Chipsets  
**16MB of RAM 60ns (72 Pin SIMM)**  
Mitsumi 16X EIDE CDROM Drive  
Opti 16 Bit Sound Card PNP  
**Seagate 1.2 Gigabyte Hard Disk**  
IDE PCI W/ High Speed I/O  
**Diamond 64 w/ 2MB of Ram**  
Keytronic 104 Enhanced Keyboard  
Middle Tower Case w/ 230 PS  
Teac 1.44 MB - Microsoft Mouse

**740 / 760 / 870 / 920 / 1,050**

## Basic AMD 486DX4-100™

**Dash AMD 486DX4-100Mhz VLB**  
256KB Cache MotherBoard  
**4MB of RAM 70ns**  
IDE VLB 2HD/2FD w/ 2S/1P/1G  
TEAC 1.44 MB Floppy Drive  
**IDE 1.2 GB IDE Hard Disk**  
**Cirrus Logic VLB 1MB**  
101 Enhanced Keyboard  
Mini Tower Case w/ 230 Watt P.S.  
Microsoft Compatible Mouse  
**Scocos 14" SVGA 1024x768**

**4DX4-100 \$620**

## NoteBooks

**8MB of RAM (expanded to 32MB)**  
Large 11.3" Viewable Screen Size  
Built-in Sound + Speaker + CDROM  
Free Carrying Case  
**1.0GB MB Hard Disk**  
Built-in Pointing Device  
\* P5 - 75 (Dual Scan) **\$ 1,920**  
\* P5 - 100 (Dual Scan) **\$ 1,950**  
\* P5 - 133 (Dual Scan) **\$ 2,040**  
\* P5 - 160 (Dual Scan) **\$ 2,120**

## Accounting *continued...*

created links between DataWrite and Work Papers Plus (discussed more later.)

Data Write provides a low-end, fairly simple approach for situations in which the business gives an outside bookkeeper the documents for data entry and needs only simple accounting reports in return.

### An Alternative Path

Many times prospective purchasers of write-up software discover that what they really need is its close cousin, trial balance software, and not a write-up package at all.

Trial balance software is even more stripped-down than write-up software. The starting point is the company's trial balance—a column of numbers that lists the balance of every account at a given point in time. With trial balance software, initially you either import the trial balance or enter it manually. From these preliminary balances, you can make adjustments, print financial statements or other reports, or even export the adjusted trial balance to another package, such as for tax preparation.

Trial balance packages tend to have especially good compatibility with complementary products from a variety of vendors. And they characteristically lack the “bells and whistles”—optional features not clearly related to the immediate task.

Computer Language Research acquired their trial balance product, Ace Audit, a few years ago. Unlike Ace Write-Up (discussed above), Ace Audit has a distinctively non-proprietary approach. Ace Audit can import data in ASCII and spreadsheet formats, as well as from other popular trial balance packages, and can export data to over nine different tax preparation programs. Ace Audit (which starts at around \$600) includes customizable financial statements and a graphics module, although the financial statement generator isn't as agile as Ace Write-Up's.

Cogent Technologies (owned by SCS/Compute) offers Workpapers Plus (mentioned above). This is the least-expensive package considered here, costing only about \$250. It is also one of the easiest with which to get up to production speed.

Workpapers Plus for Windows 3.1 will import data from Excel, Quatro Pro, and Lotus 1-2-3. It also imports data directly from a number of popular general ledger packages, but this requires purchase of an add-on module.

The program includes several predefined financial statements and reports. You simply choose the template and assign accounts to the appropriate classification. By clicking on-screen tabs, you can open different screens, for example, to enter adjustments.

Workpapers Plus generates more reports than Data Write. A business might do its bookkeeping in-house using Data Write, and then transfer the data to an accountant who uses Workpapers Plus to produce an array of reports, including cash flow statements and financial ratio analyses.

Write-up software doesn't normally command the media attention of romantic, high-profile, general accounting software, which is heavily advertised in the popular computer press. However, if you're looking for speed of data entry, superior reporting capabilities, lower price, and less trauma around installation and training, it's a class of accounting software worth a second look. ■

- 4MB SVGA MPEG Video Card with S3 VIRGE Graphics Accelerator
- 24X CD-ROM
- Sound Blaster 16 PnP
- High Fidelity 240W Speakers
- 56K X2 FAX Modem with DSVD Technology
- Mini-tower Model
- 104+ Keyboard, Mouse, Microphone
- MS Windows 95
- Compton's Encyclopedia
- MS Works, MS Money, 250 Games

**\$1445** Lease \$53/mo

## 233 CDFAX 32V

- Intel 233MHz Pentium® processor with MMX™ Technology
- 512K Pipelined Burst Cache
- 32MB RAM EDO
- 3.2GB EIDE Hard Drive
- 1.44MB Floppy Drive
- 15" SVGA Monitor .28dp
- 4MB SVGA MPEG Video Card with S3 VIRGE Graphics Accelerator
- 24X CD-ROM
- Sound Blaster 32 PnP
- High Fidelity 240W Speakers
- 56K X2 FAX Modem with DSVD Technology
- Mid-tower Model
- 104+ Keyboard, Mouse, Microphone
- MS Windows 95
- MS Office Professional 97

**\$1695** Lease \$69/mo  
**\$1895** with 17" monitor

## 233 CDFAX 64V

- Intel 233MHz Pentium® processor with MMX™ Technology
- 512K Pipelined Burst Cache
- 64MB RAM EDO
- 6.4GB EIDE Hard Drive
- 1.44MB Floppy Drive
- 17" (16.2" Viewable) Monitor .27dp
- 4MB MPEG SVGA Video Card with S3 VIRGE 3D Graphics Accelerator
- 24X EIDE CD-ROM
- Sound Blaster AWE 64 PnP 3D
- 500W Speakers with Subwoofer
- 56K X2 FAX Modem with DSVD Technology
- Mid-tower Model
- 104+ Keyboard
- Mouse, Microphone
- MS Windows 95
- MS Office Professional 97

**\$2195** Lease \$83/mo

## 266 CDFAX 64V

- Intel 266MHz Pentium® II processor with 512K Cache
- 64MB RAM EDO
- 6.4GB EIDE Hard Drive
- 1.44MB Floppy Drive
- 17" (16.2" Viewable) Monitor .27dp
- 4MB MPEG SVGA Video Card with S3 VIRGE 3D Graphics Accelerator
- 24X EIDE CD-ROM
- Sound Blaster AWE 64 PnP 3D
- 500W Speakers with Subwoofer
- 56K X2 FAX Modem with DSVD Technology
- Mid-tower Model
- 104+ Windows 95 Keyboard
- Mouse, Microphone
- MS Windows 95
- MS Office Professional 97

**\$2595** Lease \$95/mo

## Workstations and Servers

Shipped Serving™, an optional server and workstation factory pre-configuration and testing service from CAC, makes deploying your servers and workstations even easier. Ask your sales representative for details.

## 233M Workstation

- Intel 233MHz Pentium® processor With MMX™ Technology
- 512K Pipelined Burst Cache
- 32MB RAM (expandable to 128MB)
- 2.1GB EIDE Hard Drive
- 1.44MB Floppy Drive
- 15" SVGA Monitor .28dp
- 2MB PCI SVGA Video Card
- 16X EIDE CD-ROM drive
- PCI Ethernet Card
- Mid-tower Model
- 104+ Keyboard
- Mouse
- MS Windows 95

**\$1345**  
Business Lease \$46/n  
\$1545 with 17" Monitor

## 233M Professional Server

- Intel 233MHz Pentium® processor With MMX™ Technology
- 512K Pipelined Burst Cache
- 32MB RAM EDO (expandable to 128MB)
- 3.2GB EIDE Hard Drive
- 1.44MB Floppy Drive
- 14" SVGA Monitor .28dp
- 1MB PCI SVGA Video Card
- 8X EIDE CD-ROM drive
- 3Com 3C595 10/100 PCI Ethernet Card
- Mid-tower Model
- 104+ Keyboard, Mouse
- MS Windows NT 4.0 Server
- GE Service Protection Plus™

Four years Nationwide On-Site parts and labor warranty with priority around the clock Technical Support on an 800 number  
**\$1995**  
Business Lease \$73/mo

## Dual-Pro/200 Professional Server

- Dual Intel 200MHz Pentium® Pro Processor
- 512K Internal Cache
- 64MB RAM EDO (expandable to 1GB)
- 4GB SCSI Hard Drive
- Adaptec 2940 SCSI Controller Card
- 1.44MB Floppy Drive
- 14" SVGA Monitor .28dp
- 1MB PCI SVGA Video Card
- 16X SCSI CD-ROM Drive
- 3Com 3C595 10/100 PCI Ethernet Card
- Server Case w/300W Power Supply
- 104+ Keyboard, Mouse
- MS Windows NT 4.0 Server
- GE Service Protection Plus™

Four years Nationwide On-Site parts and labor warranty with priority around the clock Technical Support on an 800 number  
**\$3575**  
Business Lease \$131/mo

## 200 CDFAX N32M

- Intel 200MHz Pentium® processor With MMX™ Technology
- 256K Pipelined Burst cache
- 32MB RAM (Expandable to 72MB)
- 1.3GB Hard Drive
- 1.44MB Floppy Drive
- 12.1" SVGA Dual Scan Color Display
- 2MB PCI SVGA Video Card
- 11X CD-ROM drive
- 16 Bit Sound Card
- 33.6K FAX modem
- Zoomed Video Port
- NTSC/PAL Video Output
- 85 Key Windows 95 keyboard
- Touch Pad
- MS Windows 95
- Carrying Case
- NIMH Battery

**\$1995** Lease \$73/mo

## 19. SCANNERS

### ACER (flatbed)

AcerScan 300F Color ..... \* (185)

### AVISION

AV100 Color ..... 179

AV360C Color ..... 149

### DELFINA

WinFax Pro Scanner ..... \* (299)

### HEWLETT PACKARD

ScanJet 4C Color & Gray Scale w. Kit ..... 749

- Auto Document Feeder (C2525B) ..... 475

- Transparency (C2521B) ..... 635

ScanJet 5P Color/Grayscale ..... 385

### MICROTEK (flatbed)

Scan Maker III w. TMA & Photoshop OCR ..... \* (4399)

Scan Maker E3 600dpi, 24-bit Color, w. OCR ..... \* (195)

Scan Maker E6 1200dpi, w. OCR ..... 285

Scan Maker E6 Pro 1200dpi w. Photoshop OCR ..... 499

Scan Maker V300 w. Paperport ..... 225

Slide Maker 35T 1800dpi, 16.8M Color, w. ScanWizard ..... 725

Transparency Adapter for E3 / E6 ..... 285/285

### STORM TECHNOLOGY

Easy Photo Reader Parallel ..... 135

Easy Photo Smartpage Color ..... 175

### UMAX

Astra 600S w. Photo Deluxe ..... 175

Astra 1200S Win Deluxe ..... 375

Astra 1200S Win PS ..... 635

## 20. TAPE BACKUPS

### AIWA

TD-S3200 TR-3 Accelerator Card & Seagate BackUp ..... 155

Exec Int ..... 155

GD-B8000 8GB DDS-2 4mm SCSI Int ..... 649

### EXABYTE

Eagle TR3 (603003-004) 3.2GB Int w/o card ..... \* (145)

EXB-8205XL 8mm Dat. 3.5 - 7GB Int / Ext. .... 1275/1499

EXB-8505XL 8mm Dat. 7 - 14GB Int / Ext. .... 1850/2095

EXB-8700E 8mm 7 - 14GB Ext. .... 925

EXB-8700LT 8mm 5 - 10GB Ext. .... 675

### HEWLETT PACKARD

C1534 4mm Dat. 2GB SCSI Int ..... \* (549)

- w. Int Kit (C1525G) / Ext Kit (C1520G) ..... 725/845

C1536 4mm Dat. 2-4GB SCSI Int ..... \* (595)

- w. Int Kit (C1526G) / Ext Kit (C1521G) ..... 769/895

C1554 Dat. 24GB DDS-3 Int ..... 1045

- w. Int Kit (C1555A) / Ext Kit (C1556A) ..... 1399/1545

C1599 Dat. 8GB DDS-2 Int ..... 765

- w. Int Kit (C1528G) / Ext Kit (C1529G) ..... 965/1095

C5644A Surestore T4i 4GB Travan Int ..... 415

Colorado T3000 3.2GB Travan w. cartridge Int ..... 189

Colorado T4000S 8GB Travan Int ..... 359

### IOmega

Ditto 800MB Travan Int ..... 89

Ditto 800MB Travan Parallel ..... 139

Ditto 2GB Int / Ext ..... 129/179

- 2GB Tape / 3-pack ..... 19.95/57

Ditto 3200MB (QIC 3010/3020) Int ..... 209

Ditto 3200MB (QIC 3010/3020) Parallel ..... 239

### NOVASTOR (software)

Novaback CD Bundle (multi-platform) ..... \* (59)

### SEAGATE

Back Up for Windows 95 ..... 65

Back Up Exec for Netware WS 7.0 ..... 98

Back Up Exec for Netware Enterprise 7.11 ..... 845

Back Up Exec for Netware Single Server ..... \* (399)

Back Up Exec for Netware 1 Server 25-user ..... 315

Back Up Exec for Win NT Enterprise 6.11 ..... 795

Back Up Exec for Win NT Server 6.11 ..... \* (395)

Back Up Exec for Win NT Workstation ..... 189

### SONY

LanBacker 7000: 8GB DDS-2 w. ArcServe Single Server ..... 1095/1175

Internal / External ..... 1095/1175

WanBacker 7000: \*GB DDS-2 w. ArcServe Enterprise ..... 1695/1795

Internal / External ..... 1695/1795

WanBacker 9000: 24GB DDS-3 w. ArcServe Enterprise  
Internal / External ..... 2150/2175

### TAPE CARTRIDGES:

3M - 4mm 90M ..... 7.50

- 8mm 112M ..... 6.95

- MC3000XL (680MB) ..... 26.50

- Travan (800MB) TR-1 ..... 27.95

- Travan (1600MB) TR-3 / TR-4 ..... 29.95/34.95

EXABYTE - 8mm 112M, 5GB ..... 9.95

- 8mm 160MBXL (for XL drives) ..... 15.95

- 18C 8mm Cleaning Cartridge ..... 19.95

- EXMC 3000XL (1GB) ..... 26.95

- MC3000XL (680MB) ..... 21.95

HP - 92283B 4mm 90M (2GB) / 5-pk ..... 8.50/39

- 92283K 4mm Cleaning Tape 2-pk ..... 21.95

- 92300A 4mm 120M (4GB) / 5-pk ..... 14.95/69

- C1517A 4mm 125M (12GB) DDS-3 ..... 29.99

- C1572A 4mm 120M Autoloader ..... 119

- Travan for DT-1000 / 2-pk / 3-pk ..... 29.95/54.95/82

MAXELL - 4mm 90M Dat. .... \* (7.99)

- DC2120 (QIC80) ..... 9.95

- DC2120XL (350MB) ..... 16.95

SONY - 4mm 120M for DDS ..... 25.95

- 4mm 90M for DDS-1 ..... 8.95

- QIC-Wide 3010 (850MB) ..... 24.95

- QIC-Wide 3020 (1.7GB) ..... 27.95

## 21. VGA CARDS

3D Expression Plus 4MB PCI, PC2TV ..... \* (119)

3D Pro Turbo 4MB PCI, PC2TV ..... \* (169)

3D Pro Turbo 8MB PCI, PC2TV ..... \* (225)

All-in-1 Wonder 4MB PCI ..... \* (239)

Xpert@Play PCI w. 4MB / 8MB ..... 195/255

Xpert@Work PCI w. 4MB / 8MB ..... 179/235

### DIAMOND

Fire GL 1000 4MB PCI ..... \* (189)

Fire GL 1000 8MB PCI ..... \* (269)

Monster Stealth 3D 4MB PCI ..... 189

Stealth 3D 2400XL 4MB PCI ..... 115

Stealth 3D 3400XL 4MB PCI VRAM oem / reg ..... 165/185

Stealth 2500 2MB DRAM PCI ..... 59

Stealth Video 64 2MB VRAM PCI, upgradable ..... 109

Viper V330 4MB AGP oem ..... 185

### HERCULES

Dynanite 128 PCI 4MB SMDRAM oem ..... \* (109)

Stringray 128 3D 6MB EDO Reg. .... 249

### IMS

TwinTurbo 128P PCI VRAM w. 2MB / 4MB ..... 195/265

TwinTurbo 128P PCI VRAM 8MB ..... 395

### MATROX

Millennium II PCI 4MB oem / reg ..... 175/195

Millennium II PCI 8MB oem / reg ..... 265/309

Mystique 220 PCI w. 2MB / 4MB ..... 119/145

Rainbow Runner (for Mystique) ..... 195

Memory Upgrade (Millennium II):

- 4MB / 8MB / 12MB ..... 129/195/279

### NUMBER NINE

Imagine 128 Series II 4MB EDO PCI ..... \* (199)

Revolution 3D 128-bit PCI w. 4MB / 8MB ..... 275/365

Revolution 3D 128-bit AGP w. 4MB / 8MB ..... 279/369

### SPIDER

Tarantula 64 MK II 2MB VRAM PCI ..... 95

### OTHERS

Boca Voyage Movie Player Accelerator VGA ..... 285

Movie Plus 1100 MPEG Decoder ..... 199

Televiever / Televiever Plus ..... 109/169

Inident 8900 1MB ISA ..... 45

Trident 9680 1MB PCI ..... 39

Ivator Pro PC/MAC VGA to NTSC Scan Converter 119

Ivator Remote Pro VGA to NTSC Scan Converter 289

V-Mate Pro (video encoder : PC to TV) ..... 189

### Conferencing & Video:

AGFA: Ephote 307 Digital Camera ..... \* (295)

Casio QV-100 640 x 480 Camera ..... 599

Epson Photo PC Color Digital Camera ..... 245

Epson Photo PC-500 Color Digital Camera ..... 359

- w. PhotoPix LCD Monitor ..... \* (475)

Epson Photo Pix LCD Monitor ..... 175

Howard Video Camera ..... 295

Intel Smart Video Recorder III ..... 189

Internet Videophone + Video Capture ..... 135

Kodak DC20 Digital Camera ..... \* (175)

Kodak DC25 Digital Camera ..... \* (275)

Kodak DC50 Digital Camera Zoom Lens ..... \* (475)

Kodak DC300 Video Camera USB Port ..... 169

Quick Cam for Win / Quick Cam Color ..... 99/225

Snappy 2.0 (video Snapshot) ..... 195

Specom Suite Visions (color digital camera + s/w) ..... 195

Video Logic Captivator ..... 135

USR: Big Picture Camera + Capture ..... 229

USR: Big Picture Video Kit (capture + modem) ..... 225

USR: Big Picture w. Camera ..... 349

" After extensive comparisons of prices in the Bay Area I am happy to say that overall you have the Best Prices. I will be spending most of my computer dollars at your store. "

-- Tom Thornton, Redwood City

## SOFTWARE

### 1. PC SOFTWARE

#### ADOBE

Acrobat 3.0 ..... 189

Acrobat Capture 2.0 ..... 559

FrameMaker 5.11 for Win 32 ..... 546

Illustrator 7.0 for Win 32 ..... 365

- competitive upgrade ..... 265

Pagemaker 6.5 for Win 32 / S.E. (special) ..... 545/\* (295)

Photoshop 4.0 / S.E. (special) ..... 549/\* (899)

Premier 4.2 for Win - FD/CD ..... \* (499)

#### AUTODESK

Animator Studio 1.1 ..... 249

AutoCAD Lite 2.0 / for Win95 ..... \* (255)/409

Autosketch 2.1 for Win & Win95 ..... 89

#### Borland

C++ 5.0 for Dos, Win, Win32 - CD ..... 325

C++ 5.0 Developer Suite ..... 425

C++ Builder 1.0 Standard / Professional ..... 89/525

Delphi Developer 2 Kit / upgrade ..... \* (395/255)

Delphi 3 / upgrade ..... 499/249

Paradox 5.0 for Win ..... \* (99)

Paradox 7.0 for Win95 & NT / upgrade ..... 265/95

Turbo Assembler 5.0 for Win95 ..... 115

Visual dBase 5.5 for Win & Win95 ..... 269

#### COREL

Corel Draw 4.0 (2CD) oem / reg ..... 29/69

Corel Draw 5.0 - CD ..... \* (195)

Corel Draw 6.0 for Win95 - CD oem / reg ..... \* (59/299)

Corel Draw 7 for Win95 & NT - CD ..... \* (399)

- upgrade ..... 225

Corel Flow / Corel Flow 3 ..... \* (59)/129

Corel PerfectOffice Prof. - CD ..... 275

Corel XARA ..... 179

Lumiere Suite (video editing) ..... 69

Ventura 7 for Win95 - CD ..... 549

WordPerfect Suite 8.0 for Win95 ..... 325

- upgrade ..... 135

#### DELFINA

Comm Suite 7.0 for Win95 - FD / CD ..... \* (95/96)

Cyberjack 7.0 for Win95 ..... \* (48)

NetSatisfaction 3.0 for Novell 25-user ..... 755

WinFax Pro 4.1 for Network: ..... 599/1395/2650

- 10 / 25 / 50-user ..... 599/1395/2650

WinFax Pro 7.0 for Win95 - FD / CD ..... 79/79

WinFax Pro Starter Kit (server + 2 notes) ..... 265

#### IBM

Anti-Virus Desktop 2.52 oem ..... 24

OS/2 4.0 Warp Single : WS / Server ..... 195/539

Voice Type Simply Speaking 3.0.2 for Win95 ..... 49.95

Voice Type Simply Speaking Gold for NT ..... 89.95

#### INTUIT

Quicken Deluxe 6.0 - CD / FD ..... 59/58

Quicken 6.0 for Win3.1 & Win95 ..... 38

Quicken Parent's Guide to Money ..... 16

Quickbook 5.0 for Win - CD ..... 97

Quickbook Prof. 5.0 for Win - CD ..... 185

# The Making Of An Internet Startup—Part XIII

## Venture In The Valley

**My timing** is going to be off for this article. We haven't raised venture funding yet, but we're far enough along the process that I feel pretty comfortable sharing some thoughts with you.

### We're Not In Kansas Anymore

This isn't the first time I've raised venture capital. My former software company, T/Maker, raised venture in 1989. It took us about eight months to get a signed "Term Sheet"—an outline of the terms and conditions under which the investment takes place. It's only a six- or seven-page document, but getting to this point was (and is) the most difficult milestone in the venture process... as evidenced by eight months' worth of gaining weight at venture lunches!

Contrast 1989 with iPrint's experience in 1997, and you'll see why the venture process is *nothing* like it was in the '80s... or even the early '90s for that matter. At iPrint, we had a Term Sheet on the table in less than *two weeks* from our initial venture meeting. The Term Sheet was signed less than two weeks later.

Why is venture so different today? There are tons of reasons, and understanding them will help you navigate through the venture waters.

Certainly, we can't ignore the bull market's insatiable desire for IPOs (Initial Public Offerings). Especially *Internet*-related IPOs. Ever since the stock market replaced the money-market account as everyone's favorite "safe" investment, institutional investors have been forced to find an even more successful investment vehicle. As a result, money has been *gushing* into venture funds. Where attracting investors was once considered a tedious

process, venture firms are now raising new funds with their eyes closed. In fact, there are far too few venture capitalists to invest far too much money.

But most importantly, there are far too few "reasonable" companies to invest in, creating for the first time in the history of venture capital a "seller's" market of sorts. You haven't heard the phrase "vulture capital" for a while because those venture capitalists that wait to prey on struggling companies are simply getting their meal snatched away by a different breed of predator: Opportunists. These days, you snooze, you lose.

*Ever since the stock market replaced the money-market account as everyone's favorite "safe" investment, institutional investors have been forced to find an even more successful investment vehicle.*

*As a result, money has been gushing into venture funds.*

### A Good Story

Raising venture capital is different today for other reasons, too.

You'll hear this time and time again, and it's absolutely true: Venture capitalists invest in *people*, not products or ideas. After an incredibly successful decade of entrepreneurialism, the industry is bursting at the seams with amazingly experienced individuals, all wanting to jump back onto the roller coaster for "one more ride."

In other words, venture capitalists in the '90s

are investing in a talent pool that the VC's of the '80s only dreamt of.

But an experienced team has to have a "good story," too. And without a doubt, the Internet is a *great* starting point. Like the PC, the Internet will fundamentally change the way we all work and play.

So the trick is to create a good Internet story. I'd like to think that iPrint is such a story. For example, iPrint is up and running, is targeting an enormous traditional market, dramatically improves the way things are done in the traditional business, has a solid business model that can scale quickly, is actually generating real "product" revenues, and is establishing critically important business partnerships.

Put in venture parlance, we've eliminated technical risk and, due to our hyper-progress *and* the lack of any foreseeable online competition, we're minimizing the marketing and sales risks, too. Fundamentally, we're building something the commercial printing industry needs, which means we're creating a sound business asset.

All in all, combine real-world experience and a good investment story with too much money and too few people to invest it, and you end up in a venture capital world where it takes longer to write the business plan than it does to get the money.

And it doesn't look like it's going to slow down any time soon.

### There's No Free Lunch

Getting venture may be faster, but it's still a

# Business Solutions

## The Making Of An Internet Startup *continued...*

long, grueling process... a wild roller coaster that will turn your stomach inside-out even if you're prepared for the ride. Remember, it's normal for everything to be "insanely great" one moment, only to find the deal "falling all to hell" the next. Everyone thinks they're ready for this, but in

actuality, it's an emotional process.

Expectations are much different today as well. Getting a five-to-tenfold return on your money in a seven-year period was considered a grand slam in 1989. Today's long ball requires a ten-to-twentyfold return in a three-to-four-year

period, and this isn't even considered a bases-clearing homerun.

### Dead On Arrival

Be aware, however, that the venture process can be stalled. Thinking about creating a business that might get acquired? Think this will be attractive to a venture capitalist? Think again. With the IPO market as hot as it's ever been, acquisition—once a wonderful way to return shareholder value—is now considered a feeble "contingency" strategy at best.

Don't even think about suggesting a business based on advertising revenues... you couldn't pay a venture capitalist to sit through the presentation.

Thinking about raising a small amount of money? Unless it's a bona fide seed round (earliest investment to get you up and going) with a fund that specializes in seed investment, you'll run into that pesky oversupply/undersupply problem again: Too much money to invest and too few venture capitalists to invest it. A \$500,000 investment meant something in the '80s: Now a venture capitalist can't afford the time to even return a phone call for less than a \$1.5-\$2.0 million stake.

In the '80s, you actually had a slight chance of someone reading a submitted business plan. In the '90s? Just forget it. Because of the reduced timelines, "networking" plays a critical role in investing today. Unless you have an introduction of some sort, hell will actual freeze over before someone picks up your randomly submitted business plan.

*You haven't heard the phrase "vulture capital" for a while because those venture capitalists that wait to prey on struggling companies are simply getting their meal snatched away by a different breed of predator: Opportunists. These days, you snooze, you lose.*

## The Making Of An Internet Startup *continued...*

In the '80s, the Angel community was also called the “doctor” circuit because doctors had money and intelligence and a big desire to “play” in business. Unfortunately, the Angel investors of the '80s had very little business savvy, adding nothing to the business process but often distracting from it. Getting money from doctors was considered by many the

Still, no matter how sophisticated, being an Angel means being a “part-time” investor. This isn’t a disadvantage... this is great news for a lot of people having trouble with the traditional

*This series of articles chronicles the ups and downs of a new Internet business. You can visit iPrint, inc. at <http://www.iPrint.com> and email Royal at [Farros@iPrint.com](mailto:Farros@iPrint.com).*

*All in all, combine real-world experience and a good investment story with too much money and too few people to invest it, and you end up in a venture capital world where it takes longer to write the business plan than it does to get the money.*

## HOME STATION

- Intel Anchroge 430TX System
  - Intel Pentium CPU with Fan
  - with 512k Cache and Support MMX
  - Built-in EIDE & 16550 IO Ports
  - Built-in EPP & Floppy I/F Ports
  - 32MB 168pin SDRAM Dimm
  - Teac 1.44MB Floppy Drive
  - Quantum 3.2GB Ultra DMA IDE
  - Toshiba 24X IDE CDROM
  - Matrox Mystique PCI w/ 2MB
  - Yamaha OPL3 Audio Integrated
  - ATX Mini-Tower w/ PS
  - MS PS/2 Mouse and 104 Keyboard
  - Viewsonic G771 Monitor
  - MS Windows 95 and 55W Speakers
- Pentium 233mmx ..... \$1895  
 Pentium 200mmx/200... \$1755/1705  
 Pentium 166mmx/166... \$1645/1625  
 Pentium 150/Below..... \$1595

## OFFICE STATION

- ASUS Pentium 430HX System
  - Intel Pentium CPU with Fan
  - with 512k Cache and Support MMX
  - Built-in EIDE & 16550 IO Ports
  - Built-in EPP & Floppy I/F Ports
  - 32MB-60ns, 72Pin EDO Simm
  - Teac 1.44MB Floppy Drive
  - WD 2.0GB EIDE Hard Drive
  - Mitsumi 8X IDE CDROM
  - Diamond Stealth PCI with 2MB
  - ATX Mini-Tower Case w/ UL PS
  - MS PS/2 Mouse & 104 Keyboard
  - Sony CPD-200SX 17" Monitor
  - MS Windows 95 on CD
- Pentium 233mmx ..... \$1775  
 Pentium 200mmx/200 .. \$1625/1575  
 Pentium 166mmx/166 .. \$1515/1500  
 Pentium 150/Below ..... \$1475

## ENGINEERING STATION

- Intel Venus Pro 440FX System
  - Intel Pentium Pro CPU with Fna
  - L2 Cache Built-in
  - Built-in EIDE & 16550 IO Ports
  - Built-in EPP & Floppy I/F Ports
  - 64MB-60ns 72pin EDO Simm
  - Teac 1.44MB Floppy Drive
  - Quantum 2.1GB Ultra SCSI HDD
  - AHA2940AU Ultra SCSI Adapter
  - Matrox Millennium II 4MB WRAM
  - Toshiba 12X SCSI CD-ROM
  - ATX Mini-Tower Case w/ UL PS
  - MS PS/2 Mouse & PS/2 Keyboard
  - Sony CPD-200SF 17" Monitor
  - Microsoft Windows 95 on CD
- Pentium Pro 200/512K .... \$2885  
 Pentium Pro 200/256K ..... \$2410  
 Pentium Pro 180 ..... \$2080

## CAD POWER STATION

- ASUS Pentium II 4401X System
  - Intel Pentium II CPU with Fan
  - 512K L2 Cache Built-in
  - Built-in EIDE & 16550 IO Ports
  - Built-in EPP & Floppy I/F Ports
  - 64MB 168pin SDRAM Dimm
  - Teac 1.44MB Floppy Drive
  - 4.3GB Ultra SCSI Hard Drive
  - Toshiba 12X SCSI CDROM
  - AHA 2940AU Ultra SCSI Adapter
  - Explore 3000 AGP 4MB SGRAM
  - Creative Lab. AWE64 Sound Card
  - ATX Mid-Tower w/ UL PS
  - Yamaha YST-M15 Speakers
  - MS PS/2 Mouse & PS/2 Keyboard
  - MS Windows 95 on CD
- Pentium II 300 ..... \$2775  
 Pentium II 266 ..... \$2390  
 Pentium II 233 ..... \$2245

## DUAL PENTIUM-II 300MHZ SUPER-SERVER

- Dual Intel Pentium-II 300MHz Processors & Fans
- Air Dual Pentium II 440FX System
- PCI-ISA Bus and PCI Bridge
- Built-in 2940UW SCSI Adapter
- Adaptec Raid-Port Bus Ready
- Seagate 4.5GB Ultra-Wide SCSI HDD
- 128MB 168pin ECC/EDO Dimm
- Teac 1.44MB Floppy Disk Drive
- Toshiba 15X SCSI CD-ROM
- Matrox Millennium II 4MB WRAM
- MS PS/2 Mouse and 104 Keyboard
- 2X 300W Hot-Swap Power Supply
- Tower Case w/ 12 Bays & 4 Fans
- OS, Hot-Swap HDD and Raid is Customer Option and upgradable

\$5430

## HP LXe PENTIUM Pro 200MHz SYSTEM

- 200MHz-512k Processor
  - 64MB RAM
  - AIC7870 PCI SCSI
  - CDROM & VGA
  - 2.1GB Ultra-Wide
  - Keyboard & Mouse
  - HP 3 year On-Site
- \$10,380.00

\*\* Upgrade to MPS and Raid available \*\*

## IBM PC Server

- IBM E325 Starts
- Pentium Pro 200MHz
- 256K, 2nd. CPU Option
- CD-ROM, 1.44MB FDD
- K/B and Mouse

# Executive Search Firms Online

## Casting A Wider Net

### As businesses

rush to the Internet as a new venue for their operations, executive search firms are making cautious moves in the same direction.

At present, relatively few firms are operating online—as of today's writing, plugging in "Executive Search Firms" into AltaVista yielded only 157 hits, and of those, many are in relatively specialized areas.

Margot Jacqz, owner of Design Search and Executive Recruiters, says that the Web is helpful in her business because she can learn a lot about new or prospective clients by visiting their Web sites.

"I see the move to the Web clearly in my small sector of design specialists, in that several competitors have Web sites and publish email addresses in their advertisements. The Net is natural for communicating and reviewing 'portfolios' on the Web. The trends for us recruiters will follow the trends in the industries we serve."

### The Online Headhunter

Patrick D. Bryan is the vice president and CEO of Corporate Personnel, a search firm incorporated in December, 1995. He describes the company's mission as a bit different from the public perception: "The public has difficulty grasping that we don't find people jobs. We represent our clients and other recruiting firms in their search for qualified candidates."

Corporate Personnel's Web site (<http://www.corp-pers.com/resume.html>) has been up since mid-April, 1996. Says Bryan: "Our site is driven entirely by client requirements and requests for assistance from other recruiters. We are constantly undergoing a metamorphosis as the labor market changes."

"The decision to launch our Web site was driven by the lack of opportunities for us to post our job listings on the Internet. All the sites we found were either membership organizations or posting services—too expensive. Since that time, we have accepted split offerings (50/50 commission) from other recruiters.

"In January of this year, we became strictly an Internet business. We no longer accept resumes through fax or snail mail. They have to be turned in as text file attachments through email or through our Web forms."

The Internet-only aspect of the business has changed the way it works with job seekers. "We receive so many resumes that we do not have time to edit anything. If it does not conform to our requirements, we have about four different canned rejection messages that we send out."

Asked about trends in the overall industry, he says: "It is difficult for us to identify trends, since we are totally out of step with the rest of the industry. We refuse to use UNIX-type search devices which will find 'reports directly to the CEO' when you are searching for a CEO position."

### The Other Side

Arnold Huberman, Inc. is an executive search and management consulting firm specializing in the placement of public relations and corporate communications professionals. Its Web site, <http://www.huberman.com>, has been up and running since May 1996. The company opened its doors in 1985.

**ARNOLD HUBERMAN ASSOCIATES, INC.**  
*Executive Search And Management Consultants*

We are an executive search firm specializing in the placement of public relations executives for both agencies and corporations.

contact us

you can use  
current job listings

Arnold Huberman himself, the firm's president, explains: "Our area of expertise crosses all industries, including consumer products, financial and professional services, lifestyle health care and high-tech industries (and more).

"Since our specialty is public relations recruiting, we try and monitor developments in the field. When the concept of email press releases first began to take hold, we realized we needed a presence within the framework of the new technologies. A Web site seemed a perfect solution."

Huberman admits, however, the Web site is more for the benefit of the candidates than for the executives seeking them. "The majority of senior level executives use the Web very little. We, therefore, targeted the site to potential job candidates.

"There are several benefits to this: It allows us to reach a worldwide audience at virtually no cost; it allows us to maintain an up-to-date job posting section; it reaches a far broader candidate-base than traditional recruiting techniques would ever uncover, and it allows for the reception of email resumes. Potential clients view the

# Business Solutions

## Executive Search *continued from page 88*

site as a plus. The fact that we are current and invested the time and energy to create it gives them a small measure of added comfort. We have established ourselves as cutting-edge recruiters who use technology to improve the quality of the work."

While he concedes that traffic is relatively low, Huberman points out that he's operating within a narrowly defined specialty: "Public relation professionals are a small universe."

## Pioneering Perspective

Elaine Wright, marketing manager of Texas-based King Computer Search, Inc., which provides both recruiting and consulting services, says: "Since 1983, this company has provided mission-critical talent to build some of high-tech's most successful companies."

"The impact of the Web/Net on our firm has been significant. We were probably pioneers on the Internet when we were one of the first firms to post job opportunities to newsgroups in the 1989-90 time frame. The response was exceptional in light of the fact that our target candidates were the first Internet aficionados."

"Since then, our firm has made a strategic commitment to the Internet and the Web. Our site is <http://www.kingsearch.com>. We have led the wave of career-posting venues. The Web has definitely helped leverage our resources to expand rapidly geographically, facilitating communication with candidate and clients through the state and the world. The Web transformed our business from a regional one to an international one overnight."

She adds: "The Net is a very important tool for helping make an initial connection and turning it into a placement. We work extremely closely with our clients and candidates to identify and communicate needs—both tangible and intangible. Most of the time, however, we finesse the nuances of closing only through verbal and/or in-person exchange."

## No Substitute For Human Contact

While both the Web and the Net as a whole have become accepted as useful marketing tools by the recruiting industry, neither can provide a complete package for any business. That still requires the personal—and very human—touch. ■

# THE BEST OF TIMES

## FOUR VENTURE CAPITALISTS ON HIGH-TECH INVESTING IN 1997

BY MICHAEL ROBIN

**T**hroughout human history, changes in how we record and share information and how we communicate have propelled periods of dynamic social change. Communication technologies, such as the printing press, telephone, radio, and television, have fostered revolutionary changes across almost every aspect of our lives. Broad access to information, wide dissemination of knowledge, and the free and open exchange of ideas are critical components for building not only a democratic society, but also to fuel further technological and economic development.

In the American colonies in the 1700s, for instance, pamphlets, newspapers, and books embodied the power of that era's central communication technology—the printing press. Access to these tools meant that the views of the less powerful, those who dared to voice their disagreement with the King, could be shared and discussed with more people than ever before. It also led to the growth of new businesses, providing jobs and encouraging the growth of a literate, knowledgeable population.

Individuals like Benjamin Franklin, himself an editor, inventor, and philanthropist, understood the potential economic and social impact of nurturing new businesses that utilized these communications tools. In *Franklin of Philadelphia*, Esmond Wright observes that “what [Franklin] did not invent he perfected—and advertised. The goal was never speculation for its own sake but action, cures for smoky chimneys, or whatever other ills could be rationally cured.”

Franklin invested in a series of printing businesses that would ultimately put this empower-

ing technology into the hands of more people, encourage and nurture new businesses, and support the families of those who worked in this emerging industry. In his autobiography, he explained,

“The Partnership of Carolina having succeeded, I was encourag’d to engage in others, and to promote several of my Workmen who had behaved well, by establishing them with Printing Houses in different colonies, on the same terms with that of Carolina. Most of them did well, being enabled at the End of our Terms, Six Years, to purchase the Type from me; and go on working for themselves, by which means several families were raised.”

In the US today, new communication technologies, such as the Internet, are again changing how we create and share information, as well as creating new jobs and businesses. Similar to Franklin who provided the initial capital for new printing ventures, venture capitalists are providing capital and knowledge for many new companies.

The combination of today's rapidly developing digital communications technologies, a modern venture capital industry, and an expanding US economy has enabled venture capitalists to fund an increasing number of promising ventures. According to a recent survey conducted by Price Waterhouse, total investments in the second quarter of 1997

exceeded \$3.18 billion, a 13% increase over the \$2.8 billion reported in the second quarter of 1996. Likewise, a total of 697 companies received financing in the second quarter of 1997 compared to 565 companies in the same period last year.

The Price Waterhouse survey also shows that over half of all investments were concentrated in two sectors: communications and software & information. Together they accounted for 346 companies and \$1.6 billion.

Not surprisingly, Silicon Valley continues to be the perennial leader. Of the 697 companies attracting venture capital, 190 were based in the Valley. When this is combined with the 20 companies in San Diego and 34 in LA/Orange counties, California received almost 35% of all venture capital investments in the second quarter of 1997.

For *MicroTimes*' 9th Annual Venture Capital issue I interviewed four venture capitalists. Although they all invest primarily in early-stage, high-tech companies, each represents a unique place on the venture capital landscape: Russell Siegelman is a partner at Kleiner Perkins Caufield & Byers, one of Silicon Valley's most influential venture capital firms; Timothy Draper, managing director of Draper Fisher Jurvetson is following in the venture capitalist footsteps of his father and grandfather; Ray Rothrock is general partner at Venrock Associates, the investment arm of the Rockefeller Family; and Jim Breyer is a managing partner at Accel Partners, representing venture investments of major financial institutions, corporations, and other venture capital firms.

## Russell Siegelman

### Partner

### Kleiner Perkins Caufield & Byers

Kleiner Perkins Caufield & Byers has long been one of the hottest high-tech venture capital firms. Its name appears on a long list of big deals, including Ascent, Netscape Communications, Sun, Lotus, Compaq, America Online, and VeriFone. Its philosophy is not merely to provide access to capital, but access to people—"a partnership with experienced industry leaders who recognize, challenge, and even improve on a brilliant idea."

KPCB invests in early stage high-tech companies in the life and information sciences area:

In information sciences it focuses on Internet, enterprise, telecommunications, and consumer areas. In life sciences the focus is on drug discovery, medical devices, and health services.

Russell Siegelman is one of the newest members of the team at KPCB, having joined about a year ago. Before joining KPCB, he worked for seven years at Microsoft and does not deny having a "Microsoft perspective." From this email interview, it is clear that he brings more to being a venture capitalist than this perspective. As Siegelman notes, he offers "a lot of relevant experience and knowledge about online service, online content and the Internet from the point of view of trying to do large online service and content projects."

**What does a venture capitalist do? What does a typical day for you look like?**

I think our main role is to enable and support entrepreneurs to do their best, which is to build businesses and in the process create jobs and drive an important part of our economy. We pride ourselves in helping to create enduring businesses, and at KPCB we have had a history of being able to do that, but everything we do is to enable and support that entrepreneur and team—they deserve all the credit.

What that means on a day-to-day business is: go to board and management meetings as an advisor on business, technology or financing topics; meet with entrepreneurs to discuss their ideas and plans; meet with my partners to share ideas, review portfolio companies, and consider new investments; recruit management teams and generally helping with recruiting are the things I spend the most time with. I spend more than 70% of my time with portfolio companies

and maybe 20% looking at new investments. And I try to spend time with entrepreneurs, even if we are not investing, it gives me a view of what's going on in the market, and because I like to be helpful. You never know when one of your companies will want to work with one of these entrepreneurs, or when you will have a chance to invest at some other time with that person.

**What do you see as the parallels and/or differences between today's growing Internet-related investment environment and the early 1980s, during the initial growth of the personal computer?**

In both cases there are large platform shifts, which create enormous opportunity. We think the Net is probably bigger an opportunity than the PC shift. One difference is that maybe today

people are more aware of the importance of platform changes and the leverage a company can get as their platform becomes widely adopted and as a result becomes a de facto standard. Microsoft was so successful at this, their success has been so studied, and "open" has become a mantra for customers, that today it is very difficult for any company to create a de facto standard. The market is too competitive and competitors and customers are too aware to let any company

easily control platform standards in an important market area. Also the telecom infrastructure, an important enabler of the Internet revolution, is more regulated and has no Moore's Law driving its improvements, unlike the PC revolution.

**Could you explain what you mean by there is "no Moore's Law" driving the telecom industry?**

Moore's Law refers to the doubling of capacity/functionality or corresponding halving in price every 18 months that drove the fantastic development in semiconductor chips over the last couple of decades. At its core this dynamic is driven by physics, the ability to pack more and more circuits on a chip. The telecom infrastructure is not driven by a similar dynamic. The constraints on telecom growth involve putting more fiber, access nodes, and other physical devices into the ground, homes, and buildings. Or putting satellites in the sky. None of these involve the kind of driving force that enabled Moore's Law. Sure there are tremendous advances in telecom technology and they will help, but at the end of the day there isn't the same kind of price/performance curve which enhances the functionality and lowers the price of the most fundamental unit of computation. And of course, then there is regulation, which in

some cases holds back the deployment of the necessary physical resources to below the level market forces might drive them. I am not bemoaning these constraining factors in any way, but simply mentioning what has been mentioned by many other commentators, that the telecom infrastructure isn't enabled by the same doubling dynamic that the semiconductor (and thereby downstream businesses, like PCs) has.

**How has the explosion of the Internet changed or influenced the type of companies you invest in?**

I've only been here for a year, but I suspect the Internet has changed our focus to some degree. I doubt there was an investment in electronic commerce, until Amazon.com, in the history of KPCB partnership. But we have done a couple and continue to be interested in this space. Similarly for online consumer media. Java, a separate phenomenon, but related to the Net, has also created some changes for us.

**Last year, KPCB launched its Java Fund that invests only in Java-related companies. One year later, how does the investment landscape look? Has Microsoft's attempt to do its version of Java changed the mix of companies you are considering?** The reception to Java and to the Java Fund has been extraordinary. There are over 400,000 Java programmers today and growing rapidly. There have been over a million downloads of Java Developer Kits and more than two-thirds of the Fortune 1000 are in pilot or deployment of Java implementations.

At KPCB we received over 500 business plans in the first year of the fund—an extraordinary number for a new technical platform. From our vantage point, there is something big happening and our feeling is that it will only continue. There are plenty of issues around the Java platform, regarding standardization, etc., but we don't really take those into account when making an investment. If the company has the right plan and technology, then we take it as a given that they will be able to navigate the standards waters, just like every other software company has to.

**Are there any areas that you are avoiding?**

We aren't big fans in investing in tools, specifically development tools. With a new platform, such as the Net and Java, there is bound to be a rash of new start-ups doing tools to enable development on the platform. Many of these have great technology, but it is hard to build big businesses in the tools area, and even harder to make money. Tools start-ups grow rapidly at first, but then flatten out as the platform matures, vendors compete and bring down prices, and they often get sold to more mature companies. This is one area we have tried not to run with the crowd and have avoided investing.

*continued on page 100*

# Internet Road Rage? Don't get mad. Get GeoNet.

Ask about our NetPartner reseller program.

**FREE T1 Internet account activation. FREE Cisco equipment use.**  
**And screamin' T1 speed for just \$1,195 a month!**

**Get screamin' T1 Internet access for your business** at an unbeatably low price – just \$1,195 a month for all the speed you can handle. Sign up for a **GeoNet** T1 today and we'll give you **FREE** account activation, **FREE** equipment use, and conduct a **FREE** security audit of your network.\* That's a savings of \$2,500, just for signing up!

Of more than 4,000 ISPs in the country, **GeoNet** is one of only 30 Tier 1 providers offering **direct** access to the Net. Don't suffer a slow-poke, dial-up, stop-and-go connection to the Net a minute longer. Call **GeoNet** today.

**Need a little more? Try a T3 at up to 45 Mbps.**  
**Need a little less? Ask us about Frame Relay.**

#### **GeoNet vs. other Tier 1 Providers – The facts:**

- **GeoNet** has officially been clocked at **twice the speed** of the average T1 connection for all Tier 1 providers across the country.
- **GeoNet** costs an average of **\$800 a month less** than other Tier 1 providers.
- **GeoNet** was ranked the **#1 price/performance value** for T1 Internet access in all of Northern California!

**GeoNet**  
Communications

**Business Internet Connections. Web Hosting. [www.geo.net](http://www.geo.net)**

\*Offer includes free use of a Cisco router (model shall be determined by GeoNet), a CSU/DSU, connector cable, and transceiver for the term of the contract with GeoNet. Equipment provided as part of this offer is and shall remain the property of GeoNet or GeoNet's lessors. Offer available throughout the Greater Bay Area. Telephone circuit installation and monthly telephone fees not included. © 1997 GeoNet Communications, Inc. All rights reserved. GeoNet Communications is a trademark of GeoNet Communications, Inc.

- Intel ATX Form Factor
- (7" H x 19" W x 18.5" D)
- Black Epoxy Powder-Coated Exterior Paint Finish
- Three 5.25" Horizontal Front Accessible Drive Bays and Two 3.5" Vertical Internal Drive Bays
- Locking, Dust-Proof Front Door with Black Keylock
- Low Noise, High MTBF Cooling Fans
- Intel ATX or Compatible Motherboard Mountable on Fixed Standoffs
- (Intel I/O Shields & ATX Power Supplies Also Available)

## 19" RACKMOUNT KEYBOARD WITH MOUSE HOLDER

## RC4108/RC4114

- 8 to 14-Slot Industrial Rackmount Enclosure
- (7" H x 19" W x 18.5" D)
- Black Epoxy Powder-Coated Exterior Paint Finish
- Three 5.25" Horizontal Front Accessible Drive Bays and One 3.5" Vertical Front Accessible Drive Bay
- Locking, Dust-Proof Front Door with Black Keylock
- Low Noise, High MTBF Cooling Fans
- Baby-AT or Full-Size Motherboard or 8-Slot Passive Backplane Mountable (RC4108); 14-Slot Passive Backplane Mountable (RC4114) on Fixed Standoffs
- (AT & PS/2 Style Power Supplies Also Available)

## QUAD PENTIUM-PRO RACKMOUNT SYSTEM

**Call For Price**

- RC4114Q, 14-Slot Industrial Rackmount Enclosure
- (8.75" H x 19" W x 26" D)
- Black Epoxy Powder-Coated Exterior Paint Finish
- Four 5.25" Horizontal Front Accessible Drive Bays
- One 3.5" Vertical Front Accessible Drive Bay
- Quad Pentium Pro PCI Mainboard (AMI Goliath)
- Four Pentium Pro-200MHz CPUs with CPU Cooling Fans
- 128MB EDO Memory
- Teac 1.44MB (3.5") Floppy Disk Drive, Black Face
- Western Digital 4.0GB IDE Hard Disk
- Toshiba 12X IDE CD-ROM Drive, Black Face
- 4MB Matrox Millennium VGA Card
- Kensington "Expert" Trackball

- Windows NT 4.0 Workstation
- 600W Power Supply
- Viewsonic 17" SVGA Monitor
- Keytronic 104 PS/2 Enhanced Keyboard
- (Rackmount Keyboard & Monitor Enclosure Also Available)

## RC5107HAX/RC5108AT

- 7 or 8-Slot Industrial Rackmount Enclosure
- (8.75" H x 19" W x 20" D)
- White High-Baked Water Exterior Paint Finish (Also Available in Black Epoxy Powder-Coated Exterior Paint Finish)
- One 5.25" Vertical Front Accessible Drive Bay, One 3.5" Vertical Front Accessible Drive Bay, Three 3.5" Vertical Internal Drive Bays
- Locking, Dust-Proof Front Door With Silver Keylock
- Low Noise, High MTBF Hot-Swappable Cooling Fans
- Baby-AT or 8-Slot Passive Backplane Mountable (RC5108AT); Intel ATX or Compatible Motherboard Mountable (RC5107HAX) on Fixed Standoffs
- 300W Hot Swappable, Redundant Power Supplies (Front Accessible)

## RC5120QS

- 20-Slot Industrial Rackmount Enclosure
- (8.75" H x 19" W x 26" D)
- Black Epoxy Powder-Coated Exterior Paint Finish
- Four 3.5" Horizontal Front Accessible Drive Bays and Two 3.5" Horizontal Internal Drive Bays, Two 3.5" Vertical Internal Drive Bays
- Locking, Dust-Proof Front Door With Black Keylock
- Low Noise, High MTBF Cooling Fans-Five 39CFM Fans in Center
- 20-Slot Passive or Segmented Backplane Mountable on Fixed Standoffs
- 300W Hot Swappable, Redundant Power Supplies (Front Accessible)

The Rackmount Innovation Company

1515 Industrial Way, Belmont, CA 94002

# Creativity and Innovation at Its Best

**INFITECH**  
The Rackmount Innovation Company

- Design to pass FCC class A or B, UL, CE certifications
- Improve EMI performance
- Superior cooling effects by optimal air-flow design
- Reduce fan noise level within the enclosure
- Better electrical grounding
- No overspray or painting inside
- No rough edges (safer handling)
- Durable epoxy powder-coated paint
- Easier replacement of air filter and fans

## High-Performance Rackmount PC Products for Industrial, Computer Telephony, Semiconductor & Telecommunications

### STAINLESS STEEL RACKMOUNT SYSTEM

- RC4114SS, 14-Slot Industrial Rackmount Enclosure
- (7" H x 19" W x 18.5" D)
- Electro-galvanized Steel (Zinc Plated) Body with Stainless Steel Front Panel
- Three 5.25" Horizontal Front Accessible Drive Bays, One 3.5" Vertical Front Accessible Drive Bay
- Pentium 166MHz CPU Card (Intel Triton Chipset, 256K Pipeline Burst Cache)
- Pentium 166MHz CPU with CPU Cooling Fan
- 14-Slot PCI/ISA Passive Backplane
- 32MB EDO Memory
- Teac 1.44MB 3.5" Floppy Drive
- Western Digital 2.1GB SCSI Hard Drive
- Toshiba 12X SCSI CD-ROM
- Adaptec 2940 SCSI Controller
- Diamond Stealth 64bit 2MB VGA Card
- Microsoft Windows NT 4.0 Workstation
- 300W PS/2 Power Supply
- 19" Stainless Steel Rackmount Keyboard with MS Mouse
- Class 1 or 10 Cleanroom Applications

### STAINLESS STEEL RACK CABINET

- 36" Stainless Steel Industrial Rack Cabinet
- (36" H x 21" W x 24" D)
- Stainless Steel Construction
- 1U Height Stainless Steel Rackmount Keyboard
- Up to Three 4U Height Rackmount Enclosure or Two 5U Height Rackmount Enclosure Mountable
- For Class 1 or 10 Cleanroom Applications
- (48" and 60" Rack Cabinets Also Available)

Shown with Optional Monitor

#### PENTIUM PRO PCI/ISA CPU CARD WITH FLAT-PANEL/SVGA & ULTRA-WIDE SCSI

- SM-P61PVS, Pentium Pro™ Processor 75MHz - 200MHz
- CPU Built-in 256KB Cache
- Intel® 82440 FX Natoma PCI Chipset
- Up to 128MB, EDO and ECC Support
- 256KB Award Flash BIOS
- On-Board C & T 65550 High Performance PCI Flat Panel/CRT Controller
- On-board 1MB Video Dram, Expandable to 2MB
- On-board Adaptec AIC-7880 Ultra-wide SCSI Controller

#### PENTIUM PCI/ISA CPU CARD WITH FLAT-PANEL/SVGA

- SM-P51PV, Pentium™ Processor 75MHz - 200MHz
- 256KB Pipelined Burst Cache, Upgradable to 512KB
- Intel® 82430 VX PCI Chipset
- Up to 128MB, EDO and ECC Support
- 128KB Award Flash BIOS
- On-Board C & T 65550 High Performance PCI Flat Panel/CRT Controller
- On-board 1MB Video Dram, Expandable to 2MB

#### PCI/ISA MAINBOARD FOR PENTIUM II PROCESSOR (ECS)

- P6KFX-A, Single Pentium™ II 150 - 266MHz Mainboard
- Intel® 82440FX Chipset
- Flash Eeprom, Support Plug and Play 1.0A, APM 1.2, MultiBoot, DMI
- 256K/512K Cache Build-in CPU or CPU Card
- Up to 384MB Memory, EDO and ECC Support
- 3 ISA Slots, 5 PCI Slots (with One ZSA/PCI Shared Slot)
- Full ATX with Dual Height I/O Stack, 4 Layers

#### PCI/ISA DUAL PENTIUM PRO MAINBOARD (ECS)

- P6FX2-A, Dual Pentium Pro™ 150 - 200MHz Mainboard
- Intel® 82440FX Chipset
- 256KB or 512KB Cache
- Up to 512MB Memory, EDO and ECC Support
- 3 ISA Slots, 4 PCI Slots (Including one Shared)
- ATX Single Height, 6 Layers

### INTRANETWARE™ Server Series

The RMNT-FX1a is a Pentium Pro™ based System designed to meet the challenges of today's performance-based server operating systems such as Novell's Enterprise Solutions. Among its unique features are:

- Designed for MIS data center operation
- Rack mount with face plate at front for easy cable management
- 10/100 autosensing, 4 segments auto switching with aggregate throughput of 400Mbps (800 Duplex).
- Plug and play to Ethernet LAN with instant bandwidth increase 4 fold with no change to current equipment or cabling
- RAID-5 and SFF III ready.
- Pentium Pro 200, 64MB memory upgradable to 256MB.
- 8 Gigabyte Wide SCSI drive.
- ECS motherboard P6F x 1-A inside.
- Novell Tested and Approved.

In addition to the above, the rack-mountable RMNT-FX1a system includes several state-of-the-art features as well. It utilizes the intel 440FX\* PCI set chipset as its core logic, a 1MB Award Flash BIOS with support for PnP 1.0A, APM 1.2, Multiboot and DMI, one EPP/ECP mode parallel port, two 16550 high speed serial I/O port, and built-in USB headers for future upgrades.

### Fast-Switching Rack-Mount Server

**New**

#### Chassis

- Rack Mount (ATX Platform)
- 16.813" x 18.88" x 6.75" (W x D x H)
- Five 3.5" drive bays (one exposed)
- One 5.25" drive bay (exposed)

#### Certifications

- FCC Class B for the system
- Novell 4.1, with approved options

#### Warranty

- Two-year parts and labor standard
- Optional on-site warranty available

#### Options

- Video monitor 14, 15 or 17" Mounting Rack
- Choice of Novell Intranetware 4.11, 3.xx or Windows NT
- Webserver (for Intranetware) option
- Tape drive

Shown with Optional Monitor

Your One-Stop Source for Industrial Computer Needs

**Infitech Moves to a New 40,000 sq.ft. Location in Belmont!**  
You are always invited to tour our facilities and enjoy our exciting showroom!

All trademarks are property of their respective owners. All rights reserved.

**On the other side, where do you see the opportunities?**

We see an abundance of opportunities: tremendous growth in datacom/telecom as the infrastructure needs to improve to keep up with the growth of the Internet; all kinds of electronic commerce sites, for both consumer and business markets; enterprise apps as companies move to an intranet platform, to name a few.

**Business models, particularly for Web-based companies, are constantly changing—companies are reinventing themselves, changing their plans as the market changes, as new products are introduced, etc. How do you steer through this environment?**

I think the Web-based models are new in some ways, but in other ways they aren't different. You need to understand the basics of your business—whether it be retailing, in the case of an electronic retailer, or software development and sales, in the case of an intranet software company—and then identify what might be different about the business as it moves to the Web.

**Some people prefer or are better skilled at starting new companies than running older or larger companies. Have you seen an increase in "repeat customers?" Do you prefer these types of customers?**

By this question I take it you are talking about repeat entrepreneurs. Sure, people who have done this before are in some measure more likely to be successful again because they have made some mistakes and know the ropes.

It is hard to find people who want to do this again, because it's hard work and risky, and if you have been a successful entrepreneur, in some cases, you are set for life and don't need (or want) to do it again. On the other side, there are many strong executives or middle managers in larger companies who are being drawn by the opportunity to start something new for their first time. I don't think we are hung up on one model—it all depends on the situation, the individual and how you can match them and create the right team around each entrepreneur.

**There is a lot of talk—both real and hype—about the wonders of the global reach of the Internet. How does the possibility of reaching a global market impact your investment decisions? How does it influence the type of companies and products you consider?**

We don't think a lot about the global side of an investment, other than to size the overall market for the company's proposed product(s). We understand that a US company is probably going to start in the US, and move eventually outside (some more aggressive than others, depending on market conditions, competition, etc.). We take

it for granted that technology products are a worldwide market, and we know that once a company gets going we will be able to help it expand to its natural global reach. So, global market issues don't play a big role in an initial investment decision, unless there is something specific about the product that is relevant to other markets.

**The VC industry itself is changing—for example, mergers with financial institutions, partnerships, or the creation of funds that give smaller investors access to IPOs and venture investments. Do you see these changes as being good for the VC industry? The economy in general? Are you seeing a change in who is investing and how investments are made? Where do you see these trends heading?**

I don't have an opinion on the merger and acquisition wave in financial institutions with respect to our business. So far we haven't see a change in the way we do business with any of those institutions. A bigger trend, one that has been much written about, is the vast new sums of money pouring into venture capital and the new kinds of institutions investing in this space. Certainly this is something we monitor carefully, because we don't want to get away from what has worked for us historically, just because there is a rush of money, or people paying higher than traditional prices for start-ups. My sense is that these are cyclical trends, and a few years from now things will look a little more like they did a few years before.

## **Timothy Draper Managing Director Draper Fisher Jurvetson**

Founded in 1985, Draper Fisher Jurvetson has been the lead investor for the company's first round of financing in the majority of its over 150 high-tech investments. Beyond simply picking technologies that will have a large impact, Draper Fisher Jurvetson believes in a "people-focused approach to venture capital investing."

The Draper name is well known in the venture capital industry. Timothy Draper's grandfather, General William H. Draper Jr., founded Draper, Gaither & Anderson in 1958, after serving as undersecretary of the Army where he was responsible for economic reconstruction of Germany and Japan under the Marshall Plan.

Following in the General's footsteps, his son, William Draper III, started Draper & Johnson Investment Company in 1962. Three years later,

in 1965 he founded Sutter Hill Ventures, which he managed until 1981. After serving as administrator and CEO of the United Nations Development Program he returned to venture capital in 1995 by establishing Draper International, which focuses on venture investments in India.

In 1985, Timothy Draper left Alex. Brown & Sons to become the third generation of venture capitalists in his family with the formation of Draper Fisher Jurvetson. So it comes as no surprise that he says "venture capital is in my blood." This interview was conducted via email. **What are your criteria for investing in a company and/or founding team?**

Strong educational backgrounds, high energy levels, drive, enthusiasm, persistence.

It takes a long time to be an overnight success. We have to know they'll be around in the dark times. It is usually in their eyes.

**What part of the product/company life cycle do you concentrate in?**

We do mostly raw start-ups. We feel we can make a bigger impact on a company early on by setting a course for the future, by setting values and expectations for the people, and by building an appropriate business model for the company.

**What distinguished you from other VC firms?**

We are focused exclusively on early-stage information technology opportunities. We were first to advertise. We have made a conscious effort to expand our network throughout the world. We don't have an office on Sand Hill Road. Our returns are generally better.

**What is Draper International? What is its relationship to Draper Fisher Jurvetson?**

My Dad started Draper International. He was one of the founding fathers of the venture capital industry before becoming the highest ranking American in the United Nations. After having visited 110 different countries, he decided to start a venture fund for India. It is already a financial success. Our relationship is terrific. He sends us a lot of opportunities to invest in companies run by Indians that are based here in the Silicon Valley.

**How does the possibility of reaching a global market impact your investment decisions? How does it influence the type of companies and products you consider?**

The global markets are making us excited and

scared. Excited because a company can grow to a billion dollars in value faster than ever before. Scared because our companies will have competition everywhere from Bangalore to Prague.

**What do you see as the parallels and/or differences between today's growing Internet-related investment environment and the early 1980s, during the initial growth of the personal computer?**

The people I met in the early '80s had to be unusual enough to want to leave their jobs in an environment when the entrepreneurial risk was very great. They took on financial, career, and social risk. Now the barrier to becoming an entrepreneur is lower. They can actually make more money in a start-up, it's easy to find a new job, and failure is only a battle scar.

**How has the explosion of the Internet changed or influenced the type of companies you invest in?**

We put all our money in the Internet now. Opportunities abound.

**Has the number of proposals increased?**

By an order of magnitude. We used to have to hunt high and wide for an entrepreneur. Now they send us twenty proposals every day.

**How have business proposals changed?**

This brings to mind two great stories. First, I-Cube came to us promoting their concept for a new emulation software company. In our due diligence we realized that the chip they had developed to do emulation would be revolutionary in many applications, and would effect larger markets than an emulation company. So, with the help of the founders we restructured the team to build a semiconductor company and develop a new business model.

Secondly, Hotmail came to us as a Web database company. We were escorting them to the door, having turned them down flat, when the founder, Sabeer Bhatia said, "We do have this other idea for Web-based email." My partner, Steve Jurvetson, brought them back in. After some discussion, we funded them, and in our first board meeting, I suggested embedding a message [about the product] in every email anyone sent with Hotmail and because of this unique distribution strategy, Hotmail now boasts seven million email subscribers.

In both cases we helped the founders recruit appropriate management to execute the new business model. It turns out that a better mousetrap is no longer enough to build a successful company in technology. Now, the way a company develops their business model and how they exploit their market is at least as important, and we have been able to help.

**Are there any particular areas that you are avoiding because of overcrowding or you just don't see the opportunity to make any money?**

We have been avoiding any business that is easily replicable. If anyone can do it, they probably will, and have.

**With so many start-ups looking for financing, how important is it to you if a new company would be doing something that complements other companies in your portfolio?**

We generally look at each investment opportunity on its own merits. We do however have a great network of forty or so Internet companies. If they can take advantage of our network and that will make them successful, we do take that into account.

**What do you think of Java?**

Java will be big when bandwidth increases. This will provide a lot of opportunity for new start-ups.

**Are you seeing a change in who is investing and how investments are made?**

Yeah. People fight to get into hot deals. We would rather find them before they are hot.

There are a lot of new faces in our industry now.

**Where do you see these trends heading?**

I think it is very healthy for our economy. Entrepreneurs will be well funded. People will be employed. New technologies will change our lives for the better.

**Venture capitalists fuel change and you work closely with visionaries in the industry.**

**What is the role of the venture capitalist?**

The venture capitalist is there to fill gaps. The gaps used to be the money and the management. Now the gaps are business models and flexibility.

**Do your social values fit into your investment criteria in the sense that investments steer industry development and thus social development?**

They are perfectly aligned. I believe that technology entrepreneurs make our lives better. What better way to spend a life than to help them do it?

## Ray Rothrock General Partner Venrock Associates

As the venture capital investment arm of the Rockefeller Family, Venrock Associates continues a tradition of funding entrepreneurs that spans the most of the twentieth century. In the 1930s, Laurance S. Rockefeller pioneered early-stage venture financing through funding of emerging aviation and aerospace companies, such as McDonnell Aircraft and Eastern Air Lines.

Today, with offices in New York and California,

Venrock remains a high-tech-only capital investment organization—investing in information science, life science and health care services.

Ray Rothrock joined Venrock as a venture capitalist in 1988, after five years as an engineer in the energy industry and then six years in the computer industry. At Venrock he focuses primarily on information and Internet companies. Taking time out from his busy schedule, this interview was conducted over the phone.

**What parallels or differences do you see between today's exploding market, in particular the growing number of start-ups, and the early 1980s, with the growth of the personal computer?**

Pre-'84, before the PC boom?

There has certainly been an opening of the floodgates of ideas. Just as the very cheap microprocessor made for an expansive platform on which to build products, so has the Internet and the Web. The explosion of TCP/IP connectivity around the world has essentially created what has been called real estate—new real estate. Cheap microprocessors in the early '80s created new real estate to build things on and so has this network, which as been incarnated in the form of an Internet, but it is really an open TCP/IP-based network.

**Why is 1984 a demarcation point? When you say 1984, I think of the**

**introduction of the Macintosh, but I doubt that is what you are referring to.**

From my perspective, '84 is when Sun, Microsoft, and a few other major companies went public. There was huge rush to the IPO window at that time. It closed down shortly thereafter and, in fact, it sort of slid down hill until '87 when there was a crash. That really shut things down until '90-'91.

A lot of people divide the decade pre-'84/post-'84 in terms of high-tech venture capital. There was a fairly liquid and active stock market before '84, and afterwards it was very tight and hard to get to.

**With the growth of Internet-related companies are you getting more business proposals?**

More is a relative term. The industry's gotten bigger and so forth. We are still about the size we were ten years ago. We are seeing a couple thousand plans a year.

**Are the business models changing?**

They are changing not only when they first come in, but also after we make these investments, they change again.

# KONICOM

**STORE HOURS : Monday - Saturday from 9:30AM to 7:00PM PST**

In the early '80s, it was much more of what you would call a manufacturing business model: You make a product, which costs so much to make, and you shipped it through your distribution channels, usually a direct sales force. These days, the old manufacturing model has changed drastically. Not only have a lot of products become free—so revenues have had to come from other sources such as advertising or membership—but the distribution channels have also exploded in terms of reach as well as the ability to get to a lot of people quickly.

Yes, it has changed dramatically and that has been the case in the last two or three years. Also, the advertising revenue models used to be something that venture capitalists would rarely do, if ever.

**Has the level of investment changed?**

It is dramatically up. First rounds used to be a million bucks, now they are three, four, five million bucks. The amount of capital required to sustain a start-up company for its first years of operations is two or three times what it was a decade ago.

**Is that part of what is driving the increasing number of partnerships?**

There is an entrepreneurial view to that, but I think there is also a more macro-economic view.

There is a tremendous amount of liquidity in the stock market. Pension funds and mutual funds have been receiving cash by the buckets and are supposed to allocate n-percent to venture capital. If you look at just the growth of the economy and of the market, there is still only 3-5% going into venture capital. But the basis on which that is made is three or four times bigger. So, the amount of capital that is being earmarked by pension managers is the same percentage, but in absolute terms is two or three times what it used to be. That "oversupply" of capital has created a lot of opportunity for venture capital partnerships to be spawned.

**Are there particular areas that you are beginning to see as overcrowded or areas where you don't see how the business model will succeed? And the flip side of that is, where do you see the opportunities?** It's hard to say what's overcrowded or underserved. I don't have a crystal ball and I'm not a world expert on these matters, but obviously there are certain market segments which are hotter than others. Networking is still very hot, it is a huge market and the penetration is relatively low—networking, networking products, remote access, those sorts of things. Security is very hot. As everyone has connected to the network, they've realized that it has made them more vulnerable. Intellectual assets are becoming a more valuable property on the balance

sheet of a company and protecting them is driving a lot of investment for new products that will help them manage and protect these assets.

The ability to find things on the Internet has been a very hot area, witness the 4-5 search companies. That's just getting bigger and bigger because we are seeing only the first generation of these products. There is bound to be a second generation—someone is going to come up with a better way to do this and we continually look for the guy who is going to have an edge. Just as in the PC space—spreadsheets, word processors, and so forth—there was a lot of leapfrogging, there will probably be a lot of leapfrogging with Internet applications too.

**Some people prefer or are better at building a start-up than working at older, more mature companies. Have you seen an increase in what I call "repeat customers?"**

[laughs] Yes, we have had a few. Even if it wasn't successful you nonetheless have the benefit of knowing the person; they know you, and you've learned together from the mistakes you made.

**How important is it when a proposal complements other companies or products in your portfolio?**

It is certainly not top tier, but it is second tier in terms of importance. We get our companies together every so often to have everybody share what's going on so that they can derive mutual benefits. But we don't sit around and look at our portfolio and say, "Here's a hole and let's go out and fill it." We don't look at the world that way.

**There is a lot of talk—both real and hype—about the global reach of the Internet. How does that factor into your investment decisions?**

It makes for a very large market because it is global rather than regional or national or local. And it makes for a lot of geographic expansion opportunity, which can become very important in time. All those things together make for an opportunity.

It also means that distribution may not be as difficult as it used to be on a global basis, depending on what the product is. If you are selling non-hard assets, non-hard products, like travel services or financial services, you can have an enormous reach. That just didn't exist five years ago—plain and simple, it is new real estate. **Venture capitalists fuel change and you work closely with visionaries in the industry. What is**

**the role of the venture capitalist? Do social values fit into your investment criteria—in the sense that investments steer industrial developments which impact social development?**

They do for us. Again, we've been around a very long time. Our limited partners are individuals, members of the Rockefeller family, and a few selected university endowments, which have been invited in. It's a group that has a vision for the development of economic landscape.

We obviously work hard to generate good financial returns for our limited partners, but there is a value to generating jobs, a tax base, and a wealth base for the employees and the other shareholders of these companies. We

track that. We don't put it up as our first thing, but we take that into consideration. There are deals that we reject out of hand just because we don't think they are appropriate from a social or political point of view.

**Venrock mostly serves the Rockefeller family. How does that differentiate you from other VC firms, if that is even a factor?**

It does in the sense that a lot of firms get their money from pensions, trusts, and other money managers that manage huge assets. Because our money comes from individuals and related entities of those individuals, one

way to view it is we are closer to the actual owners of the capital. There are not as many people in the food chain. I am not trying to tell you that we are better than others, but we are pretty careful. If a deal is going down we will work very hard to save it and somehow to recover the company and the capital so that everyone will walk away on a friendly basis or on a basis that everyone feels good about, rather than just walking away from a deal. The Rockefeller's never turned their back on anybody and we don't either.

**We are beginning to see venture funds opening to smaller investors, what's your sense of that?**

Venrock's roots are as an angel, small investor fund. It was the Rockefeller brothers who got together and pulled \$5000 or \$10,000 back in the '50s and '60s. That's how they got started, that's how Venrock evolved. One of the original angel investors in the nation was Laurance Rockefeller.

We think it is fine. We understand what's going on and think they provide a very important role. We're very willing and able and want to work with these people when a good project

comes along. We are not very dogmatic in our view of all this.

## **Jim Breyer** **Managing Partner** **Accel Partners**

For over twenty years, Accel Partners has invested in the growth of more than one hundred companies. With a capital base of over \$500 million, Accel Partners' investors include leading international financial institutions, corporations, other venture capital firms, and entrepreneurs. It concentrates its funding in early-stage companies, predominately in the Internet software and communications industries. It prefers to be a lead or co-lead investor and takes a board seat in 80% of its investments.

Jim Breyer has been in the software and technology industries since the early 1980s. At Accel Partners, he has been responsible for numerous Internet, enterprise software, and networking investments. For Breyer, being a venture capitalist is more than just acting as a financial engineer. At Accel, he explains, "We view ourselves as business development partners for entrepreneurs. We enjoy rolling up our sleeves, working closely with entrepreneurs, and helping to build companies." I connected with Breyer for this interview on the phone during an otherwise meeting-filled day.

### **What does an average day for you look like?**

I'll give you a feeling for what today looked like: Had a breakfast meeting with an entrepreneur who is leaving a major software company. He's looking to start an Internet company and wanted to run some preliminary ideas by me. It's an individual who I've known for about two years. After the breakfast I had a board meeting at a company called MPath, which is focused on enabling technologies for entertainment on the Internet as well as applications such as multi-player games for the Internet. Next, I had a meeting at a large technology company with senior executives who are looking to partner with young emerging companies. This large company has invested in a number of our start-up companies. Later today I will be meeting with a Wall Street Internet analyst. That's a typical day.

**You've been in the high-tech industry for a comparatively long time. What parallels or differences**

### **do you see today compared to the early-/mid-'80s?**

There are a number of parallels. First, on the positive side, in the last three years there has been a very rapid adoption and commercialization of technologies, largely driven by the Internet. This is very similar to the 1982-83 time period in the personal computing business. We are also seeing a very major upside in opportunities for entrepreneurs. In both time periods, time was compressed and companies were reaching critical mass extremely quickly.

On the negative side, there have been numerous me-too companies that have been funded by venture capitalists. Whereas five years ago, venture capitalists may have funded only a couple companies per industry segment, over the last couple years there have been in some cases

dozens of companies funded in certain segments. The search engine business is a good example of an attractive market segment that was over-funded by the venture industry and the public markets. We simply should not have seen ten or so search engine companies funded. The number should have been more like two to three.

There's no doubt we have been in an extreme financial mania in this environment as in the 1982-83 environment. We all know it is going to end. In many ways, these are the best of times for the financial markets.

### **Do you foresee a shake-out or consolidation over the next couple years?**

Absolutely. We are already in the midst of consolidation. We've seen some companies declare bankruptcy this year and others, particularly in Internet commerce and content, will continue to face significant difficulties.

At the same time we could not be more bullish about the upside opportunity that entrepreneurs can take advantage of. In a very meaningful way, the very best entrepreneurs are able to build critical mass much more quickly than ever before. Over the next five years my expectation is we will see a number of home runs in the Internet space. It just simply won't be as easy as it has been over the last couple years.

### **When you say it won't be as easy, do you mean VCs finding those home runs or for entrepreneurs to get backing?**

Both. I think for entrepreneurs to get backing there will need to be a more detailed business plan, more credible technical defensibility, and

a valid business model projection. In 1995 and 1996, almost any business plan with the word "Internet" in the introduction seemed to receive funding. Those days are clearly over. Investors need to roll-up their sleeves and focus on many of the details regarding building the business—this is healthy in many ways.

### **In 1995-96, no one knew what would be a good business plan for an Internet-related business, while today there is a better understanding of what might succeed.**

I think that's part of it, but there was a great deal of hype and frenzy in 1995. In 1996, I would characterize the environment as "The Year of Internet Madness." People were launching companies at an unprecedented rate. Entrepreneurs and capitalists didn't think through the details of the business plan and the opportunity in a manner that they should have. There was simply too much hype and froth around Internet-related opportunities. Over time, with some well-publicized disasters, entrepreneurs are becoming more focused on the details, technical defensibility, and differentiation. That simply wasn't the case twelve to twenty-four months ago.

### **Companies are reinventing themselves as the market changes, as new products are introduced. What sort of criteria for investing do you use in a constantly changing environment?**

There is simply no doubt that the Internet has forced companies to make strategic changes on a monthly basis. Previously we would go board meeting to board meeting and rarely have to make fundamental changes to our strategy. Today, not a board meeting goes by where a major strategic initiative isn't discussed and implemented. Being able to adapt and exhibit a very high degree of flexibility is a characteristic we look for in all of the management teams that we back. Reinvention is part of the very best companies in the Internet space. This simply wasn't the case in the early days of client-server software, for instance.

### **Are you looking at different types of companies and products today than a couple years ago?**

We are. We were among the first venture firms to invest in the Internet. In 1993, we invested in UUNET and looked for other Internet companies that were providing core enabling infrastructure technology to the major ISPs. That was the theme in 1994 and 1995. At the same time in 1995 and into 1996, we looked very hard at companies that were building enabling technology in the system software and intranet segment—companies that we invested in include Collabra, which we sold to Netscape, Illustra, which was sold to Informix, Progressive

Hours: Mon-Fri 9-6 Sat 12-4

Networks, and others. In 1996 and 1997, we've become very focused on intranet applications companies, examples would include Actuate in San Mateo, and Portal in Cupertino.

Today, we are also looking hard at new areas such as electronic commerce, Internet security infrastructure, and information-based businesses. **What do you think of Java and the creation of Java-focused funds?**

In early-1996 we created an Internet Technology Fund, which invests in core Internet technologies, both in communications as well as software. Java is certainly a piece of what we focus on in that fund as well as a firm. There are a couple of very important investments where Java plays a central role in the opportunity. An example would be AlphaBlox, a start-up company in Mountain View. At the same time, we look at Java as a core enabling technology that almost every one of our companies should be working with.

**Is the trend for more capital being required in the early stages?**

Absolutely. What we are seeing is that companies initially need to more aggressively build product development and marketing functions. Very typically, a company needs \$2-3 million in the first year to aggressively build product and define its market. Previously that number might have been closer to \$1 million.

At the same time when a company is about to go into public beta, another major financing is often required. We like to bring in major corporate and strategic investors at this stage, who bring not only money, but major leverage in marketing and distribution. Very often those financial investments are between \$5-10 million.

**Is this the investor version of Web-time?**

It is. It is the combination of the compression of time that the Internet has fueled, at the same time, the importance to being "first to market" has been intensified. These factors are fueling a much more aggressive build-out of products and technologies.

**Is there also an increased competition between venture capital firms?**

I think the competitive intensity between venture capital firms has been fairly high for four or five years. Venture capital firms are being forced to think hard about where they should be specialized. The days of the generalist venture capitalist, who did a bio-tech deal one day and a semiconductor the next, are long gone. We as venture capitalists are required to specialize by industry and by stage of investment. In addition, the very best entrepreneurs will do significant reference checks both on

the individual venture capitalists, who is joining the board, as well as the venture firm.

**When a company comes to you with a proposal, how important is it that it complements other companies in your portfolio?**

It's not important at all. We look at every business as a standalone investment. Every business that we invest in needs to stand on its own merits. At the same time, because we are so specialized in Internet software and communications, the opportunities to build partnerships between companies is very significant. We encourage the discussion, however, we will never push companies to work together.

**What about what I refer to as "repeat customers," people who prefer starting new companies than working at older or larger companies?**

We like start-ups. We like to be one of the first investors and help shape the business plan, those are the companies that we get most excited about. Over the last two years we have had over a dozen entrepreneurs, that we have worked with previously, come back to us when they started their next companies. This is one of the most gratifying parts of our business.

**How does the potential of the global reach of the Internet influence your investment decisions? Or does it?**

It hasn't really had a major influence on investment decisions. We certainly look at the broad opportunities that the Internet presents as a very attractive dynamic that should be taken advantage of. At the same time, we view these companies as highly personal, therefore we do not invest in off-shore companies. Our investments are focused in Silicon Valley and the West in particular, and some activity on the East coast. We believe the personal interaction is a core part of building these companies.

The international partnership activities are very core to what we do as business development partners. Every entrepreneurial start-up needs to start thinking about international partnerships on day one. We have deep partnerships with a number of major European and Japanese technology companies. At the appropriate time and with an appropriately structured deal we certainly help to facilitate cementing these relationships.

**Do social values fit into your investment criteria?**

They do in a very subtle way. First and foremost, we look to back ruthlessly honest entrepreneurs—honesty and integrity is everything. Secondly, there are certain segments of the business where we have been very proactive, which represent to us areas where not only are these we can make or generate significant returns, but companies are involved in a very

positive way socially. One segment in particular, the education market, has been one of great interest for the firm. We have invested in five education-oriented companies that are all taking significant advantage of the Internet. These are highly gratifying investments for us.

**Conversely, are there areas that you would not invest in?**

I think that anything that moves in the gray area in terms of reputation and integrity would be highly questionable for us, certain adult entertainment sites, for instance, would be areas that would be of no interest to us. ■

# Helping with Your Industrial PC Systems Solutions

Since 1990

- ◆ 6U Rackmount Chassis
- ◆ 20-Slot ISA/PCI BP  
option: 10+10, 5+5+5+5
- ◆ Redundant Power Supply
- ◆ 8 Drive Bays

- ◆ 19" Industrial Rackmount Workstation
- ◆ Built-in 14" or 15" Color SVGA monitor (or 9.4/10.4/14" Color LCD)
- ◆ PS Universal 65~265 VAC Input or DC/+12, +24, -48V Input
- ◆ 4/8/10/12/14 Slot ISA/PCI Backplane Option

- ✓ 2U Height (3.5") Chassis
- ✓ 4 Drive Bays, 1-CD, 1-FD, 2-HD
- ✓ PS AC Universal, or DC/+12, +24, -48V
- ✓ 5-Slots
- Type 1: 2-PCI, 2-ISA, 1-CPU (PICMG)
- Type 2: 5-ISA
- Type 3: 4-PCI, 1-CPU (PICMG)

- ◆ Compact Size
- ◆ Wall Mount, Rackmount or Stand-Alone Chassis
- ◆ 3-slot/5-Slot
- ◆ Power Supply: AC Universal or DC/+12, +24, -48V

- ◆ Multi-PC Controller VGA/KB/Mouse (Audio/Voice Option)
- ◆ Auto Scan or Manual Control
- ◆ 4/6/8/16 Ports Available

- ✓ Full Line of Single Board Computer
- ✓ 486~Pentium Pro CPU
- ✓ Full line of BP
- ✓ 3~20 Slots ISA/PCI
- Segmented, 6+8, 10+10, 5+5+5+5 and others

- 85~265 VAC, -48VDC, +24VDC, +12VDC Input
- 70W~350W Output
- 0~55 Degree Celsius Operating
- MTBF>20 Years

# Raising Money On The Internet

## Technology Funding Brings Venture Capitalism To The People

By Cassidy F. Allen

**T**he behind-the-scenes workings of venture capital have traditionally been a murky area for the general public; at best, the common man conjures up images of well-manicured businesspeople lugging leather briefcases heavy with "liquid assets" and closing deals via cellular phones; at worst, the common man doesn't even know what "venture capital" means. That's no surprise, since the VC world of high-risk, high-return investment has, traditionally, always been an area populated by the financial elite. Only individuals, corporations or investment firms with the luxury of "money to burn" (often almost literally, especially in the technology sector) can afford to potentially absorb the massive financial losses inherent in the high-risk world of startups. And, similarly, only these millionaires and billionaires would line their pockets when the next "killer app" or computing trend that they've funded has hit the jackpot.

But Technology Funding (<http://www.techfunding.com>), an eighteen-year veteran of the venture capital industry, is offering to democratize all that. Now the semi-average Joe with

\$60,000 in assets (excluding home and automobile) and a gross annual income of \$25,000 or more can gamble with startups, sharing in the massive returns on investment that venture funding can offer (as well as the crushing losses). And there's no phone calls to make or

free market; others, such as Mark Gorenberg of Hammer-Winblad, have lambasted the move as "a kooky idea." Ellen Brodbine, director of communications for Technology Funding, agrees with the latter view in principle, but sees her company's effort as an exception.

"It is a kooky idea for most venture firms," Brodbine says. "Not for us. Technology Funding has raised money from individual investors for over eighteen years. In doing so, we have developed and improved the systems required to support and communicate with a large investor community. By using the Internet as an alternative distribution channel, we can further improve communications to our investors and potentially reduce costs to the fund for marketing, distribution, and print communications."

Essentially, Technology Funding is doing what it has always done: building VC funds small investor by

small investor, accruing and apportioning cash not unlike the more-familiar mutual fund. Instead of stocks and bonds, though, Technology Funding puts its clients' money into high-risk techno-startups. But by offering its services via the Internet, the company has effectively reached out to millions of potential

*continued on page 231*

meetings to attend with consultants; all one needs is a PC and Internet connection. Yes, it was bound to happen sooner or later: Venture capital opportunities are now being offered on the Internet.

Some industry veterans are applauding the move as a bold victory for the concept of the

### BASIC SYSTEM CONFIGURATION

- 8MB RAM Expandable Except Pentium® PRO+16MB
- IDE 2FD/4HD Controller
- 101 Key Keytronic Keyboard
- Teac 1.44MB Floppy Drive
- 1 Parallel, 2 Serial Ports
- Mini Tower Case (Pentium® Pro, Tucson®, & MARL® Uses ATX Mid Tower Case)
- Power Supply
- One Year Warranty

LIFETIME LABOR WARRANTY ON SYSTEM!

### MULTIMEDIA COMPLETE SYSTEM w/16X SPEED CD ROM

#### PACKAGE INCLUDES:

- Motherboard w/512K Cache
- 16 MB RAM
- 1 2GB Hard Drive (Fujitsu)
- Mini Tower Case
- 16X IDE CD-ROM (Fujitsu)
- Sound Blaster 16 OEM Soundcard
- Teac 1.44MB Floppy Drive
- 14" SVGA 1024x768, 28mm Ni Color Monitor
- SVGA Card w/1MB (Trident) Chipset
- IDE Enhanced Controller (2S/1P/1G)
- 101 Keyboard
- 25W Speakers
- Microsoft Compatible Mouse
- Windows 95 Software

# Still Crazy After All These Years?

## Why We Still Care About Macintosh

Last month's column was full of optimism for Apple's future. Shortly after its publication, Apple, led by Steve Jobs, set about killing the MacOS clone market.

This month, we'll start with Sam's thoughts on why we love the Mac (and why Windows users don't particularly care one way or the other about their computers). Then I'll talk about Apple's changing attitudes regarding MacOS clones, and what the recent destruction of the clone market means to Mac users.—Peter

### A User's Tale

By Sam Penrose

*In faith, I do not love thee with mine eyes,  
For they in thee a thousand errors note;  
But 'tis my heart that loves what they despise,  
Who in despite of view is pleased to dote.*

—W. Shakespeare

Every day, thousands of otherwise rational and productive people spend valuable time devouring articles, press releases, and rumors regarding a medium-sized computer manufacturer. Some have practical motives, but most seem transfixed by the drama itself.

Apple's story features as many characters, recurring themes and plot twists as a Shakespeare play. Gil Amelio: Prospero loving by letting go, or

Polonius nattering while darkness gathers? Steve Jobs: Prince Hal reclaiming the throne and restoring the nation, or King Lear making a doomed effort to save the realm he abdicated? Bill Gates: evil Richard III seducing Apple in front of the very coffin of her market share, or good Iago helping Othello through a little spat with new spouses Power, Motorola, and UMAX?

As Apple's reputation and the morale of its fans reach new lows, you might ask yourself why people care so much. Microsoft and Intel dominate the market; you would think they'd dominate the public imagination as well.

We know Bill Gates is rich and powerful and rich, but he comes across as an exceptionally smart reptile. We fear his teeth and covet his wealth, but he doesn't engage more complicated emotions. Apple, on the other hand, often seems like a soap opera disguised as a business.

At first glance, the Microsoft story appears rather similar to the Apple story. Each company was founded by a pair of geeks, and each grew to about \$10 billion in sales over the next fifteen years. In each case one geek cashed out early while the other continues in the executive trenches. Even the technology has converged: Windows 95 has many of the user interface features long associated with MacOS, while MacOS 8 has many of the complexity problems long associated with DOS and Windows. But for all these similarities, there is an essential difference which makes people care about Apple in a way they never have about Microsoft.

Apple was founded by two people who wanted to take the best ideas they knew about what a computer could be and make them real. Its history has been a continuous quest to create fabulous technology, with selling it always something of an afterthought. Microsoft was founded by two people who also enjoyed computers but whose main interest was in making a lot of money. Its history has been a continuous quest to sell whatever technology they could invent or trick others into giving them, with the merit and usefulness of that technology always something of an afterthought.

At the press conference introducing the Macintosh, it appeared with a picture of the word "hello" on its screen in hand-written (mouse-written) script. It seemed that the computer was greeting us. People fell in love. Such sentiment over a PR stunt would appear to capture all that is infantile about the cult of Macintosh—computers as ersatz personalities—but at the core you will find an accurate judgment about what computers really are.

Computers are tools. Programmable computers like the Mac and Wintel boxes are a special kind of tool, endlessly flexible within a certain mathematical universe, but mostly we use them to write little notes: emails in Eudora, reports in Word, data entries in FileMaker or Excel, brochures in PageMaker. Elegant tools mirror their users; they work as if they understood how people work. We expect axes to suit our hands, speedometers to suit our eyes, and telephones to suit our ears and mouths. As information machines, computers should suit our minds, and in particular they should be optimized for writing little notes. Thus the burst of recognition at the little computer that could scribble "hello." It was obviously a good tool.

There is another way to look at the personal computer, of course, and that's as a product, a box that is manufactured and sold like any other. More people by far actually boot Windows than MacOS each morning, but the core of Apple's customer base has always been people who are buying a computer for their own use. The core of Microsoft's customer base has always been managers who are buying 2,000 computers that their subordinates have to use, whether they like it or not. That's why the pointedly inefficient DOS reigned for so long, and why Windows remains inelegant even as it gets more useful: You care about the gracefulness of the box you have to stare at all week, but some guy in MIS sure doesn't.

The punch line is that they don't care about cost-benefit analysis either.

### EXPLORER

- Cyrix/IBM 6x86 PR200+ Processor
- Intel 430VX Chipset Mainboard (JBVX)
- 512K Pipeline Burst Cache
- 32Mb EDO RAM 60ns (SIMM 72-Pins)
- 1.44Mb Floppy Drive
- 1.7Gb EIDE Hard Drive
- Built-In EIDE & Hi-Speed I/O
- Mini Tower Case, 230 Watts Power Supply
- Philips 15" 1280x1024 NI 0.28dpi
- Diamond Stealth 2500 2Mb Video DRAM
- 16X EIDE CD-ROM Drive
- Yamaha Chipset Sound Card
- PMPO: 120 Watts Speakers
- Supra 33.6 Internal Fax/Modem
- Logitech 1st Mouse & Mouse Pad
- Keytronic Windows 95 Keyboard
- CD: Microsoft Window 95

For years, independent surveys have demonstrated that giving an employee a Mac costs less and returns more than giving them a Wintel box. For years, middle managers have read those reports, yawned, ordered a few thousand more PCs, and been promoted for it.

That dissonance between the computer as tool and the computer as product is why we still care passionately about Apple and the Mac. We know that Microsoft occasionally creates best-of-class tools like Excel and we know how stupid, arrogant, and self-defeating Apple can be. But we cannot imagine that Microsoft will ever expend the slightest bit more energy improving our tools than necessary to ship truckloads of product to corporations and retailers.

Apple's history reminds us that tools are supposed to match our needs rather than vice-versa, that the exchange of money for computer is a means to an end rather than an end in itself.

We have no idea what is going to happen with Apple in the next six months. We don't know when the multimedia features of today's computers will shift from disconnected, specialized functions to the sort of integrated tool set that the Mac has always provided for handling print. Few of us would bet good money that Apple will be around when that technology is invented. But we suspect that future platform will be backwards compatible with the current version of QuickTime—and we're positive it won't be invented at Microsoft.

## **MacOS Clones and the Physics of Market Share**

*By Peter Linde*

Ask the former commander of the Mir space station about inertia. A few months ago, he became intimately acquainted with its effects.

Inertia, for those of us who chose English Lit over Physics, is the tendency of a body in motion to stay in motion unless acted upon by another force. In the case of the astronauts aboard Mir, the body in motion was an unmanned cargo ship. The force that acted to stop this body in motion was the outer wall of the Mir space station. The results of this tiny lesson in inertia were nearly devastating to those aboard the space station and were, ultimately, devastating to the commander's career.

BMUG members who love their Macs are all too familiar with the effects of inertia on the world. Microsoft has it. Apple has been trying to get it back. Every day we are confronted by the effects of this struggle.

Last month, I wrote a column in this space, full of optimism for Apple's future. Shortly after

## **Elegant tools mirror their users; they work as if they understood how people work.**

*We expect axes to suit our hands, speedometers to suit our eyes, and telephones to suit our ears and mouths.*

## **As information machines, computers should suit our minds.**

its publication, Apple, led by Steve Jobs, set about killing the MacOS clone market. The first sign of trouble came when Apple refused to sign agreements with the clone manufacturers that would allow them to include OS 8 with their machines. Then came word that Apple would not certify any CHRP (Common Hardware Reference Platform) machines made by cloners. This would make it impossible for cloners to stay in business.

Finally, Apple let the other shoe drop when they announced that they would be buying Power Computing, the largest MacOS cloner, out of the MacOS clone business. This week saw announcements by other Mac cloners that they will soon be ending their efforts to extend the Mac market.

The destruction of the clone market is an attempt by Jobs to build back inertia for the best darn little operating system in the world. The question is: Is the attempt misguided? Unfortunately, there is no sure answer at this time. Most BMUGers seem to be unhappy about the end of the clone era. Most on-line and print pundits, like Ric Ford of Macintouch (<http://www.macintouch.com>) are unhappy about it.

Let's try and examine this change in course from an historical perspective. A long time ago, Apple had a choice: License the MacOS and open the door to cloners, or be the only company to sell Macs. As we all know, Apple chose not to license.

It's easy to look back now and say that Apple made a tragic, or even stupid, mistake. Today,

Microsoft and Intel dominate the desktop PC market. Apple is having trouble maintaining market share. But it's also easy to make an argument that they made the best choice they could for the time. There exists an example of what could have happened had they played it the other way.

In the '80s IBM was one of the largest companies in the world. For a while, IBM dominated the PC market with premium-priced desktop machines that ran a wonderful little operating system called DOS. They made huge profits. It seemed that IBM was a juggernaut that could not be stopped.

Then some smart folks came along and reverse-engineered the components of an IBM PC, and the IBM-compatible clone market was born.

Jumping back to the present, when was the last time you heard someone refer to a PC as an IBM compatible? Yet three to four years ago, that was what they were called. Now, with players like Compaq, HP, and thousands of Mom and Pop PC shops selling PCs, IBM is a small player in the PC hardware market. They lost control of the hardware. It became a commodity with much of the profit removed. IBM could no longer compete in the market it helped to create.

So, Apple chose the other route. By doing so, they were able to continue selling Macs at a premium price, unconcerned by the problems that competition might present. This strategy actually worked quite well for many years. Apple made billions of dollars in profit over the years. PC vendors could only dream of the higher margins that Apple was able to command for its CPUs.

But those higher margins came at a now-obvious price. Companies and individuals, enamored of the idea of saving money, purchased the technologically inferior, less intuitive PCs instead of the cooler, more expensive Macs. In addition, PC vendors did an excellent job of portraying the Mac as a toy, rather than a serious computer. Apparently, in order for a computer to be serious, it needed to be difficult to use and nearly impossible to repair when problems did arise.

This points to the other reason that those in charge of Apple felt they could get away with being the only vendor of Macs: They believed they had a clearly superior product. They believed that the world would recognize that the revolutionary Macintosh Graphic User Interface was miles ahead of anything offered by the competition. And once the world saw how much better Macs were, the world would beat a path to Apple's door.

Based on 3DLabs Permedia2 3D graphics engine, Winfast 3D L2300 integrates robust 3D acceleration and MPEG-2 video acceleration as the best price/performance 3D graphics solution for Pentium II, Pentium Pro and Pentium systems. With support for OpenGL, HEIDI and Direct3D application programming interfaces (APIs), the Winfast 3D L2300 is designed to accelerate a broad range of applications such as, 3D authoring, animation, 3D VRML web browsers, 3D-intensive games, CAD applications and 3D presentation.

### Software Compatibility

3D APIs: OpenGL, HEIDI, Direct3D (win32)  
OpenGL Installable Client Driver

- 3D Studio MAX (Kinetix)
- Microsoft Direct 3D--based apps (win32)
- OpenInventor (Template Graphics Software)

## with APPRO Rack Mount Industrial Computers

### 4080H RAID Subsystem

- Eight 5.25" Drive Bays
- Dual Hot Swap PS-400W(AC) or 300W(DC)
- Hot Swap Removable Drives Option
- Three 56 CFM Cooling Fans
- RAID Level 0, 1, 3 & 5 Support
- 19"(W) x 7"(H) x 20"(D)

### Single Board Computer

- CPU: Pentium® Processor 75MHz-200MHz
- Cache: Pipe-line Burst Cache, 512KB
- Memory: Up to 256MB, EDO and ECC Support
- Chipset: Intel® Triton II (430HX) Chipset
- BIOS: AWARD PCI Plug and Play
- VGA: ATI Mach 64 PCI SVGA with 2MB
- SCSI: PCI SCSI Ultra Wide (68 pin), Fast SCSI II (50 pin) Adaptec 7880P Chipset
- I/O: PCI EIDE, FDD, 16550 UART Serial, Parallel, PS2-Keybaord & Mouse
- PCI-PCI Bridge Chip Support for 6 PCI PICMG Backplane

### 5100HT - Granite

### Intelligent Fault Tolerant CT / Network Server

- Over Temp & Fan RPM Monitor
- Hot Swap Fans & Power Supplies
- Hot Swap Removable Drive (optional)
- 8 to 20 Slots PCI/ISA Backplane Support
- Split Backplane (Up to 4 Systems) Support
- AT or ATX Motherboard Support
- Individual Shock Mounts for up to Eight 5.25" Devices
- Air Filters on All Intake Vents
- Front Panel Support for 4 Individual Systems
- Front Panel Mounted Activity & Alarm LED's
- Steel and Aluminum Construction
- 19"(W) x 8.75"(H) x 26"(D)

## ROCK SOLID Fault Tolerant Protection

for CTI and Network Applications

### 7000HT

- 8 to 20 Slots PCI/ISA Backplane Support
- Split Backplane Support (Up to 4 Systems)
- AT or ATX Motherboard Support
- Individual Shock Mounts for Four 5.25" Drives
- FAULT Tolerant Features include: Temperature Monitoring, Hot Swap Fans, Power Supplies & HDD

But Apple underestimated corporate America's desire to save money on the bottom line. If you are looking at buying not one computer, but hundreds or even thousands, even a small difference in price can add up quickly. And the difference in price wasn't small.

Quickly, DOS, and later Windows, began to build incredible inertia throughout corporate America. Once Intel machines had gained that inertia, buying Macs started to be seen as a liability. After all, they were more expensive, and they were so much more simple to use, they surely must be toys, right?

In the business world of today, people seek safety, and there is definitely safety in the dominating market share of Windows-based PCs. Many corporate information systems departments are finding it safer to go with the mentality that states: If the other guy has chosen it, I won't get in trouble if I choose it. So, they choose to ignore what is all too obvious to Mac users and user group members everywhere: The Mac is easier to use, easier to fix when it breaks, and just an all-around better OS.

These aren't just subjective comments. Numerous studies by independent groups, such as the well-respected Gartner Group, have shown that people are more productive on Macs than PCs, that Macs are less expensive to maintain than PCs in a corporate environment, etc.

But inertia can be a hard force to overcome.

In an attempt to build more inertia, Apple decided to allow cloners to license the Mac OS. From the standpoint of computer users, this was a great thing. Better, faster, cheaper Macs hit the street in no time. In some ways, Apple

that his latest move has only added to Apple's inertial decline. ■

*The destruction of the clone market is an attempt by Jobs to build back inertia for the best darn little operating system in the world. The question is:  
**Is the attempt misguided?***

lost its edge in the hardware department (sound like IBM?). Power Computing built machines to order. Other companies beat Apple to the market for multi-processor machines.

The market share of MacOS computers actually began to grow! However, Apple's share of those hardware sales began to slump. Steve Jobs argued that Apple would not survive if Apple continued to subsidize the cloners by selling the OS to them. Therefore, he made it impossible for the cloners to continue.

Only time will tell if Steve Jobs is privy to some information that the rest of us lack. Steve Jobs was widely hailed as the only man who could give Apple back its inertia. From my perspective, and that of many BMUGers, it seems

#### **BMUG Calendar Of Events:**

In addition to our regular meetings, BMUG will be hosting BizFest on Saturday, October 18, on the UC Berkeley Campus in the Pauley Ballroom from 10 am to 6 pm, with a keynote speech by Gil Amelio! We will also be hosting our famous Rummage Sale on Saturday, December 6 from 10-5pm at the BMUG Office.

Check out the BMUG Web site at <http://www.bmug.org> or call BMUG at (510)549-2684 for details.

## **What Is BMUG?**

**B**MUG is an educational non-profit computer user group providing know-how, software, and opportunities for 10,000 computer users from countries around the world. We are in the business of giving away information.

BMUG publishes and distributes some of the best computer books and CD-ROMs available. Our semi-annual 400-page "Newsletter," sent to every member, contains scores of articles on every facet of Macintosh computing, the Internet, and more, plus hundreds of megabytes of useful software on the included CD-ROM, all without a single advertisement. Our three BBSes are thriving virtual communities where thousands of people share information about everything from how to defragment a hard drive to how good the latest Emma Thompson movie is, all presented through the friendly FirstClass user interface.

The BBSes also offer access to much of our constantly updated software library. BMUG offers volunteers a broad range of opportunities to learn valuable skills while helping people and having fun. We support over a dozen free Special Interest Groups aimed at everyone from complete beginners to professional programmers, where any member of the public can come to get questions answered. Members can make appointments with our valiant volunteer hardware gurus to get memory installed or mysterious problems examined.

You can learn more about us on our Web page at <http://www.bmug.org>, where you'll find schedules, maps, our guide to the best products for MacOS and general computing, and software and instructions you can use to take a free tour of our Planet BMUG and BMUG Boston BBSes, available by direct dial or over the Internet. Our office at 2055 Center St. in downtown Berkeley is open from 9 am to 5 pm. Come say hello there or at one of our meetings: weekly on the UC Berkeley campus and monthly in San Francisco and San Jose. For more information, call the announcement line at (510)549-2684, ext. 8. You can also fax us at (510)849-9026 or write us at 1442A Walnut St. #62, Berkeley, CA 94709-1496. Join us!

# Whose Time Bomb Is It, Anyway?

## Tracing Random System Problems To Motherboards That Were Manufactured With Cost-Saving Capacitors

By Woody Liswood

If your computer time is spent working on a PC clone, you may have (or might shortly have) a problem with your motherboard. Some of the cheaper motherboards use aluminum electrolytic capacitors rather than slightly more expensive tantalum capacitors. Aluminum capacitors degrade over time, and lose the ability to supply a steady voltage. What this really means is that your motherboard may be a ticking time bomb just waiting to go off and shut down your computer.

Last December, for no apparent reason, my desktop PC started experiencing random "blue screen" errors on startup and began locking-up in the middle of my work. Blue screen errors, also known as the BSOD (Blue Screen Of Death), occur under Windows 95 when a major problem happens in the operating system. Windows 95 gives you a bright blue screen and displays, in white letters, the type of error it is and a series of memory addresses. Since the computer is now completely locked up, you must do a cold boot to do anything. Naturally, there is nothing in the Windows 95 documentation that tells you what the error messages mean or what to do about them.

Without getting overly paranoid, I began to save every five minutes just so I would not lose too much work at any one time. Since the problems gradually came upon me, I didn't really believe that Windows 95 was the culprit. However, to be safe I called Microsoft for help. The only advice they offered was that the blue screen errors were indicative of a video problem. But even with the latest version of Windows 95 (OSR2, available only to dealers) that is supposed to have a more stable video driver, the frequency of the problems decreased, but did not disappear.

Next, my attention turned to the display board. I called Number Nine

and Diamond for comment. They said that their video boards expect strict compliance with the Intel standard for bus timing and blamed the lockups and blue screen errors on cheap, non-standard chip sets that clone manufacturers may use to drive the motherboard and CPU rather than genuine Intel chip sets. I tried video boards by Hercules, Diamond and Number Nine along with some clone cards but could not detect a change in any of the problems.

Since the board manufacturers said the problems were due to compliance with Intel specifications, I called Intel. They refused to comment, but told me about a company that had been testing motherboards and that I might be interested in their findings. The tests showed that some motherboards manufactured in the US and overseas included the cheaper capacitors which would degrade over time and no longer supply correct voltages and correct timing to the CPU.

I immediately installed a newer version of the same motherboard I was using and *all* the problems went away. No lockups. No blue screen errors. Just a nicely stable computer. I tested three different *new* motherboards without any problems: an Intel Pentium 100, a Cyrix P166 and an AMD K6. I returned to the older motherboard and the problems returned. I also tested the older motherboard with different CPUs—AMD,

Cyrix, and Intel. All of them had the same problems.

While I will not go so far as to recommend only using genuine Intel motherboards, I can positively say that if you are using a clone motherboard with aluminum electrolytic capacitors, most likely you are headed for problems. ■

# A Global Conversation On Knowledge For Development

## A Report From Global Knowledge '97

By Michael Robin

"The information revolution is unthinkable without democracy and true democracy is unthinkable without freedom of information."

*Kofi Annan, secretary-general, United Nations  
Opening Plenary, Global Knowledge '97*

"Technology is not a magic bullet. It's not just a case of saying 'We'll put everyone on the Internet and all the world's problems will go away.'"

*Kerry McNamara, conference secretariat*

For four days in Toronto at the end of June, the World Bank and Government of Canada brought together over 2,000 people to share their experiences on the role of knowledge for economic and social development in the Information Age. The Global Knowledge '97 (GK97) conference's goal was to help develop a better understanding of the use and impact of information and communication technologies, or ICT, in underdeveloped countries.

A conference that explores ways of "harnessing the information revolution for economic development, social cohesion, and poverty alleviation in the 21st century" may sound like common fare when we are bombarded daily with announcements proclaiming the wonders (or horrors) of the "Digital Revolution." In the abstract, the list of topics discussed at GK97 reads like a sampling of *MicroTimes*: the Internet in schools, distance education, telemedicine, remote and wireless access, business on the Internet, privacy and security, digital publishing, the impact of the information age in the workplace, etc. But the challenges addressed at this conference were anything but usual, and the list of participants was anything but typical.

Few people would disagree that information and knowledge—enabled by new digital tech-

nologies—will play a critical role in ways individuals, communities, and nations learn and work together in the 21st century. However, the social, political, and technical challenges surrounding global connectivity dramatically change once you leave the so-called developed countries such as the US, Canada, Japan, and Western Europe. It is difficult to see how "the power of the Internet" alone can make a positive difference in the lives of the majority of people around the world when 1.3 billion people—one-third of the global population—lives on less than \$1 a day, nearly one out of four adults are unable to read or write or do simple arithmetic, and roughly 840 million people go hungry every day. For hungry or minimally literate people who may not have electricity in their home, or may never have used a phone, network access to the libraries of international agricultural research centers or universities is probably not high on their weekly to-do list.

### The Conference

The schedule of events at the Global Knowledge '97 conference were as ambitious as its goals. Organizers brought together representatives from governments, academia, science and technology, business, international organizations, non-governmental organizations, and grass-

roots organizations. Participants came from 124 countries—rich and poor, small and large, wired and unwired. Of the 2,000 people attending GK97, the World Bank provided 500 conference scholarships, while some of the co-sponsoring organizations helped defray the costs for others.

Throughout the nine plenary sessions, from the welcoming presentations by Canadian Prime Minister Jean Chrétien, World Bank President James Wolfensohn, and United Nations Secretary-General Kofi Annan, to the closing address by Nobel Laureate and chief scientist of Lucent Technologies, Arno Penzias, there was a diverse array of speakers covering an equally diverse range of perspectives. Speakers included presidents and government ministers, executive and program directors, staff who implement development programs, CEOs, researchers, and professors.

The Welcoming and Opening Ceremonies, on Sunday evening and Monday morning, were designed to create a framework that would be shared by all participants during the conference. In his welcoming and opening remarks, Wolfensohn reminded the audience that while the technology may be different, the needs they addressed were not new. He stressed that it was important to remember to measure results in terms of human and social improvements and not become distracted by the detail of technology.

Annan underscored Wolfensohn's remarks by pointing out that although squalor amid wealth is a social problem, the eradication of poverty is equally possible by social action. He observed how the work of development has been transformed by information technology and that information contains a potential for democratizing power. Annan's words, "Knowledge is power, information is liberating," were echoed

throughout the conference proceedings.

Another often repeated observation, made by both Wolfensohn and Annan, focused on the growing role of private investments in today's world: Seven years ago, private investments in development were half of public investments, today it is six-times the size of public investments. Both the World Bank and the United Nations are strong proponents of today's popular perspective of increasing the role of private partnerships and decreasing the role of governments. Unfortunately, like sound-bites anywhere, explanations about this change were absent. Rather, it was used like a rally-cry to blankly argue for the magic of the marketplace.

Also speaking at the opening plenary was the president of Costa Rica, José María Figueres, and the president of Uganda, Yoweri K. Museveni. Both presidents focused on education as the fundamental issue—but from very different perspectives.

Costa Rica, for example, has invested heavily in education, fostering a literate and generally well-educated population. However, Figueres pointed out, the Information Age is changing the way we educate our populations: Yesterday, education was focused on "learning to know," whereas today, it is critical to "learn how to learn." Figueres believed that this change in education poses a critical challenge to Costa Rica and other developing countries in the years ahead.

Museveni, one of the more interesting speakers, began with the unconventional observation that from time immemorial, humanity has been dominated by two oppressions: oppression by nature through such elements as disease, drought, oceans that separate people and superstition; and oppression by other people through institutions such as feudalism, slavery, and colonialism.

Museveni argued that "human knowledge" is what we have used in our struggles against these two oppressions. Knowledge of the physical world has helped us protect ourselves from nature and to improve our lives. Additionally, he believed that while the advance of human knowledge has been historically accompanied by aggression and greed, "the instrument of liberation from oppression of man by man is uni-

versal access to knowledge." It is the lack of basic education that sets crucial limits to the absorption and use of knowledge by individuals and communities, according to Museveni.

### Working Sessions

There were 116 working sessions, each 90 minutes, clustered around seven conference tracks: empowering the poor with information and knowledge; policy and regulatory frameworks for the information economy; harnessing information and knowledge: infrastructure, capacity building and applications; fostering science and technology in developing countries; public information, civic dialogue and effective gover-

nance; life-long learning and distance education, and partnerships.

The "Call for Content" for working sessions received over 300 proposals for conferences sessions. Conference Secretariat Kerry McNamara pointed out that they worked hard to design the sessions to ensure the understanding that "knowledge comes in many forms, from many places." It was here that the wealth of experiences and diversity of programs were discussed.

The list of session topics was overwhelming. Each session typically had four panelists introducing the audience to an organization, a topic, a project, its methodology, or its findings. It was also in the working sessions that participants were sometimes most frustrated. So many topics to touch upon with so many speakers often meant that no single issue or speaker received sufficient time to do more than scratch the surface. In spite of a very impressive conference schedule, I often heard the comment, "Where's the beef?"

For example, the International Labor Organization (ILO) led a session on the "Impact of Information Technology on Jobs and Work: Good, Bad, or Both?" The four panelists worked at or with the ILO, which kept the session focused on its stated topic. It was clear from the follow-up questions that many people in the audience were as knowledgeable as the panelists and a single 90 minute session gave barely enough time to outline the myriad of issues.

Another interesting session I heard was titled "Knowledge Generation for and by the Rural Poor: Four Initiatives," organized by IFAD (International Fund for Agricultural Development). One of the initiatives worked with people in a rural village in India to solve problems related to seasonal poverty—the changing availability of food and other

## Virtual Global Knowledge Conference

THE ORGANIZERS OF GK97 KNEW IT WAS IMPORTANT TO NOT ONLY discuss the impact of information technologies, but to use these new tools before, during, and after the conference to facilitate and enhance the work that was being planned at the four-day conference in Toronto. Through the Global Knowledge Web site and discussion groups anyone with access to the Internet has the opportunity to participate in the debates surrounding the conference issues and to interact with other interested groups and individuals.

The Global Knowledge List began March 24, 1997 when the moderator posted the first welcoming message on the Internet and will be active for at least one year following the conference. Run by the Education Development Centre and hosted by the UNDP (United Nations Development Programme), the GK97 list revolves around "understanding the information revolution and its implications for

developing countries and the world's poor; in particular, how to empower the poor with information and knowledge." List members are drawn from throughout the world and discussions are able to explore a wide variety of topics in greater depth than possible in Toronto.

In addition to subscribing to the GK97 list, it is archived on the Global Knowledge Web site (<http://www.globalknowledge.org/mailarchives/>). Discussions are organized by month, and messages can be sorted by date, thread, subject, or author. A key-word search does a full text search through the entire archive.

To join the GK97 List, send an email to the LISTSERV host:

[majordomo@mail.edc.org](mailto:majordomo@mail.edc.org)

## NEW Power SCSI-3 System with Single or Dual Intel's Pentium® Pro Processor

- Dual Pentium® Pro Processor(s) Motherboard
  - Supports Up To 1GB RAM, EDO/ECC In 4-8 72-Pin SIMM
  - Or 512MB In 4 168 Pin DIMM Slots
  - Intel 440FX Chipset
  - Dual/Single Pentium® Pro Processor(s) 150/180/200MHz
  - 256K/512K Cache
  - Intel Heat Sink & Cooling Fan/Alarm B/B
  - 64MB 60ns EDO RAM Up To 1GB /64MB SDRAM up to 512MB
  - IBM 4.3GB Ultra Wide SCSI 5400RPM/512KB
  - Adaptec 2940/7880UW Ultra Wide PCI SCSI Controller
  - 2 Hi-Speed (16c550 Fast UART) Serials & 1 Enhanced Parallel
  - Mitsumi 1.44MB 3.5" Floppy Drive
  - Diamond Stealth 3d Virge 4MB EDO DRAM w/MPEG Screaming 64 Bit Graphics
  - ViewSonic G773 Monitor 17.0.26NI 1280x1024 66Hz Trinitron
  - Keytronic 104 Windows 95 Keyboard
  - Logitech Mouseman 3-Button Combo Mouse
  - Deluxe File Server Full Size Tower w/Open Side Door 300W/UL
  - NEC's 16x Speed SCSI 100ms 2400KB CD-ROM
  - Creative Lab Awe 64 Value PnP Stereo Sound Card
  - US Robotics Sportster 56 S/R Fax Modem
  - Intel EtherExpress Pro/100b PCI Network Card
  - 3D Stereo 360W Speaker System
- Pentium® Pro Processor 200 w/ASUS M/B.....\$3,685/3,154
- Pentium® Pro Processor 200 w/Intel M/B .....\$3,624/3,093
- Pentium® Pro Processor 200 w/Super Micro M/B.....\$3,538/3,007

- \*\*Windows NT 4.0 Workstation/Server-Setup & Tested .....Add \$160/Call

## NEW Enhanced IDE Pro System with Intel's Pentium® Pro Processor

- Intel Advanced/Vs Motherboard
  - Intel/AMI Flash BIOS, Zif Socket B
  - 3PCI, 3 ISA, 1 Shared Slot
  - Intel 440FX Triton Chipset Based Motherboard
  - Pentium® Pro Processor-150/180/200MHz
  - 512K/256K Cache
  - Intel Heat Sink & Cooling Fan/Alarm B/B
  - 32MB 60ns EDO RAM up to 128MB
  - Quantum 3.2GB Ultra DMA IDE Hard Drive
  - 2 Hi-Speed (16550 Fast UART) Serials & 1 Enhanced Parallel
  - Mitsumi 1.44MB 3.5" Floppy Drive
  - Expert S3 3D Virge 4MB EDO DRAM w/MPEG Screaming 64 Bit Graphics
  - Optique's V773 17" .26NI 1280x1024 Monitor
  - Qtronic 104 Windows 95 PS-2 Keyboard
  - Logitech 2-Button PS-2 Mouse
  - Deluxe ATX Form Medium Tower Case 230W UL CSA Power Supply
  - Toshiba IDE 24x Speed 90ms 3600KB CD ROM
  - Crystal 16-Bit Sound Card On Board
  - Pontech's 80Watt 2 Way Amplified Speakers
  - Diamond Supra 56K w/Voice S/R Fax Modem
  - Windows 95 Release 2 w/CD & Manual
- Pentium® Pro Processor 200 w/512K Cache.....\$2,644
- Pentium® Pro Processor 200 w/256K Cache.....\$2,043
- Pentium® Pro Processor 180 w/256K Cache.....\$1,722
- \*\*Microsoft Office Professional 97 .....Add \$165

## NEW Performance Ultra DMA System with AMD, Cyrix, Intel's Pentium® Processor

- ASUS's TX97-E Smart Motherboard
  - Intel's 430TX Chipset Based Motherboard
  - Supports Intel /Cyrix/AMD MMX Processor
  - PC 97 Compliant, ACPI Ready, Award BIOS
  - 3/PCI 4/ISA 1/ASUS Media Bus, 4/SIMM 2/DIMM Up To 256 MB
  - AMD K6/Cyrix 6x86/Pentium® Processor
  - Heat Sink & Cooling Fan
  - 512KB Pipeline Burst Cache
  - 32MB 60NS EDO RAM Up To 128MB
  - Quantum 4.3GB Ultra DMA IDE Hard Drive
  - 2 Hi-Speed (16550 Fast UART) Serials & 1 Enhanced Parallel
  - Mitsumi 1.44MB 3.5" Floppy Drive
  - Diamond Stealth 3d Virge 4MB EDO DRAM w/MPEG Screaming 64 Bit Graphics
  - Viewtronics 17".26NI 1280x1024 64Hz Window 95 Plug & Play Monitor
  - Keytronic 104 Windows 95 Keyboard
  - Logitech 2-Button Serial Mouse
  - Deluxe Medium Tower Case 250W Power Supply
  - Toshiba IDE 24x Speed 90ms 3600KB CD-ROM
  - Creative Lab Awe 64 Value PnP Stereo Sound Card
  - Surround Sound 240W Speaker System w/Subwoofer
  - Diamond Supra 56K w/Voice S/R Fax Modem
  - Windows 95 Release 2 w/CD & Manual
- AMD K6-233MMX .....\$1,907
- AMD K6-200/166MMX.....\$1,773/1,697
- Cyrix 6x86MX-PR200/166 .....\$1,696/1,653

## NEW Ultra SCSI Value Systems with Intel's Pentium® Processor

- Intel Advanced/TS Motherboard
  - Intel TC430HX Chipset Based Motherboard
  - PC 97 Compliant Including Windows
  - Supports Universal Serial Bus
  - Supports Intel MMX Processor
  - Support Pentium® Processor-120/133/166/200/233 MHz MMX
  - Heat Sink & Cooling Fan
  - 512K Pipeline Burst Cache
  - 32MB 60ns EDO RAM up to 128MB
  - Adaptec 2940/7880UW Ultra Wide PCI SCSI Controller
  - Quantum 3.2GB Ultra SCSI 5400RPM/ 512K Hard Drive
  - 2 Hi-Speed (16550 Fast UART) Serials & 1 Enhanced Parallel
  - Mitsumi 1.44MB 3.5" Floppy Drive
  - Diamond Stealth 3d Virge 2MB EDO DRAM w/MPEG Screaming 64 Bit Graphics
  - Impression 5VX 15" .28NI 1280x1024 Digital Monitor
  - Keytronic 104 Windows 95 Keyboard
  - Logitech 2-Button PS-2 Mouse
  - Deluxe ATX Form Medium Tower Case 235W UL Power Supply
  - NEC's 16x Speed SCSI 100ms 2400KB CD-ROM
  - Yamaha Opl3 Fm Synthesizer Stereo Sound Card
  - Pontech 80 Watt 2 Way Amplified Speakers
  - Diamond Supra 56K w/Voice S/R Fax Modem
  - Windows 95 Release 2 w/CD & Manual
- Pentium® Processor-233MMX.....\$1,974

## NEW W&K's Performance Multimedia System With AMD, Cyrix, or Intel's Pentium® Processor

- Intel 430VX Triton Chipset Based Motherboard
  - AMD K6/Cyrix 6x86/Pentium® Processor
  - Heat Sink & Cooling Fan
  - 512KB Pipeline Burst Cache
  - 16MB 60ns EDO RAM up to 128MB
  - Fujitsu 1.7GB Enhanced IDE 10ms Hard Drive
  - Mitsumi 1.44MB 3.5" Floppy Drive
  - S3 Trio 64 V+ 1MB w/MPEG Screaming 64-Bit Graphics
  - Techmedia 14.0.28NI 1024x768 60Hz Monitor
  - Qtronic 104 Windows 95 Keyboard-Serial
  - Qtronic 2 Button PS-2 Mouse
  - Deluxe Mini Tower Case 230W Power Supply
  - Toshiba IDE 24x Speed 90ms 3600KB CD-ROM
  - Opti Full Duplex Stereo Sound Card w/3D
  - Pontech 60W 2 Way Amp Speaker
  - Cyber 97 10 CD Pack
  - 97 Grolier Multimedia Encyclopedia, Internet Online, Cybersped, Family Dictionary, AI Unser Jr, The Real Deal, The Animals! 2.0, SMS Reference Library, Home Office Asst., Family Dictionary
  - Impression 33.6 V.34 S/R w/Voice Fax Modem
  - Windows 95 Release 2 w/CD & Manual
- AMD K6-233/200MMX.....\$1,151/1,017
- AMD K6-166MMX.....\$941

### CHEMBOOK 2700

- Intel Mobile Triton II Core Logic 430 TX Chipset
- Intel Pentium® MMX up to 233MHz
- 14.2" XGA TFT 1024x768x64K
- 64-Bit PCI Graphics w/ 2MB
- 512K SRAM L2 Cache Memory
- 16MB EDO RAM, upgradeable to 128MB
- 1.4GB Hard Drive (2.1GB Optional)
- Built-in 3.5" 1.44MB FDD
- Removable 20X CD-ROM
- Software MPEG Support
- Built-in 16-Bit Full Duplex Sound Card
- Two Type II/One Type III, ZV-port & CardBus Support
- User Removable Bus Master IDE Interface w/ up to Three HDs
- Full Size Windows 95 Keyboard (300 mm wide)
- Built-in Touch Pad Pointing Device
- Composite Video Output (NTSC/PAL)
- Smart Lithium Battery w/ Gas Gauge/SM8
- 12.6"x10.1"x1.8", 8lb w/ Battery & FDD

### Chembook 6800

#### Specifications:

- Genuine Intel Pentium® Processor
- 16MB RAM, Memory up to 64MB
- 64-Bit PCI Local Bus w/ Graphics Accelerators
- 12.1" Dual Scan or Active Matrix Color
- 1.44MB Removable Floppy Drive
- 1.4GB EIDE Removable Hard Disk (2.1GB Optional)
- PCMCIA Slots (3x Type II or 1x Type II and 1x Type III)
- Built-in PS/2 Touch Pad Pointing Device
- 16-Bit Stereo Sound System w/ Built-in Speakers & Microphone
- Internal 11X CD-ROM Drive
- Notebook Carrying Case
- Weight 7.5 lbs w/ NiMH Battery (Lithium Ion Battery Optional)
- Dimension 11.8"x8.9"x2.0"

### Chembook 9750

#### Specifications:

- Genuine Intel Pentium® Processor
- 16MB RAM on Board, Upgradeable to 80MB
- 12.1" Dual Scan or TFT SVGA, or 13.3" TFT XGA Screen
- 32-Bit PCU Video Controller w/ Graphics Accelerators
- 2MB EDO Video RAM
- 1.44MB Removable Floppy Drive
- 10X CD-ROM Drive, Exchangeable for FDD/Battery
- 1.4GB EIDE Hard Disk Drive (2.1GB Optional)
- Two Type II or One Type III PCMCIA Slots
- Built-in PS/2 TouchPad Pointing Device
- 16-Bit Stereo Sound System
- Carrying Case & NiMH Battery (Lithium Ion Battery Optional)
- Weight 6.5 lbs w/o CD-ROM Drive

# BIS Only One PC Can Stay With You Down Any Road—Nexar

## Nexar ISPA System Line

Nexar Authorized Reseller

## Nexar XPA<sup>PC</sup> System

Split design features include:

(1) replaceable CPU board (2) fixed I/O board (ISA/PCI)

Other features:

(3) upgradable CPU within motherboard family

(4) removable hard drive (5) Straddle Mount NLX Connector

(6) system memory—3 DIMM sockets (7) CD-ROM drive option

(8) tri-lock system secures CPU, I/O and drive storage

## Nexar-II Professional Multimedia

- Nexar-II Pentium<sup>®</sup> Multimedia System
- Intel Triton 430VX Chipset
- 32MB EDO RAM exp. to 128MB
- 512KB Synchronous Pipeline Burst Static RAM
- 1.44 Floppy
- 2MB S3 PCI Video Accelerator
- 3.2GB EIDE HD
- PCI EIDE I/O Controller w/USB
- 16X EIDE CD-ROM
- 16-Bit Sound Card By Nexar
- Stereo Amplified Speakers
- 33.6 Fax/Modem w/MNP 2-5
- Voice Mail/Phone Ans/Telephony
- 104 Key Windows 95 Keyboard
- PS/2 Ergonomic 2-Button Mouse
- Princeton EO50 15" Monitor
- Microsoft Windows 95 CD
- 3-Year Warranty/1-Year On-site

15" Princeton Monitor Included

resources during the year. Researchers worked closely with villagers to learn what happens over the year, how people confront this situation, and how knowledge is shared. Together, they defined the most critical factors and could prioritize the solutions that were compatible with the existing information and knowledge systems. In this particular case, poverty was heightened when water was not available for a second planting cycle. The solution that was compatible with the social relations in the village was a community well.

## Communication

Digital technologies where the primary focus at GK97, but these are not necessarily the most important methods for communication and knowledge sharing throughout underdeveloped countries. In reality, the networked global village is not very large—it is important to keep in mind that 85% of the world's population has access to only 16% of the world's phone system. This was especially true in the context of Africa. Not only is Africa the largest region of the globe that is least connected to the Internet, phone lines are practically non-existent in large parts of the continent. More phone lines, for example, exist in Manhattan than across all of Sub-Saharan Africa.

While people may not have all the knowledge needed to escape poverty, systems for communicating and sharing knowledge exist in every community. Less than a handful of topics for the working sessions examined these systems, such as radio or television. In addition, while many international development workers recognize the importance of traditional knowledge systems—such as the role of tribal elders as the keepers of history—there was only one session on "Traditional Knowledge in the Information Age." Since all the panelists in that session represented Native Americans within Canada,

many of the world's traditional cultures and knowledge systems were not represented or discussed at Global Knowledge '97. Many important questions were left unexplored: How is information and knowledge currently accessed and shared? What are the best ways to enhance and expand existing methods of communication? When the Internet does arrive, what will its impact be upon these other methods?

## Reflections

Global Knowledge '97 was a conference about social policies and programs, not technology. Before arriving in Toronto, I was excited about the prospect of a conference that focused on actual experiences and policies and would outline what does and doesn't work. It is important to examine the social impact generated by the growing proliferation of new information and communication technologies. This is especially true for people who are developing policies and implementing programs to address issues of educational programs and rural health care services, and telecommunication infrastructures in underdeveloped countries. Many tough questions need to be addressed without letting the tools—the technology—define your social goals.

However, while economic and social policy issues demand our attention, technology considerations cannot be easily set aside. The relationships between information, technology, and social policies are deeply intertwined.

The tools of the Information Age are still under construction. Broad access to the Internet is less than a decade old, and remains limited in many parts of the world, for technical as well as economic and political reasons. Unlike radio and television, ICT is not a mature, stable technology. How we access the Internet (satellite, radio, wire), at what speeds (56K, 256K 1.5Mbps), and even on what type of devices (notebook, subnotebook, PDS, cellular phone)

impacts policies, programs, and budget projections—and, in return, those policies influence the development and implementation of tomorrow's technology. Technology is changing so rapidly, it is dangerous to accept what it can and cannot do as static.

During the conference, I kept asking myself where were individuals, such as Brenda Laurel, who examines issues of gender and software design? Or people like Dave Hughes and Dewayne Hendricks who are building systems to provide Internet access to rural and indigenous communities? Or those, such as Howard Rheingold, who have a wealth of experience on creating virtual communities that share knowledge that helps solve local problems?

There is an important interrelationship between the development and shaping of new technologies—new tools—and the social, economic, and political environment in which technology usage policies are designed. Global Knowledge '97 confronted a vast array of interesting and critical issues. Unfortunately without a clear understanding of the capabilities, limits, and potentials of information and communication technologies, participants could not fully achieve the goal of "harnessing the information revolution for economic development, social cohesion, and poverty alleviation in the 21st century." ■

## Alternative Conference—Local Knowledge

RUNNING PARALLEL TO GK97, THE TORONTO MEDIA COLLECTIVE organized a counter event called "Local Knowledge—Global Wisdom." The purpose of this two-day gathering held at the University of Toronto, was "to discuss the emerging global economy and the role of information technology in the development and operation of the 'Global Village'".

Although the words are similar to the goal for the Global Knowledge conference, this alternative event was open to the public and focused on grassroots initiatives. As the organizers explained on the Local Knowledge Web site (<http://www.tao.ca/earth/lk97/>), "Part of the drive behind Local Knowledge is to

expose what is really transpiring at the global level, as well as discussing the opening for local organizing, action, and self-determination."

The agenda was divided into three main sessions:

- The Narrative: What's going on—deconstruction the global corporate agenda;
- The Environment: How are we living, articulating, and celebrating alternatives;
- Tools for Action: Building local responses to globalization.

Approximately seventy-five people participated, including about a dozen who also attended Global Knowledge. Participating organizations included: TAO Communications, Information Highway Working Group, Citizens for Local Democracy, Marshall McLuhan Program University of Toronto, Citizens Concerned for Free Trade, and others. Food Not Bombs provide a free, vegetarian lunch.

## Call for Pentium 166/200/233MHz/MMX upgrade

**DIAMOND**  
MULTIMEDIA

Dear Derek,

Thank you for lending us the Pentium 133MHz systems for the CGDC (Computer Developer Conference) and WINdex (Windows hardware engineering conference) shows. The systems were great and were very reliable. I also appreciate the Pentium P166MHz systems that you were able to put together within a few hours.

Once again, I like to thank you, and your staff for your invaluable contribution.

Ken Wu  
UMiracle Microsystems  
44063 Fremont Blvd.  
Fremont, CA 94538

UMiracle is the system provider we choose when we are looking for desktop personal or our company. As a software developer, we are continually seeking the latest technology enhance our computing environment. We have purchased most of our new desktop PC UMiracle over the past few years, and these systems have been very reliable and give us a lot for our spending dollar. We have also utilized UMiracle's technical engineering staff in upgrading of our systems, which is very good in suggesting a variety of choices in the up process. We choose UMiracle for its helpful and responsive sales team, knowledgeable staff, and overall competitive pricing.

UMiracle is a computer hardware vendor that stands out, and fulfills our computing needs in a responsive manner. When it comes to technical difficulties, UMiracle stands behind their products and provides efficient and prompt support.

## ASUS P2L97 Pentium II AGP

- ASUS P2L97 Intel Pentium II motherboard - 233-333MHz support, 440LX AGPset with Accelerated Graphics Port Connector for optimal Video Graphics, 5 PCI/2 ISA/1 AGP slots, DIMM, Onbrd I/O, UltraDMA PCI IDE, ATX format

INTERNATIONAL AND AREA STUDIES  
OFFICE OF THE DEAN

BERKELEY, CALIFORNIA 94720  
FAX: (510) 642-9466

Tuesday, July 2, 1996

Over the last two years, the International and Area Studies division of the University of California at Berkeley has been using UMiracle Microsystems computers for their workstations and servers. UMiracle has been our best choice for highly competitive pricing, proven customer response time, and system reliability.

When servicing our own customers, having a computer vendor whose sales and technical teams are quick to respond is very important. UMiracle (and Ken Wu, in particular) has consistently surprised me with their timely and accurate responses. This has often beaten out other vendors who either take their time in responding to calls or never return them in the first place. When it comes to technical difficulties, UMiracle stands behind their products and provides the best support possible promptly.

In addition, UMiracle computers have been highly reliable for their competitive pricing. Often companies worry if they will obtain quality products when they purchase computers at good prices.

## ASUS P2L97-DS Dual PII AGP

- ASUS P2L97-DS Intel Pentium II motherboard - 233-333MHz Dual Pentium II support, 440LX AGPset with Accelerated Graphics Port Connector for optimal Video Graphics, onbrd Adaptec 7880 U-Wide SCSI, 5 PCI/2 ISA/1 AGP slots, DIMM, Onbrd I/O, UltraDMA PCI IDE, ATX format
- Genuine Intel Pentium® II Processor(s) w/Cooling Fan(s)
- 32MB 168Pin 10ns SDRAM DIMM
- 1.44MB Floppy Drive
- 3.2GB Quantum FireBall ST33260S Ultra-SCSI-2 HD
- Mitsumi FX162T 16X Speed Internal ATAPI IDE CD-ROM
- Sound Blaster Compatible ESS 16Bit PnP Stereo Sound Card
- ATI 3D ProTurbo PC2TV 4MB SGRAM Video Card

## OUR SERVICE, OUR COMMITMENT

- All our computer systems are pre-built, tested, and switched on, pre-configured. Windows 95/NT 4.0 or other software installed for testing purposes. High resolution video monitor mode tested and continuously burned in for 48 hours on all components and finally inspected for trouble-free operation. All systems are to be inspected by customer at pick up time.
- Most advanced standard configurations have been pre-built, burn-in tested and are ready to be picked up or delivered within 60 minutes IN FREMONT MAIN OFFICE - Please allow more time for minor configuration changes. Standard delivery time is 72 hours. Free delivery area includes local area within 30 minutes driving distance. No delivery on weekends. Delivery out of local area will be charged up to \$30 freight.
- Most components come with over 1 year manufacturer warranty - First year will be covered by UMiracle. Warranty after the first year will be covered by component manufacturers.
- While-you-wait immediate service should there be any necessary warranty repair. If we couldn't solve the problem, another system will be built (at our discretion, if purchased within 30 days).
- All pickups, repairs, exchanges, upgrades can be done in either Fremont, Belmont or Albany store. Original invoices & records.

1035 San Pablo Ave., Ste. 1  
Albany, CA 94706

To whom it may concern:

We have been delighted to have UMiracle as our sole provider of computer hardware for our 7 server, 100+ user wide area network over the past 3 years. They are very reliable and extremely courteous. In addition to superb service, salespeople and knowledgeable and (most importantly) accessible support have been extremely helpful.

During the past year our organization has grown from approximately 20 PC's to approximately 75 PC's with several laptops and 5 file servers distributed or supplied virtually all of our hardware. In the health care management industry, data is of the utmost importance and the hardware supplied by UMiracle is reliable. In a few rare instances when there has been a problem with configuration, hardware was promptly and promptly replaced and helpful technical support was available.

UMiracle succeeds in all three of the most important aspects of a computer hardware vendor: excellent support and competitive pricing, and we will continue to rely on you.

Spide Chan  
UMiracle Microsystems  
44063 Fremont Blvd.  
Fremont, CA 94538

UMiracle is the computer product provider we choose when we are looking for computer hardware or software for our company. As a validation engineer, we are continually seeking the latest technology as we enhance our testing environment. We have purchased most of our new hardware & software from UMiracle over the past few months, and these products have been very reliable. We have also utilized UMiracle's technical engineering staff in the product choosing process which is very good in suggesting a variety of choices and cost effectiveness. We choose UMiracle for its helpful and responsive sales team, knowledgeable technical staff, and overall competitive pricing.

UMiracle is a computer product vendor that stands out, and fulfills our computing needs in a responsive manner. When it comes to technical difficulties, UMiracle stands behind their products and provides efficient and prompt support.

# What is RAID?

RAID is an acronym for Redundant Array of Inexpensive (or Independent) Disks. A RAID array is a collection of drives which collectively act as a single storage system, which can tolerate the failure of a drive without losing data, and which can operate independently of each other. Among all RAID implementations, RAIDport, the latest Adaptec RAID 5 solution, is the most cost-effective way to protect your data. If the data in your file server is vital to your survival of your business, RAID-5 is the way to go!

## RAID-5 Pentium Pro<sup>2</sup> Server

- iWILL DP6NS Dual Pentium<sup>®</sup> Pro processor-based board w/Built-in Adaptec<sup>®</sup> PCI SCSI chipset 7880 (AHA-2940UW Ultra Wide SCSI), 50Pin Fast SCSI-2 & 68Pin Ultra Wide SCSI (40MB/s Burst) with optional RAID support, Intel 440FX chipset, ZIP Socket 8, 150-233MHz, 3 PCI+4 ISA slots, FP or EDO 72Pin SIMM & support upto 512MB, built-in PCI-IDE interfaces, FD, 2-16550 UARTs, ECP/EPP, support 4 IDE HDs, PnP, 50pin SCSI + 68pin Wide SCSI + FD/HD/IO cables, PS/2 mouse port & EZ-SCSI V4.0L + complete Adaptec<sup>®</sup> software driver & manual included

- TYAN Thunder-2 ATX SI696DLUA Dual Pentium II 233-300 MHz System Board - 1 AGP+5 PCI+2 ISA Slots, 4 168Pin DIMM for Max 1GB, Onbrd Adaptec dual channel U-Wide SCSI with RAIDport option, Yamaha PCI WaveTavie sound, Super IO/FD/IDEs/USBs/PS/2, Flash AMI BIOS
- Intel Pentium<sup>®</sup> II CPU(s) w/ Cooling Fan(s)
- 64MB 168Pin 10ns SDRAM DIMM
- 1.44MB Floppy Drive
- Three 3.2GB Quantum FireBall ST33260S Ultra-SCSI-2 HDs
- Mitsumi FX162T 16X Speed Internal ATAPI IDE CD-ROM
- Trident 9680 PCI 1MB MPEG+AVI Video Card
- 14" ShamRock 1Kx768NI Pwr-Saving Monitor
- GigaStar ATX style Medium Tower 235W ATX PS
- KeyTronic 104 Key Win95 PS/2 Keyboard
- MicroSoft Ergonomic Serial Mouse w/ Pad

**Single Pentium II**  
233MHz \$3133  
266MHz \$3294  
300MHz \$3679  
**Dual Pentium II**  
233MHz \$3677  
266MHz \$3997  
300MHz \$4769

## NT ENHANCEMENTS

NT Enhancements! All hardware listed below are guaranteed to be NT V4.0 compatible. We will make it right or your money back!

- **Memory**
  - 16/32/64/128MB 10ns SDRAM UnBuffered 168Pin DIMM for 430VX/TX ..... \$Call
  - 16/32/64/128MB 60ns DRAM ECC EDO Buffered 168Pin DIMM for 440FX ..... \$Call
- **RAID 5 Fast Ultra Wide SCSI-2 Host Adapter**  
(for RAID-5 implementation, an IDE HD as boot drive is recommended)
  - DPT SmartCache IV SCSI Adapter & RAID Series/SmartRAID IV RAID Series ..... \$Call
  - Mylex DAC960 Series Hi-Performance PCI RAID Controller with upto 3 UW SCSI channels supporting 45 HDs, upto 64MB Cache installable ..... \$Call
  - AMI Complete MegaRAID Solution including: SCSI RAID level 0,1,3,5,10,30, and 50 PCI Disk Array Controllers/FlexRAID/Advanced Management Software/Advanced Enclosure Management/Boot-Up Configuration/Power Console/General Alert ..... \$Call
- **TapeDrive - HP DAT DDS/DDS-2 Drive (Sold & integrated with system only)**
  - HP DAT C1534 DDS DAT Tape Drive (2GB on 90m Tape) ..... \$540
  - HP DAT C1536 DDS DAT Tape Drive w/DCLZ Hardware Compression (4GB on 90m Tape with compression) ..... \$605
  - HP DAT C1599A DDS-2 DAT Tape Drive w/DCLZ Hardware Compression (8GB on DDS-2 format with compression) ..... \$779
  - HP DAT C1553A DDS-2 Autoloader w/DCLZ Hardware Compression (48GB on DDS-2 format with compression) ..... \$2010
  - Seagate 32GB DAT DDS-2 Autoloader 4586NP (4 DAT Tape Support) ..... \$1235
  - Optional 12 Tape Magazine for above 4586NP upto 96GB (no tape) ..... \$135
- **High End Video Card - 3D Rendering/Graphic Animation/OpenGL**
  - Symmetric Glyder MAX/TX-16/TX-40/MP-40 3D Accelerator ..... \$520/\$1790/\$2245/\$2520
  - Dynamic Pictures Oxygen102/202/402 ..... \$985/\$2075/\$3655
- **Server Chassis (T-101/Disk Array Chassis (T-103): Dimension=13"x31"x22"**  
w/Dual Redundancy & Hot Swappable Power Supplies ..... \$880/\$880
  - T-101: 12 DriveBays/Upto 2 PowerSupply 2x300W 2x4.6" Smart Fans w/ Efficient Air Flow Full Size AT Motherboard FormFactor
  - T-103: 16 DriveBays/Upto 2 PowerSupply 2x300W 2x4.6" Smart Fans w/ Efficient Air Flow Perfect RAID Disk-Array Sub-Chassis
- **Server Chassis LT-18 By Axxion w/o Power Supply.....\$480**
  - Full-size AT, Baby AT, oversize AT based boards, 11 drive bays (one 3.5" and four 5.25" exposed, six 5.25" hidden bays), Twelve slots, "snap-in" drive rails, secondary cooling fans, accepts standard power supply.
  - Dimensions: 26" x 10" x 24.5" (DxWxH).
- **Server Enclosure KS-1400 w/ Dual Redundant Hot-Swappable 300Wx2 PS.....\$990**
  - Full-size AT, Baby AT, oversize AT based boards, 14 5.25" drive bays, Twelve slots, "snap-in" drive rails, 8 cooling fans, Dimensions: 20.5" x 16.25" x 23.75" (DxWxH)
- **CD-ROM Tower Subsystem Chassis**
  - 7 Plextor 20X PX-20TSI w/250W PS ..... \$2039
  - 7 Toshiba 15X XM-3801B w/250W PS ..... \$1255
  - 7 Toshiba 12X XM-5701B w/250W PS ..... \$1085
- **UPS Un-interrupted Power Supply**
  - APC SmartUPS 420VS 420VA 4 minute Full 9 Minute Half load 4 outlets ..... \$269
  - APC SmartUPS 650VS 650VA 5 minute Full 11 Minute Half load 4 outlets ..... \$325
  - APC SmartUPS 1000VS 1000VA 6 minute Full 15 Minute Half load 6 outlets ..... \$455
  - APC SmartUPS 1400VS 1400VA 7 minute Full 19 Minute Half load 6 outlets ..... \$599

UMiracle Microsystems  
44063 Fremont Blvd  
Fremont, CA 94538

UMiracle is the computer hardware or a continually seeking the best purchased most of the products, and these products are of the highest quality. We are a technical engineering firm suggesting a variety of products and responsive sales team pricing.

UMiracle is a computer product vendor that stands out, and fulfills our computing needs in a responsive manner. When it comes to technical difficulties, UMiracle stands behind their products and provides efficient and prompt support.

We will continue to look to UMiracle for providing quality and reliable products at very low prices.

- 10 + ONE NETWORK SOLUTION
- TEN ASUS TX97 AMD-K5 166MHz WorkStations w/Licensed Windows 95
  - ONE ASUS P2L97 Pentium II 266MHz AGP File Server w/25 User Licensed NT4.0 Server
  - (See Previous Pages for Workstations and Server Configuration Details)
  - ELEVEN Intel EtherExpress 100BaseT PCI Network Interface Adapters Installed
  - HP LaserJet 5N WorkGroup Printer w/10BaseT Connection to Server
  - 3COM 3C250B-TX 12-Port 100BaseT Stackable Hub
  - APC Smart-UPS VS420 Un-interruptible Power Supply w/ Setup
  - Up to 1100' Cat5 100BaseT UTP Cabling (InWall w/ Plates - 11 Nodes)
  - OnSite Windows NT WorkGroup Network-Resources and Printer Setup

Recommended Options:  
- Internet Access + EMail Solution  
- 3 KeyStroke Recovery Backup Solution  
- Fax Server Solution  
- Network User + Administrator Training  
- 6 Month 8-Hour Response Service Maintenance Contract

## INTERNET ACCESS+EMAIL SOLUTION

INTERNET PROVIDES POWER TO BUSINESS USERS LIKE YOU! EXPLORING YOUR IDEA, GO TO INTERNET! RESEARCHING YOUR PROJECT, GO TO INTERNET! MAKING AN INTERNATIONAL CALL, GO TO INTERNET! ONCE YOU HAVE IT, YOU WILL HOOK ON IT. AND TO HOOK ON IT CHEAP, YOU NEED ISDN INTERNET ACCESS FROM U MIRACLE. WE WILL SETUP YOUR ISDN LINE, GET YOU THE RIGHT ROUTER, SETUP YOUR ISP ACCESS ACCOUNT, SETUP YOUR EMAIL ADDRESSES, CONFIGURE YOUR NETWORK WITH TCP/IP PROTOCOL, ALL FOR ONE PACKAGE PRICE! CALL U MIRACLE NETWORK SOLUTION FOR DETAILS!

## 3-KEYSTROKE RECOVERY BACKUP SOLUTION

YOU THINK YOU GOT IT ALL BACKED UP? NOT UNTIL THE DAY YOUR SERVER CRASHES YOU WILL FIND OUT YOU HAVE TO 1.) TROUBLESHOOT AND REPLACE YOUR DEFECTIVE COMPONENTS, 2.) RELOAD YOUR NOS, DRIVERS, APPLICATIONS AND BACKUP SOFTWARE, 3.) RESTORE YOUR DATA FILES FROM BACKUP, 4.) RECONSTRUCT YOUR USER AND PRINTER ACCOUNTS, AND 5.) EXPECT MISSING AND CORRUPTED DATA HERE AND THERE! WHY? BECAUSE YOUR BACKUP SOFTWARE BACKS UP ONLY DATA FILES, NOT THE OPENED FILES, NOT THE SECURITY DATABASE OR PARTITION INFORMATION! BACKUP SOFTWARE DON'T MAKE SENSE UNTIL NOW! With REPLICA V3 by STAC, you can BACKUP YOUR HARDDRIVE PARTITIONS AS OBJECTS, RESCUE YOUR DISASTER WITH 3 KEYSTROKES FROM A RECOVERY DISK, EVEN FROM A LOW-LEVEL-FORMATTED HARDDRIVE, AND BRING YOUR SERVER UP IN HOURS! TO FIND OUT HOW WE CAN PROVIDE THIS SOLUTION, CALL US NOW!

## FAX SERVER SOLUTION

DON'T WAIT IN LINE FOR YOUR TURN TO FAX, DON'T HAND-WRITE YOUR COVER PAGE! FAX DIRECTLY FROM YOUR DESKTOP, NEATLY AND PROFESSIONALLY! WITH THE RIGHT FAX SOLUTION, YOU CAN RECEIVE YOUR FAX AND PRINT RIGHT TO YOUR LASER PRINTER, REPRINT YOUR 6 MONTHS OLD FAX, FAX YOUR DOCUMENTS FROM YOUR WINDOWS APPLICATION JUST LIKE PRINTING. ALL VIA ONE LINE, ONE MODEM! FORGET ABOUT BRINGING A LINE AND A MODEM TO EVERY DESKTOP! WITH WINFAX PRO FOR NETWORKS (NON-DELEGATED) AND SATISFAX FAXBOARD, AND U MIRACLE NETWORK SOLUTION TECHNICAL EXPERTISE, WE SURE CAN GET YOU THE BEST SOLUTION! CALL US FOR DETAILS!

**WE MONITOR THE TRENDS OF EVERY TECHNOLOGY IN THE INDUSTRY AND GET YOU THE BEST! GUARANTEE WE WILL TAKE IT BACK IF IT DOESN'T WORK!**

# Online Guide

INTERNET • BY JOHN S. QUARTERMAN

## Spam Block

### Tools Vs. Rules

**There is** some good news about spam.

Nò, not laws against it.

### Okay, Let's Talk About Laws

Yes, some laws are being passed. I shudder to think what they will turn out to be like, since it is so easy to misunderstand the problem and end up with laws against content instead of laws against types of distribution.

Many of us have just spent a lot of time over the past couple of years defending free speech on the Internet all the way to the Supreme Court (<http://www.mids.org/mn/707/cda.html>), and we'd just as soon not have that hard-fought victory compromised by hastily written laws.

Besides, the place spam will have to be stopped is on the Net. That means by the ISPs, since the way spammers manage to spew their trash is by abusing ISP facilities. It takes sizeable facilities to send a big spam, and the average spammer doesn't have them in-house.

Spam that already is illegal under laws against fraud or pyramid schemes can be dealt with under those laws. For example, if a spam recommends using the US Postal Service to buy a report that turns out to be fraudulent or that is part of a pyramid scheme, you can report that to your local US Postal Inspection Service office; just call your post office for the address, or try <http://www.usps.gov>. They have literature that

defines types of illegal postal activity; they investigate each complaint and involve federal law enforcement agencies if necessary. Thanks to Barb Dijker for this pointer.

As you know, I'm not averse to suing, and our lawsuit against a spammer (<http://www.mids.org/nospam/>) continues to proceed at a legal pace. John Levine remarks:

"I also expect that lacking something like the Smith bill now in Congress, we'll be seeing increasing numbers of indirect mailbombings like the *flowers.com* one. At *abuse.net* I have a growing list of domains that I have to special case because they get large numbers of complaints due entirely to forged return addresses."

John is doing us all a major service updating (<http://spam.abuse.net>) and I don't disagree with his point.

But going "there oughta be a law" or even using existing laws won't stop spam as it hap-

pens. Only ISPs can do that. And laws alone won't stop spam, any more than laws have stopped the heroin trade. No doubt there will be laws against spam. But they won't be worth the paper they're written on without public opinion behind them and ISPs to back them up. So let's just go ahead and do it without waiting for new laws.

### Examine The Problem To Solve It

Here is a sample complaint message about one spam that got through. You may have seen the spam in question; it claimed to be From: *Selective.Marketing@zilker.net*.

"I have received over 300 messages like the following, and would appreciate it if you could stop whatever service or user is sending this asap. I have tried to reach the domain contact for *zilker.net* by phone, but have been unsuccessful.

**Some laws are being passed.**  
I shudder to think what they will  
turn out to be like, since it is so easy  
to misunderstand the problem and  
end up with laws against content instead of  
laws against types of distribution.

## Internet *continued...*

If this continues, I will be reporting it to CERT, as it is starting to cause performance problems with both my system and our mail hubs."

I've filed off the identity of the person complaining because that's not relevant; suffice it to say that the mail hubs in question are inside a very large Internet technology company. Take it

as evidence of the real cost of spam.

Another complaint claimed to have seen 6,000 copies of this spam pass through their equipment. The spam message claimed to have sent 100,000 messages. And some spammers claim to send even more, up to tens of millions of messages. Spam is not a small problem.

Why did the amount of spam increase? Because other ISPs had taken to implementing ever more powerful spam filters, causing spammers to search out and abuse ISPs that hadn't kept up in the technological arms race. (A few months in this arms race is like a decade in the old Cold War arms race.) Also, the amount of spam in general has increased, because of more spammers and more sneaky spam software; some spam is even sent from a new IP address each time. It's hard to recognize spam, either by headers or by remote sender in the envelope address or the remote IP connection.

Even figuring out who to complain to can be very difficult. Lots of people simply believe the From: or Reply-To: headers, which does little good, since spammers almost always forge those. Many people believe the Received: lines, which can be very misleading, since spammers often forge those, too, to make it appear that the spam originated or passed through nodes that weren't involved.

Often even worse is when people do correctly determine the ISP involved in doing the mass-mailing, but don't realize that the ISP is usually just as much a victim as the recipients. This last half-perception often leads complaining people to either flame the ISP or to assume the ISP itself is a villain and to send mail to contacts at the ISP's nameservers or the ISP's contact names listed in its WHOIS record.

Such complaints are almost always counterproductive, since every ISP has to have addresses dedicated to support issues, such as *postmaster@domain*, *support@domain*, or the like, and those aliases will reach somebody who can do something much faster than sending mail to arbitrary individual addresses. In other words, sending mail to the administrative contact for the ISP usually just slows down any effect a complaint might have and annoys the recipient.

Of course, that may be the exact goal of some spam, since there is evidence that sloppy spam like the *Selective.Marketing@zilker.net* one mentioned above is intended to blacken the name of an ISP that has in some way opposed spam.

## A New Spam Filter

Fortunately, technology on our side has gotten better, too. Eric Allman keeps the latest sendmail hacks against spam available at

## Internet *continued...*

(<http://www.sendmail.org>). They include the one we mentioned in a previous column that Jump Point Communications (JPC) (<http://www.jump.net>) had installed.

Most previous spam filters used by ISPs have tended to let in mail from everywhere except a list of known spammers. The new spam filter that JPC installed prohibits incoming mail except for local delivery or from known foreign

IP addresses (either hosts or networks). If you're sending mail from a host with a domain name that matches that of the ISP or is on a list the ISP permits, you can send mail to anywhere you like. If you're sending mail to the ISP or one of its customers, that's no problem. But if you try to send mail *through* the ISP to some location that does not match those qualifications, as spammers frequently do, you're out of luck.

## *The place spam will have to be stopped is on the Net.*

That means by the ISPs, since the way spammers manage to spew their trash is by abusing ISP facilities.

It takes sizeable facilities to send a big spam, and the average spammer doesn't have them in-house.

## Complications

This new method is a bit unfortunate, since it requires the ISP to find and list every remote IP address every customer is using to send mail through the ISP. But you'd be surprised how fast an ISP customer will come forward and tell the ISP such information as soon as the customer discovers outgoing mail is blocked. So composing a list of known customer mail-sending addresses is not that hard. It's much easier than trying to identify and add each new spam source as spammers continually add new ones.

There's also an unfortunate complication for a few legitimate ISP users, who used to use the ISP as a mail relay but connected to the Internet through some other dialup connection (for example because they were travelling). That won't work anymore. Such a customer will have to send mail through the local mail relay for whatever ISP they're using to connect.

## Register your domain name now!

Domain names are going at over 165,000 per month. By tomorrow yours may be gone! If you don't use your domain name now, save it for later.

**.COM .ORG .NET**  
**\$39.95\* Guaranteed!**

- Registration of Domain Name with InterNIC
- Free E-mail Now! E-mail forwarding
- Primary and Secondary Serving
- No Charge for Resubmissions

 Without a domain name, your e-mail address would look something like:  
**yourcompany25343@aol.com**

and your Web site would look like:  
**www.aol.com/~yourcompany/home.html**

 With a domain name, your e-mail address could be:  
**you@yourcompany.com**  
and your Web site would look like:  
**www.yourcompany.com**

\* InterNIC Fee

The InterNIC is the organization set up by the US Government to administer all .com, .net, and .org domain names. Their fee is \$100.00, which covers 2 years of maintenance.

## Satisfied customers including the following worldwide corporations:

- Ford
- Oracle
- Calvin Klein
- Jaguar
- Austin Martin
- Baxter Healthcare
- Chrysler

**FREE HOME PAGE NOW! Web-site**

## Corporate Services

"Protect your name overseas!" We can register your domain name with foreign domains. Spend hundreds now to save thousands in IP lawsuits later!

## InterNIC Premier Partner

Means we can provide immediate solutions to your InterNIC Domain Name needs.

This bill is mailed to you around 20 days after your domain name is confirmed. After 2 years InterNIC will bill you \$50.00/yr. Everyone must pay the InterNIC fee.

# Free Internet Access

FOR EVERY NEW MEMBER YOU REFER,  
YOU WILL GET A MONTH OF **FREE** INTERNET ACCESS.  
IT'S THAT SIMPLE.

No catch, no strings - the program is open to all EarthLink members.

Every month, we give thousands of our members free access. In fact, some of our members refer so many people, they never have to pay for their Internet access.

Our free access program is just one of many benefits EarthLink members enjoy. If you're not getting free Internet access from your current provider, give us a call.

**1-800-319-9638, ext. 102**

## What's Not Affected

Incidentally, this filter applies to sending mail, not to receiving it, nor to picking it up with a protocol such as POP, the popular Post Office Protocol. A customer such as that just describe above can still pick up mail from the ISP regardless of how the customer is actually dialed up.

Now if your location is not an ISP, there's not much point in installing this kind of filtering at your location, since you probably want to simply prohibit pass-through mail from anywhere anyway. And most spam is redirected through ISPs anyway, since spammers know ISPs have to permit some pass-through mail from non-local locations, because ISP customers demand that capability. So by the time spam reaches your organization, it's usually addressed to somebody inside your organization anyway, and this new filter won't block it.

## Soon Come

But this kind of filtering is still good news, because it is very effective when used by ISPs. And it is good news because many ISPs are using it. It seems the tide is turning. Spam is becoming sufficiently socially unacceptable that responsible ISPs block it. And the blocking software is getting very good. So good that even irresponsible ISPs that permit spamming by their customers are not going to be able to pol-

lute the Internet much longer.

The really good news will be when the irresponsible ISPs go out of business because nobody but spammers will buy from them anymore, or change their policies to stay in business.

Soon come. ■

Copyright © 1997 MIDS (512)451-7602, fax: (512)452-0127. 1106 Clayton Ln., Ste. 500W, Austin, TX 78723 USA.

## Why did the amount of spam increase?

Because other ISPs had taken to implementing ever more powerful spam filters, causing spammers to search out and abuse ISPs that hadn't kept up in the technological arms race.

## Martha Online?

### It's A Branding Thing

#### Martha Stewart

*Living* (MSL) magazine is furiously filling its pages with feature articles on "Exploring the Internet," to help Martha's minions learn the basics of getting onto and using the Web reasonably well. In fact, if you or your spouse follow Martha, you already know that, in October, her Emmy-winning TV show of the same name included an entire week's worth of segments on navigating the Internet.

Why drop the knitting for all of this fuss?

The reason is the launch of her brand-name Web site (<http://www.marthastewart.com>) that debuted September 8th. In a powerful integration with other Martha Stewart media, including her new daily-format television show, her Westwood One radio show "askMartha," and her monthly magazine, the Martha Stewart Web site provides a ton of updated information, online resources, and supplements to all of MSL Omnimedia's productions. It's a great glimpse into the future of how other companies will be integrating the Internet with other "broadcast" to market their household-name brands.

I love that word, "brand." Think of a steer. Think of a white hot iron with an MSL logo on it. Sssss. Mooo! This way the ranchers know their stock from the other guy's.

Now, think of large herds of steer—shopping at the mall. Sssss.

We've all been branded. I'm so bad, I can't walk past the Warner Brothers store at the mall without buying some goofy baseball jersey with Bugs Bunny on it. It's safe to say Warner Brothers knows I'm theirs; and have been since I could turn on a television. Like Indy racing cars covered with logos for STP, Marlboro, UMAX, Pennzoil, or A-1 Sauce, our psyches and cloth-

*The Martha Stewart Web site provides a ton of updated information, online resources, and supplements to all of MSL Omnimedia's productions. It's a great glimpse into the way other companies will be integrating the Internet with other "broadcast" to market their household-name brands.*

ing are literally branded by hundreds of marketers who've made claims. Maybe there's still room on the inside of our sagging biceps for Martha Stewart.

The Martha Stewart Living Web site, developed in conjunction by MSL Omnimedia and Microsoft, is loaded. There's a TV Program Guide that provides detailed instructions and

sources and "field trips" for where to find the right ingredients for the various household projects that appear on the television segments. Plus there are listings of the upcoming two-week schedules so you could even get the ingredients in advance and cook or sew along with the TV presentation. The Program Guide also lets you set up an email message service that will alert you to upcoming topics you specify. You can even download video clips from upcoming shows.

The What's New area keeps you in touch with Martha Stewart Living Omnimedia so you can keep up on new books, themes for upcoming magazines or television shows, or find daily transcripts from the nationally syndicated "askMartha" radio show. Martha-By-Mail lets you browse products previously sold exclusively through the Martha-By-Mail catalog. Plus there's a kitchen full of other "Martha" merchandise available online, from cake decorating kits and

pressed-glass cake stands, to seasonal cookie cutters, or wedding organizers, garden gloves, and fern botanical prints. Each has its own photo and description. Just click when you're ready to Mooo.

The "About Martha" section features more than you want to know—about Martha, of course. You can view her up-to-the-minute

weekly calendar including her public and TV appearances, plus her gentle nagging about seasonal household and garden tasks, like "11:10 pm—harvest summer corn." There'll also be answers to the FAQs about Martha.

The Guest Book area will let you register, choose a screen name and password so you can participate in the Meeting Place forums that include posting questions about gardening, crafts, or sharing household tips and recipes. Registration also lets you enter MSL-branded sweepstakes and receive personalized TV reminders.

Her advertisers have got to love this integration, attention to detail and the round-up of the dogies into the stockyard pen. And it appears they do, as charter ranchers to the MSL Web site include a passel of other hot irons ready to rustle like The Gap, Hewlett-Packard, Minute Maid, Westpoint-Stevens Home Fashions, and more.

### Another Side

For a much funnier side to *Martha Stewart Living*, check out <http://www.caderbooks.com>.

There you can find and order *Mad About Martha: The Fabulous Paper Doll Book* (1996, Cader Books, NY; ISBN: 0-8362-2432-9 \$9.95). It has "parody" on the cover, so it's absolutely unauthorized.

It's a full-color 32-page paperback that includes paper doll cut-outs, so you can have Martha dress up in a variety of styles and poses she'd never have you imagine. There's a Christmas cutout gingerbread house, a Santa Suit for Martha, and a deflated cutout of Julia Child, who now knows not to cross swords with Martha Stewart. There are hilarious dress-down versions of Martha you can try as well, including a '70s leisure suit Martha cutout.

By the way, you'll love the Martha Stewart daily calendar that's included. There are several months of a schedule broken into 5-minute intervals.

Cader Books also publishes other "unauthorized" satirical titles for other important cultural

## Online Guide

**Online Services** continued...

icons including the *Bad as I Wanna Dress Dennis Rodman Cutout Book*, *Naughty Shakespeare*, and a *Junior Astrologer Series*. Give the gift of Martha this holiday season. It's a good thing.

### Mortgages Online

Don't be bait when it comes to shopping for a home loan. Check out the HomeShark (<http://www.homes shark.com>) instead. This Web site provides information about, and access to, discounted mortgages, as well as home-buying advice online.

HomeShark compares and offers mortgages from leading national mortgage companies, including Bank of America and Chase Manhattan, to provide competitive rates for those who can qualify. Using secure technology, HomeShark claims it leverages its low costs and Web distribution to save customers between 50% and 70%, or 50 to 100 basis points, in transaction costs over traditional mortgage brokers and providers.

HomeShark bundles together the important tools you need for a supportive online decision-making experience. Once users decide to buy or refinance, HomeShark provides comprehensive online step-by-step assistance for gathering the information and completing a loan application. HomeShark's Internet-based service gives consumers access to professional tools and real-time feedback, plus underwriting analysis on applications for pre-qualification, pre-approval or full application in a matter of minutes, not days or weeks like most analog vendors.

I checked it out and went through the pre-qual worksheet and the results came up quickly. I still can't afford to live in San Francisco. It would have been a simple matter to click yes, and the system would display or send to me a certified prequal letter I could hand to my real estate agent who wanted to make sure I wasn't kicking tires or just wanting to eyeball the stemware in the homes of the rich and famous on a Saturday afternoon.

In addition to loan application help, the HomeShark helps you explore the market with sections on property valuation, comparing quotes, and shopping for rates. If you're renting and looking to buy there is a section for you, too, to help you figure how much you can afford/need to move in. The guides include sections on buying, selling, and refinancing.

## Online Services *continued...*

It slices. It dices. HomeShark even lets you find the value of your existing home compared to comparable values within your immediate area. When we tried this, it took about five minutes for the engine to find and churn through the data. But it displayed the data for our refinancing from a couple years back, and a couple recent nearby comparable sales that even noted the distance from my home. These "comps" were painfully realistic.

Harboring some denial concerning the valuation of our home and neighborhood, my wife was incensed. She was sure that our home was nicer than "that piece of trash" down the street, so I was grateful that HomeShark provides a way for one to fiddle with the comps.

It seems you could even check on your neighbor's or brother-in-law's claims about the price they actually paid for some property. Did Uncle Tom really buy at the bottom of the market, or did he get sheared like the rest of us? All you need is an address to check out some property

or neighborhood.

Some other services HomeShark provides can be found in the HomeWatch section. Once you've registered, your account can receive updated information, as HomeShark will track data for you. They'll automatically email you when you no longer need mortgage insurance, or if you should consider refinancing your home. HomeShark will also let you know when new HomeWatch features are added.

HomeShark's One-Time Data Entry lets you

store, keep or change your property and mortgage information whenever you want to. This makes it easy to run HomeWatch services on your data without having to re-enter the numbers. HomeShark also tracks information over time, including home pricing, and loan rates, watching for trends and monitoring the performance of your home investment.

Now why can't your agent do that for you? ■

Copyright © 1997 by Bill Gram-Reefer. All rights reserved.

*HomeShark's Internet-based service gives mortgage consumers access to professional tools and real-time feedback, plus underwriting analysis on applications for pre-qualification, pre-approval or full application in a matter of minutes—  
not days or weeks like most analog vendors.*

# Your Bar Code Automation Solution Specialist

Since 1986 Variant Microsystems has been the leader in bar-code decoders, scanners, and data collection solutions. We offer you expert consultation, installation, service and support on all systems. Our product line includes hand-held, fixed-mount scanners, bar-code printers, RF systems.

## STARTER KIT

- Starter kit consists of AnyLabel Software & MS-283 bar code scanner

Starting at  
**\$245**

- **AnyLabel**— User friendly, Windows-based bar code printing software.

- Prints on all laser & dot matrix printers

- **MS-283** — 3.2" High quality CCD for PC Scanner

- Great for touch applications

70-16171-01

## TURNKEY SOLUTIONS

We offer turnkey bar coding solutions: software customization, hardware set-up installation, training support.

## WEDGE DECODERS

External wedge decoders allow you to connect undecoded bar code readers (laser, CCD, etc.) to your PC or UNIX terminal. Very programmable.

## INVENTORY ASSET TRACKING

Variant Microsystems offers software to track assets inventory, documents, etc. Most work in conjunction with portable data terminals for a complete solution.

## LABEL PRINTING SERVICES

Have us print your custom labels for shipping, asset tracking (serial numbers, retail scanning, UPC, etc.)

## FREE TECHNICAL SUPPORT!

Wholesale Prices! Dealer, VAR, and Corporate Inquiries Welcome

### CCD SCANNERS

We carry major manufacturers including:

**Opticon**  
**Welch Allyn • Unitech**

### LASER SCANNERS

Our solutions include, hand held, fixed mount, raster by:

**Symbol • PSC**  
**Percon • Welch Allyn**  
**Metrologic • Microscan**

### BAR CODE PRINTING SOFTWARE

Powerful, feature-rich, and easy-to-use Windows software. Design & print bar code labels Windows 95 & NT compatible. Prints on all thermal, laser, and dot matrix printers.

### PORTABLE DATA COLLECTIONS

Collect data remotely and upload into your PC. Well suited for inventory-control warehouse application, etc. Use with a built-in laser scanner, or CCD or wand. Works with Windows software. We provide solutions from:

**Symbol • Percon • Unitech**

### PRINTER SUPPLIES

**Labels (Paper, Kimdura, Polyester, Kapton) & Ribbons for Various Applications.**

### PRINTER BAR CODE LABELS

Thermal, Transfer, Direct, Thermal Solutions from:  
**Zebra • Datamax**  
**Eltron • C. Itoh • Comtec**

Prices subject to change without notice. Not responsible for typographical errors.

**OVER 5000  
PRODUCTS IN STOCK**

including  
Software, Internet,  
Networking, CD-ROM,  
Printers, Monitors,  
Computer Books  
and Magazines

## VALUE SYSTEM

- ❖ PCI Motherboard
- ❖ 16MB 60ns RAM
- ❖ 1.6GB Hard Disk
- ❖ 1MB PCI Video
- ❖ 14" .28 NI Monitor
- ❖ 104 Enhanced Keyboard
- ❖ Mouse
- ❖ MS Windows 95 or MS DOS & Windows

## MULTIMEDIA SYSTEM

- ❖ Pentium® Motherboard
- ❖ 16MB 60ns EDO RAM
- ❖ 2.0GB Hard Disk ❖ 1.44MB Floppy Drive
- ❖ 2MB Video w/MPEG
- ❖ 15" .28 NI Monitor
- ❖ 104 Enhanced Keyboard ❖ Mouse
- ❖ MS Windows 95 ❖ 16X CD-ROM
- ❖ Sound Blaster 16 ❖ Amplified Speakers

## PERFORMANCE SYSTEM

- ❖ Pentium® Motherboard
- ❖ 32MB 60ns EDO RAM
- ❖ 4.0GB Hard Disk ❖ 1.44MB Floppy Drive
- ❖ 2MB VRAM Video ❖ 15" .28 NI Monitor
- ❖ 104 Enhanced Keyboard ❖ Mouse
- ❖ MS Windows 95 ❖ 16X CD-ROM
- ❖ Sound Blaster 16 ❖ Amplified Speakers
- ❖ 33.6K Fax/Modem

## PROFESSIONAL SYSTEM

- ❖ Intel Motherboard ❖ 64MB 60ns EDO RAM
- ❖ 4.0GB SCSI Hard Disk
- ❖ 1.44MB Floppy Drive ❖ 17" .28 NI Monitor
- ❖ 2MB VRAM Video Matrox
- ❖ 104 Enhanced Keyboard ❖ Mouse
- ❖ MS Windows NT 4.0 ❖ 12X SCSI CD-ROM
- ❖ Sound Blaster AWE 54
- ❖ Adaptec 2940 UW Ctrl ❖ 56K Fax/Modem

## Intellectual Property?

COMING IN NEXT MONTH'S

## MICROTIMES

## 19" RACKMOUNT ENCLOSURE

### Specifications:

- Faceplate Dimensions: 19"W x 7"H
- Chassis Dimensions: 17"W x 7"H x 17"D
- Weight: 15 lbs. w/o Power Supply
- Peripherals: Up to 4 Storage Devices
- Steel & Aluminum Construction
- Power Supply
- Cooling Fans: Two 60 CFM Intake Fans
- Expansion: PCI/ISA Passive Backplane (6-14 slots), Segmented up to 2 systems

## 19" RACKMOUNT ENCLOSURE

### Specifications:

- Steel & Aluminum Construction
- Faceplate Dimensions: 19"W x 7"H
- Chassis Dimensions: 17"W x 17"H x 24"D
- Weight: 17 lbs. w/o Power Supply
- Expansion: PCI/ISA Passive Backplane (6-14 slots)
- Power Supplies: 230,250, 300 to 400W Hot Swapable Power Supply (250-400W optional)
- Cooling Fans: Two 60 CFM Intake Fans
- RAID Level 5 11.2GB HD
- Door: Dustproof & Lockable
- Up to Nine Storage Devices

MADE IN U.S.A.

## 19" RACKMOUNT w/MONITOR

- 19" Rackmounting
- Integral Monitor
- 10" .28 dot pitch SVGA Color
- 9" Mono-TTL or VGA
- 8 or 14 Slot Passive Backplane
- 8 Slot Motherboard Mounting
- U.S.A. Manufactured

## HARD DISK CD-ROM ENCLOSURE

- 8, 14 & 20 Slot Options
- Dual Power Supplies
- Hot Swappable Redundant Power Supplies (Optional)
- 8 Drive Bays
- 8 Fans
- Motherboard or Passive Backplane
- 200-600 Watt Power Supply
- U.S.A. Manufactured

## 19" RACKMOUNT KEYBOARDS

### RMK-102

- Space for Mouse or Trackball
- Switch Selectable for PC XT/AT or PS/2
- 20,000,000 Life Cycles per switch
- Separate Numeric and Cursor Keys
- Twelve Function Keys
- Supplied 22" Sliding Rail for 19" Rack
- 19" (W) x 1.75 (H) x 16.5" (D)

### RMK-102TB w/ Trackball

- Compatibility: Microsoft &/or PS/2 PDP
- Interface: RS-232C or PS/2 PDP
- Connector: DB-9 Serial or 6-pin Mini DIN
- Encoder: Opto-mechanical
- Tracking Speed: 500mm/sec. (20"/sec.)
- Switch Lifetime: 1 Million Cycle
- 19" (W) x 1.75 (H) x 16.5" (D)

## RACK MOUNT CABINETS

From 21"-78" Available

## PASSIVE BACKPLANE BOARD w/ CPU Card

- ISA BACKPLANE BOARD 3 to 20 Slots
- PCI BACKPLANE BOARD 8, 14, 20 Slots
- Segmented Backplane Available

## 9" SVGA MONITOR MONO PAPER WHITE

- CRT: 9" x 90 DEFLECTION NON-GLARE PAPER WHITE
- RES: 1024x768, 720x400, 640x480
- POWER SUPPLY: 100-240V

# Help Us Choose The Next MicroTimes 100

**O**ur January 1, 1998 issue will feature our 11th Annual MicroTimes 100 list of industry luminaries and others who have made significant contributions to the computer world during 1997. And while many of them are world-renowned and have world-class PR departments, we're especially interested in hearing about the contributions of those who don't.

That's where you come in.

Please use this form to nominate anyone you think should be included in this year's list. Give us as much information as you can about your nominee, especially his/her accomplishments and contact information so we can follow up.

To encourage you in this, we will be giving **ten free one-year subscriptions to *MicroTimes*** to randomly selected people who submit nominations. If you want to be included in this drawing, please be sure to include your name, address, and contact info as well.

**Nominations close on Friday, November 21, so don't delay!**

**You can fill out a nomination form online at:**

<http://www.microtimes.com/webfm/microtimes/mt100.html>,  
or fill out this form and mail it to:

**MicroTimes 100**

**1300 Clay Street, 8th Floor**

# MultiMedia & BEYOND

## Gulch GOSSIP

by Jonathan E.

### Be Where When?

With all the hype about the promises of telecommuting and the new decentralized networked corporation spewed forth by high-tech companies and assorted visionaries, I am occasionally mystified by the ever-climbing cost of housing both down in the Valley and around the Bay, as well as the increasingly tiresome traffic jams just about everywhere, not to mention the big deal made about such a trivial thing as a **BART strike**.

But then I recollect that often the telecommute solution is one that high-tech companies sell to others rather than practice themselves. How else to explain the booming Valley phenomenon if it were really true that one could work from anywhere? How else to explain the many high-tech companies that require their employees to be present on the premises? How else to explain the sprawling acres and acres of ugly office parks and campuses covering the old orchards of Santa Clara?

Could it be that once again the vision, the pitch, outstrips the delivery? I'll believe otherwise when housing prices start to fall and one, just one, orchard gets replanted.

Perhaps I'm just impatient; perhaps I'm just naive in hoping that I'm being told the truth by all the future-is-now hucksters; perhaps in ten years time **Caltrans** will be tearing freeways down instead of building them because we'll all be happily sitting at home telecommuting over the Information Superhighway.

However, once upon a time there was this concept of "the paperless office" promised by the same gang that now wants to sell you telecommuting. That has so far turned out to be hype.

Almost without doubt you can hear another bucketload of hype from people with nice offices at the **Telecommuting & Home Office Exposition & Conference**, where we're promised "Corporate Solutions Through Remote Access." It'll be at the Moscone Convention Center; the conference runs from October 15-17, while the exhibits are open on October 16 and 17. More info (of a generally more positive nature, I'm sure) from 1-800-393-THOE or Webwalk your way to <http://thoe.com>.

### Driven To Telling Stories

I WAS SHOCKED, ABSOLUTELY SHOCKED, BY **JON Carroll**'s assertion in the September issue of **Wired** that "I had written the first big story about **Myst** and the **Miller brothers**." That story of his ran in the August 1994 issue of **Wired**, while my

Multimedia 101 column on **Myst** appeared in this very magazine eight months earlier in December 1993.

What is Carroll saying? Mine wasn't big enough? Didn't I say enough about the brothers Miller? I'll admit that it is true that I concentrated on the product rather than the personalities. OTOH, doesn't it count for anything that the very first story I wrote for **MicroTimes** in September of 1989 was about **Manhole**, the Millers' first (if I recall right—it was a looonng time ago) CD-ROM? Unfortunately, they didn't get mentioned at all in that piece, we were all hung up on the technology and the product back then; there was none of this warm and fuzzy personality stuff, none of Carroll's navel-gazing.

Aren't we writers a pissy lot? And you might be excused for thinking that I've been writing about this stuff for far too long!

# AOL Vs. Snap!

I CAN'T SAY THAT I'M PLEASED TO REPORT THAT I'VE NOW RECEIVED two AOL discs within a week addressed to "Current Resident"—and I don't even live in a generally demographically desirable ZIP code.

OK, I guess we should give AOL a little kudos for attempting to bring the wonders of the online world to the masses, but I find it hard to believe that anyone with a computer and modem isn't already inundated with AOL discs wherever they live. This is without doubt junk mail of the worst kind.

However, I am impressed with the offer of "50 FREE HOURS to do anything you want." Well, I'd like some free time to take a walk, go to the movies, listen to some music, visit some friends (hell, make some friends in real life!)—50 hours to do almost anything other than get online with AOL. Do you think AOL can or will give me those hours?

I suppose AOL may be getting desperate because CNET is in the midst of launching its AOL killer, **Snap! Online**. It's too early for me to say anything much, because the disc that arrived addressed to me personally for pre-viewing is a Windows disc. However I like the accompanying T-shirt's snappy (groan!) little slogan, "Welcome Snap! Online—Goodbye AOL." (My, we're easily amused today.)

Perusing the press kit reveals that Snap! is basically a front end for the Web, for all those folks who want to get it organized into channels and content providers and other handy-dandy professional media concepts. Well, it'll be free 'cos it's advertiser-supported (just like television—we've come a long way, baby) so you might as well look for yourself at <http://www.snap.com>. It appears that the disc is just another way to get you online if you're challenged by the intensely complicated procedures that today prevent so many from enjoying their birthright of online access.

Ooooh! it features **Richard Hart** and **Sofie Formica**! I can barely wait for the Mac disc that I've been promised will be in the mail any day now! I'm sure most readers of this column will find the whole thing immensely redundant, although it's probably significant that Snap! is the only online service besides MSN with a preset active channel within Microsoft's Internet Explorer 4.0.

Sofie Formica

## I Need Apertus Like A Hole In My Soul

OBVIOUSLY I'M IN A SLIGHTLY SOUR MOOD AS I WRITE THIS COLUMN, and I think it's more than just the usual back pain from being attached to the computer for too long. Perhaps it's caused by being subjected to so much advertising while researching this month's Multimedia 101 column, perhaps it's exacerbated by what I found on the **Apertus** Web site.

Whilst heaving out vast quantities of ancient press releases from my office I came upon a package from Apertus, of not too great a vintage. It was kind of snazzy with a big '30s-style poster, which included this textual snippet of insight—or at least intrigue, "For the ideas that once broke rules, now create them. Therefore plant the seeds of freedom, and be seduced by the voice of change."

That sounded kind of cool at the time, although I now hardly know what it really means, and so I dutifully set off to the Web site to see just what Apertus has on offer. I'm still not sure what that is, although it seems to be some kind of networking company.

I got turned off the whole quest for knowledge remarkably fast by a stomach-churning quote by **Jim Channon** (whoever he is) from something (presumably a publication) called **Creating Esprit de Corps** that Apertus saw fit to put on its **Brave New Voices** page (<http://www.apertus.com/corporate/brave/voices>) along with a lot of other corporate newspeak gobbledygook: "The challenge for business leaders in the 21st century is to assume the mantle of spiritual elder for their cultures, so that life doesn't become trivial and gray for all the people who spend most of their [here there was a missing word, a typo!, that I would assume is "time"] at work. Corporations are our new communities."

Looking at the bright side for just a moment, this statement at least encapsulates almost everything I find repugnant about the business-obsessed, so-called culture that's currently dominant in these quarters. I'll even grant that Channon may, may, be a well-intentioned nice guy—but I suspect he gives high-priced seminars to corporate execs who just need a little extra brainwashing to really screw their employees over. So talk about leaving the fox in charge of the hen house or having the junkie hold your stash!

There's some survey that found that an astoundingly high percentage of business people think it's okay to lie in business; that's not a good sign for spiritual eldership. Beyond that, a corporation, at

GULCH GOSSIP "I Need Apertus..." continued from previous page

least under the current legal system, is basically a device to maximize profit without worrying overly about the moral scruples that afflict so many individuals; it's a different universe from spiritual concerns, which, if genuine, have no financial aspects.

Our problems as a society very much stem from people already spending too much time at work being trivial and gray; the solution is not for corporations to be our new communities, but for people to get out of the office and work less. Let's talk—not doubletalk—about really planting "the seeds of freedom!"

## The Return Of Whole Earth

I'D LIKE TO GET AT LEAST ONE VAGUELY POSITIVE ITEM INTO THIS COLUMN—and the return of **Whole Earth** (and that's it, no more "Review") to newsstands and subscribers' mail boxes is a good thing indeed.

It's not very cyber now, but over the years **Whole Earth** has had an intertwined and checkered history with the computer revolution, ranging from early notice of various mini-computers and computer art in some of the very first Catalogs back in the '60s, to **Stewart Brand's** early reporting on personal computers and encouragement of the **Hackers Conferences**, to the **Whole Earth Software Catalog**, to an issue focusing on "**Computers As Poison**," to the founding of **The WELL**, to the **Electronic Whole Earth Catalog**, one of the first consumer CD-ROMs, to the **Cyberthon**, a notorious virtual reality extravaganza, to the editorships of **Kevin Kelly** and **Howard Rheingold**.

If you care, my history with it has been pretty checkered too; some of the best times of my life were spent working (and not) there, and the very worst day of my life was also spent there. I owe more to it than can be easily stated.

After a year or so's dormancy brought about by financial constraints but partially ended by 2,235 **Whole Earth** lovers donating over \$139,000 (that's community!), the **Summer 1997** issue finally sees the light of day under the editorship of **Peter Warshall**, who I guess I would have to describe as a biologist who's worked with **Whole Earth** off and on since the dim mists of antiquity. There's a clean new design, the old domains have been adjusted and renamed for these times, but the content is as sharp and pointed as ever.

The interesting thing about **Whole Earth** is that it has always been recognized as being ahead of the curve; looking back, one can see numerous examples of its original obscure coverage becoming mainstream fodder several years later. This new issue has completely veered from the somewhat crazed cyber-edge obsessions of a few years ago towards a very sober and reality-based examination of environmental and community issues—almost back to its roots, although now you'll find notice of a few Web sites and mailing lists with good information. Hopefully **Whole Earth's** reputation for foretelling the mood and concerns of the future is still deserved, because this issue is a delightfully refreshing oasis of good sense amidst the din and thunder of today's computer business. If this is the future, it's worth hanging on for.

It's available for \$6.95 at newsstands, an annual subscription for a mere \$20 from **Whole Earth**, P. O. Box 3000, Denville, NJ 07834-9879; 1-800-783-4903. The new editorial offices are at 1408 Mission Avenue, San Rafael, CA 94901; email to [wer@well.com](mailto:wer@well.com). The biggest change will be that **Whole Earth** will start taking advertising in the next issue. To buy yours, call (415)256-2800. Otherwise, donations would, I am sure, still be welcome. ■

# Advertainment Now!

## The Evolution of Launch

**L**aunch is now in its third year of publishing and, as far as I can tell, the only surviving CD-ROM magazine to have managed such a feat.

As reported in the last Multimedia 101 column, there's a young new upstart, *Sweet!*, entering the arena but, of the original contenders that began publishing back in the glory days of 1994 and 1995 when so much seemed possible, *Launch* stands alone. Some, like *Blender*, have metamorphosed into Web-only presences, while others have crashed and burned in their entirety.

Of course, it's not easy to publish any magazine, and the casualties are high in whatever medium the publisher chooses to do business. However, any survival in the carnage of the CD-ROM media massacre is now noteworthy, particularly the survival of a periodical.

One might expect that the tumultuous struggle of the past few years would have left *Launch* bloodied, staggering, barely able to raise its head, meekly begging for mercy. On the contrary, *Launch* has attracted substantial invest-

ment from, among others, such digi-tech media outfits as Softbank, entertainment entrepreneurs such as Chris Blackwell, and venture capitalists like Phoenix Partners.

With \$10.5 million of total capital raised, *Launch* is pursuing a variety of new directions—both to consolidate its position as the leading disc-based entertainment periodical and to be ready to appear on new platforms

when they become reality. *Launch* has teamed up with Intel to produce a new MMX/DVD-ROM version when that platform finally reaches the market. Plans call for it to be bundled with all the new systems shipping from Sony and Gateway 2000 early next year.

Any day now, *Launch* will unveil its newly revamped and expanded Web site, with the goal of becoming the one-stop destination on the Web for all music-related content. In the second quarter of 1998, the frequency of the disc will increase from bimonthly to monthly. With an eye on the further-off future, *Launch* is also exploring the possibilities of

new broadband networks with cable, phone, and satellite companies.

*Launch* can pursue these varied directions because it has achieved some level of success at its basic business. Beyond simply surviving, *Launch* has managed to convert much of its circulation from newsstand sales and bundling deals to paid subscriptions, a much more secure form of income for periodicals.

# MultiMedia & BEYOND

**One might expect that the tumultuous struggle of the past few years would have left *Launch* bloodied, staggering, barely able to raise its head, meekly begging for mercy. On the contrary, *Launch* has attracted substantial investment.**

Although total circulation a year ago was generally not much lower than this year, the number of subscribers has doubled to 120,000 and the number of copies bundled, a rather indiscriminate and not very lucrative way of reaching customers, has decreased. Overall circulation is better than 150,000 and issue #14, published in August and featuring Sarah McLachlan, had an additional 175,000 copies distributed to college students by AT&T as part of their college marketing campaign.

*Launch* is also distributed through the normal retail outlets where one might expect to find a disc-based entertainment periodical—Blockbuster Music, Barnes & Noble, Borders, Computer City, Best Buy, Waldenbooks, Tower Records, and Virgin Megastores. However, *Launch* can also be found at other, more general and less specialized media outlets like supermarkets and drug stores through its distribution agreement with Kable Distribution Systems.

The other pillar of financial strength for most periodicals is advertising. Here, *Launch* is also doing quite well, having pulled in over \$1.2 mil-

lion in ad revenue for 1996. Issue #14, according to Fiona Posell, vice president of *Launch*'s corporate communications, was its biggest issue yet in terms of ad revenues, although she declined to provide an exact figure.

## HEY! WANNA BUY AN SUV?

There's no way to avoid *Launch*'s advertising—either

while checking out the disc or examining its success. Indeed, a substantial amount of the media coverage of *Launch*, included in its press kit, focuses on its approach to advertising. As was pointed out several times by *Launch* execs, what has allowed it to succeed is a viable business model—and ad revenues of \$1.2 million are obviously an important part of that model.

*Launch*'s interface is a spatial cityscape-and-buildings metaphor—no pulldown menus at all, and there's no text-based selection of choices until you're deep within the content, at the levels of the record reviews or the interviews with that month's starlet.

What this obviously allows is for *Launch* to present its ads in a thematically consistent way. Many appear as billboards within the cityscape—click and you're checking the goods. Other ads are placed at lower levels, inside buildings—for example, in the lobby of the Launch Cinema you might find an ad for Butter Balls candy, or within "The Hang's" romper room you'll find an ad for band merchandise.

In addition, the QuickTime ads, along with

selected editorial content, play at random as teasers on a screen, a giant virtual Jumbotron that's present in each of the topmost west and east city views.

From one issue to the next, *Launch* can easily do a bit of urban redevelopment and rearrange the elements of the cityscape somewhat to allow for new advertisers or editorial features. Advertisers can upgrade their presentation; ABC recently moved into a much nicer virtual building. Sometimes an ad will appear in several places—for example, Reebok placed a top-level cityscape-accessible ad that was also accessible from within the feature space allotted to Shaquille O'Neal, basketball and rap star.

At first, I absolutely hated both the cityscape metaphor and the jumbling together of paid advertising and editorial content. With time my reaction has mellowed a bit. Once you're familiar with the *Launch* city plan, it's both pretty obvious where stuff is—most of the layout is the same from month to month—and, generally, it's quite obvious what is advertising and what is editorial. The much-vaunted division of

church and state, editorial and advertising, is one of those publishing myths that receives more lip service than actual dedication at many entertainment-oriented publications and *Launch* is no worse than many print outlets. Ultimately, *Launch*'s layout is not much different from the interspersing of ad and editorial pages in sequentially ordered print pages. The occasional ads that seem as though they might be editorial, usually for music or computer games, are segregated into different areas and are tagged as ads.

## ARE WE HAVING FUN YET?

Besides that, many of the ads are more fun, more interactively innovative, than most of the editorial.

By and large, the editorial doesn't do much more than point-and-click (poick?) to get you into another screen or trigger some sound or video. The ads often go beyond that, although reportedly they're usually based on the occasional more ambitious editorial feature that is used to sell the idea.

Most notable has been the Toyota RAV4 ad, which allows the user to assemble an email postcard from various elements (including sound) of their ideal scene with the SUV and then send it to a friend via the Toyota Web site. Another ad, for Lee Jeans, involves a rather silly but amusing (very Monty Python, actually) opportunity to pull down people's pants. Probably very politically incorrect but certainly a chance to waste, I mean spend, time with the advertiser's brand in your face. Other ads, like the Butter Balls ad, might be fairly elaborate interactive animations explaining the scientific principles behind the candy, along with its incredibly important role in human history. The common denominator is that these ads are really working at holding your attention with something to do, or they give you several choices within a few minutes to keep you involved.

Now, of course, when anyone advertises, they want to know that what they're doing is reasonably effective, or at least that people are paying some sort of attention. Here is where *Launch* has something of a secret weapon. Users are encouraged to fill out a survey form, the usual stuff about income and age and so on, and then attach their tracking file and email it back to *Launch*. The tracking file contains information about how much of the disc the user has looked at and how much time he or she has spent in each place. Thus, *Launch* will know that you spent fifteen minutes making your RAV4 postcard but only five minutes pulling down people's pants for Lee—or maybe vice-versa. It's the sort of stuff that publishers and advertisers, statisticians of all kinds really, salivate over.

For now, the user has to make the explicit decision to attach the tracking file to the email, and the only coercion/enticement is the chance to win something like a new computer from Gateway, one of *Launch*'s most stalwart advertisers. What might be possible in the future, with more sophisticated networking and without the customer's consent, is

obviously an issue of privacy for many and a commercial issue of simple data gathering and measuring ad effectiveness for others.

To produce these ads, *Launch* works closely with the agencies and clients. Posell explains that the concept usually comes from the agency or client, while the production of the interactive digital elements is most often done by *Launch*'s own in-house team of fifteen production staff members. The technical issues of getting the ad to work without bugs and fit into the overall content are much more easily addressed by handling the work in-house. *Launch* now uses Director as its authoring program, having replaced Apple Media Tool.

One can imagine that, from *Launch*'s point of view, it's much safer to not come up with the concept, because, with those tracking files available, the client might decide that payment should be made on the basis of time spent with the ad. For now, ad rates are based both on how many megabytes the ad takes up and on its placement within the disc.

## EDITORIAL! CAN WE GET SOME EDITORIAL IN HERE?

Amusing as the ads can be, *Launch* doesn't sell itself to its users with them (although a few users are reportedly pretty eager to check out the new versions of some ads), but rather with its editorial multimedia coverage of music, movies, computer games, and some sports.

Music is perhaps the most important of these; the cardboard cover usually features a band with a banner across the top. Two issues ago it modestly urged you to "Hear" whoever's

albums were reviewed, but now, more hubristically, it claims to allow you to "Interact" with whoever the interview subjects are.

*Launch* follows a fairly standard outline from issue to issue. There's a look at (usually) three movies, with a combination of interviews with stars and a tour behind the scenes. Two or three musical acts are interviewed in "The Hang," where "The Vibreaker" also gives you twenty or more musical reviews of current releases, along with three thirty-second sound clips.

One re-released or classic album gets special review treatment in "The Vault." There are playable demos of a couple of computer games, one for Mac and one for PC, along with reviews.

Sometimes there's an additional sports feature. Usually, there's a special acoustic performance in the *Launch* studio by one of the featured artists, and sometimes a clip of a live club performance. These often also make it on to the disc as a Red-Book audio track and are exclusive to *Launch*.

*Launch* doesn't claim to be particularly hip or cutting edge in its content. "We want to be a general interest magazine," said executive editor Dave DiMartino in one interview. And that's certainly true—as far as I could tell all the coverage is of material that has been filtered through the entertainment industry's corporate mainstream. I can't recall any coverage of bands on independent labels, and most of the bands featured play what passes for rock these days with only minimal coverage of other genres.

One problem with this is that there's already loads of other ways to check this stuff out, from

*continued on page 198*

# EVERGREEN

# MultiMedia & BEYOND

## MULTIMEDIA 101 continued from page 194

radio stations to record store listening posts, not to mention all those magazines that just appear in print. Another problem is that this seems to be exactly the area of the music industry that's having trouble these days, primarily because it's so played out and there's little really exciting new talent coming up. I personally would find *Launch* more valuable and interesting if it broadened its outlook and covered material that is ignored by other media outlets, instead of just being a multimedia version of the same old same old.

Generally, the interviews consist of eight or so questions that you, the user, can interactively ask the subject by clicking, which causes the subject to spring to life in a QuickTime clip. Regular readers of this column will not need to be told how poorly I think of this general technique and how much I abhor this misuse of the word "interactive."

In this case, there's an added problem in that the questions tend to be toothless and there's little sense of this being anything other than a public relations exercise; there's no sense of a critic framing the subject or putting it in any sort of context. On the other hand, the video clips often reveal more about the personalities of the subjects than any amount of polished prose. I was surprised at how ill-at-ease and dorky many of them appeared to be.

If you want prose, clicking on the Web Connection button will get you to *launchonline.com*, where there's a transcript of the complete interview. Each feature also has a screen of text introducing the subject. Suffice it to say that these are often completely throw-aways, puffing up *Launch* and sometimes, as in the case of Sarah McLachlan's Lilith Fair, dismissing the subject as being less important than *Launch's* treatment of the subject.

The record reviews pay more attention to the power of printed words, and in many ways are the intellectual center of *Launch*. For a start, not all fawn over the product. Three 30-second clips go some way towards revealing whether your taste is in alignment with the writer's. Certainly, that's enough for you to know if you'll simply hate the album, but it's not enough to know whether you'll absolutely love it. I found it frustrating to read about tracks that weren't sampled, and I'd like to know the criteria for the samples that are used. Having done some of this kind of work myself, I know that the temptation is to put on the bits you like the most—or, if you

hate the album, the very worst bits—thus coloring perceptions even further, rather than providing any objective sense of the album.

## PRODUCTION AND TECHNICAL NOTES

As also noted of the titles featured in the last Multimedia 101 column, the general standards of *Launch* are quite amazingly good compared to those of a few years ago. This becomes especially obvious once you look at the titles on a fast drive with a fast processor. It really becomes a pleasurable experience rather than a merely almost-bearable one.

*Launch* claims to run on a Mac 68040 25MHz or a 486DX 33MHz with a 2X drive. I'm skeptical. Besides the 12X drive with 200MHz processor that I looked at it on, I also tried it on a 60MHz with 2X drive. That 60MHz experience barely got over the threshold of being worthwhile.

On the faster machine, the thing that most impressed me, relatively trivial as it is, was the way that the video on the cityscape's Jumbotrons kept running in sync as I flipped from the west to the east aspects. However, the faster machine also scrolled the type in the reviews too fast. It was the usual problem of the screen only showing about six lines at a time while the other multimedia bells and whistles, the sound and pictures of the sleeve and the artists, were taking up screen real estate and processor cycles. The slower machine could barely scroll at all while everything else was going on. Obviously one thing designers are going to have to do in the future is make text fields deeper.

The multimedia bells and whistles also seem to reduce the attention paid to text. *Launch* and *launchonline.com* suffer from some typos (including the misspelling of an artist's name), while the date given for returning the reader's survey and being eligible to win the Gateway were before that issue's publication date. I found it astounding that *Launch* ran a story on Sarah McLachlan and her Lilith Fair tour but did not have an itinerary anywhere that I could find, either online or on disc. Perhaps the tour was over by the time I looked and the information would have been irrelevant but, combined with the editorial dis-

missiveness towards it on the disc, it produced a slightly sour taste.

There was a reference to Miles Davis' pre-*Bitches Brew* band in a Vault record review of the Isle Of Wight Festival in 1970, but *Bitches Brew* was actually recorded a year earlier. Beyond the realm of pure words and into the world of desirable links, one issue had a story on Erykah Badu as well as a review of her album, but there was no link between the two, leading one to think that perhaps there isn't that much attention paid to the finer details of what's possible beyond the standard template.

## EPG—THE BEST THING ABOUT LAUNCH!

However, all these quibbles about *Launch* faded into relative insignificance when I checked out the Manic Media interactive serial in the Binky's section. This screamingly funny animation takes a wicked look at the vicissitudes of the multimedia business from the point of view of the typical smallish multimedia shop (if there is such a thing).

Produced by EPG Media of Seattle, Manic Media skewers the still beating heart of multimedia and lays it open for inspection in a way that is both brutal and—well, no, not tender; how about bitterly funny?

Poicking around the *www.epgmedia.com* Web site quickly produces the realization that

EPG has some English connections, explaining the Monty Python air to their work. It also explains the air of truth that permeates Manic Media because EPG are that archetypal "smallish multimedia shop."

In this particular case, EPG can claim credit for the

*Material World* CD-ROM, but otherwise they're stuck with mostly corporate work, although the site also seems to be hyping a new show EPG have produced for the Microsoft Network. Check it out for yourself, along with their hilarious Web-based explanation of "Who Killed C. D. Romney?" It's advertisement at its finest!

The Manic Media serial began with *Launch's* issue #11; it would be almost worth getting those back issues for that feature alone. ■

# Virtual Intrigue On The Last Express

## The Making Of Brøderbund's Interactive Historical Drama

**A**re your eyes Misting over waiting for *Riven*? Looking for a graphic adventure game that is more adult than *DOOM* and more sophisticated than *Duke Nukem*? One that challenges your brain and intuition instead of pulling your chain?

All aboard for *The Last Express*, Brøderbund Software's (Windows 95, DOS and Power Macintosh; 3 CD-ROM; \$49) elegant excursion into international intrigue.

### THE BRINK OF THE GREAT WAR

Produced by Smoking Car Productions of San Francisco, *The Last Express*' action starts in July 24, 1914 when the European states and empires were beginning to unravel from the surges of new politics and the crackling of old rivalries. Driven by the clock of real time over three days and nights, the game takes place on The Orient Express, a luxury sleeping train. The Express

represented a new internationalism; its speedy route from Paris to Constantinople was unimpeded by national border crossings. Its passengers were the "jet setters" of their time.

Jordan Mechner, game designer/director, poses the question: "How did they go from prosperous peace to a terrible war that devastated a world?"

He continues: "The inspiration for this com-

puter game was the last few days of peace before World War I broke out on that very train. The characters represent a cross-section of European society from different countries at different social levels and political philosophies. Just as a train carries you towards a destination, this train is carrying you through time and space towards a historical cataclysm."

You, the player, are Robert Cath, a young American doctor, who has jumped aboard in response to an urgent but enigmatic request from a soldier-of-fortune friend who was fatally deep in the thick of it all. It is up to you to stay in one piece and trace his role in the complex and rapidly-unfolding intrigues, plots and counter-plots playing out on the train among the various spies, counterspies, arms merchants, ingenues, soldiers and revolutionaries. A sleeping car passenger train is also a micro-community. The train moves from one place to another through constant change.

## VIRTUAL INTRIGUE ON THE LAST EXPRESS *continued...*

### COMIC BOOK REALISM

"We wanted to approximate the look of a European comic book kind of graphic realism," producer Mark Netter says. Everything, from the fully rendered backgrounds of beautiful period detail to the realistic and smoothly moving characters, is of a museum-quality level of consistent finish.

*The Last Express* is like a movie—a foreign film with different languages and subtitles—in that it has a linear, narrative structure with definable characters who can interact in dramatic conflict to develop a resolvable story.

It is unlike a movie in that you are free to move around at will within the virtual environment and choose to interact, or be acted upon, with the other characters. A movie describes a fixed and completed continuity, while in *The Last Express*, no two games are exactly alike.

Cartoons bypass our suspension of disbelief.

When a character in *The Last Express* walks towards you in the corridor, and then passes you saying, "Pardonnez-moi!" you can feel his presence as he really looks at you. This conveys a sense of narrative intimacy that is rarely found in a computer game.

"You have real performance here," Netter says, "but the characters are sprite animation

sequences. You have realistic full freedom of motion, where you can always turn around to look at different angles. You can follow other characters and see their backs as they pass you. Repetitive action cycles in animation with dissolves, like someone reading or dining, are more naturalistic and acceptable than looping live action sequences."

### ROTOSCOPING

The secret of the *Express*' realistic-looking and -moving characters comes not from animation, but rotoscoping: tracing graphic images from live film or video footage, frame by frame. Characters are shot against a blue screen that keys out as blank space where graphic backgrounds and objects can be merged with the characters in the computer.

"Disney-style hand-drawn animation was not feasible," Mechner says. "The typical budget for one of their features is about \$50 million,

## VIRTUAL INTRIGUE ON THE LAST EXPRESS *continued...*

bulk of that going towards the animators who draw the individual frames. The budget for our entire project was \$5 million, and the bulk of that went towards the programming and art work.

"That figure already makes it expensive for a computer game. The live-action blue screen production for the game came in at about \$500,000,

which is the low-end for what it might cost to shoot a low-budget independent feature film.

"In our story, it is a huge, almost old-fashioned David Lean (*The Bridge on the River Kwai*, 1962; *Lawrence of Arabia*, 1965) style of story with a period piece—crossing Europe, train chases, people sword-fighting on top of the

train, crowd scenes, train explosions and even mysticism. If *The Last Express* were a dramatic feature film it would be a \$50 million epic, so we had to do it on the cheap as an animated interactive computer game.

"Live action computer games have never been successful. There's been a spate of CD-ROMs that boast of having Hollywood-style live action, and at their best you just feel that you are watching a video on your computer in low resolution.

"I think *The Last Express* is one of the first graphic adventure games where speed is not an advantage. It doesn't (except in the bug-catching and fight sequences) reward quick reflexes. It's not based on the solving of mechanical puzzles like *Myst*, but

upon your attention to details and clues and the interaction of characters and their actions. In this game, the female characters have as much importance and ambience as the male characters, if not more so."

Designer Jordan Mechner:  
"Just as a train carries you towards a destination, this train is carrying you through time and space towards a historical cataclysm."

## BLUE SCREEN DREAMS

"What fascinated me about the project, and got me to move up from Los Angeles," Netter says, "was that I felt that Jordan had developed a new grammar for the adventure game that didn't really exist before. It gave us the opportunity to use real actors and carefully cast them for face and for voice. There were over thirty-five speaking roles.

"We had a nineteen-day film shoot in 16mm in blue screen, and then I stayed on and produced it for the next two years. The idea was to avoid lip-sync entirely so that we could use different voices with different faces. There were only four actors that had the face matched by the same voice.

"Shooting live action for rotoscoping provides all the details of bodies and clothing so that all the action is very convincing. We had to get high contrast in the different parts of the costumes, and we had to have some costumes specially created so that the computer would be able to recognize contrast between parts and areas and create lines to be prepared for the artist to touch up in the computer.

## We Mean Quality & Service Since 1986

**Lifetime Labor Warranty on All Computers**  
**Special Same Day Service • Free Delivery**  
**Special Networking & Corporate Services**

## VIRTUAL INTRIGUE ON THE LAST EXPRESS *continued...*

"In some cases, we were able to rent the right period costumes; others were constructed with non-reflective materials and with different contrast colors. All the costumes had special piping in order to create lines and contrast. We also had to do special techniques with makeup and hair in order to maintain the sense of graphic definition. The model train photography was a day shoot where we used the same techniques of heightened contrast and line. We brought in a model train expert and found a set which duplicated the look of the Orient Express."

The backgrounds are all pre-rendered. There are six tracks of constantly streaming and dynamically adjusting sound, depending on where your character is positioned in the train, to hear other characters' voices and different sound effects. The sound of the background ambience changes as you move through the train, and subtitles appear on the screen to match the voices heard when they are not in English.

### BUILDING A RAILROAD

*The Last Express* was originally programmed on 486 machines. "We did the Microsoft trick of not giving people too fast a machine so they wouldn't outstrip the mark in the programming," Netter explains. The 3-D work and backgrounds were modeled in formZ with RenderMan on Macs with SGI cards in them. They used Adobe Photoshop and AfterEffects, and Premiere for a lot of the special effects in post-production—such as adding fire and hand-animated explosions.

Grabface, Smoking Car's proprietary rotoscoping application, is the tool that they used to turn the 40,000 or so frames of live action into cartoons one frame at a time. It takes an image that was filmed on 16mm and transferred to

Exabyte tape and then streamed off onto the network. Grabface finds the areas of contrast, extracts the lines and defines the areas. The artist can then click and colorize the areas from a model sheet, and with this method can process hundreds of frames in a day.

"We are kicking around ideas for the next production," says Mechner, "and I can promise that it will be just as innovative as *The Last Express* but will be different—more in the action-adventure genre."

### BOOKING THE EXPRESS

From Prima Publishing, *The Last Express: The Official Strategy Guide* (198 pp, \$19.95), by Rick Barba, is the best way to deepen and expand your virtual experience while riding the digital rails of this quality graphic adventure. It provides a much more detailed historical background than the adequate manual is able to do, and offers a full illustrated walkthrough of every level, complete lists of necessary actions and wrong moves, and instructions for finding, opening and working many objects that you may encounter.

In keeping with an atmosphere where not all things are what they seem, here and there are some tips that waft astray, such as the hint to hide Kronos' briefcase full of gold in compartment A, when really it will only stay put in your own compartment No. 1.

*The Best Action & Arcade Games: Strategies & Secrets*, by the staff of the magazine *Computer Games Strategy Plus* (Sybex, 241 pp + Windows CD-ROM, \$19.99) is a great guide for some of the most popular and interesting Windows and DOS games out there, such as *Quake*, *Hexen*, *Mech Warrior 2*, *Dark Forces*, *DOOM*, *Earthsiege 2*, *Terra Nova*, *Fury*, and *Magic Carpet*. With clear and complete sequential analyses of each game, its power tips include those most important to that particular game, such as providing the full location tables for *Crusader: No Remorse*. Many of the games are included on the CD-ROM as playable demos. This package can help you probe and scope before you buy, and give you that extra edge once you have booted up.

So, you've shopped wisely, got your tips in hand, and still (yow!) nothing's happening?

*Computer Gaming World: Why Won't This \*@X#! Game Work?* by Denny

Atkin and Terry Coleman (BradyGAMES Strategy Guides, 163 pp, \$19.99) is "The Indispensable Guide to Trouble-Free Gaming." Although "trouble" is the middle name of most of the PC-based action and adventure games this book addresses, you want it to be inside the game between you and an imp or a dinosaur, not between you and a

patch or an upgrade. Some of the mysteries of RAM, IRQs and DMAs can rival any of the tomb or the trap door. Help is in hand here, as the authors cover subjects like hard drives, video problems, DOS and Win95 enigmas, cable connections, modem gaming and using laptops. The only thing this tome doesn't have is a holster. ■

## EVOLVE SERIES V MULTIMEDIA MARVEL

- Asus VX97 MotherBoard w/512K
- Intel Pentium 200 MHz
- Intel Triton 430VX Chipset
- 32 MB EDO RAM 60ns
- 1.44MB Floppy Drive
- PCI Enhanced IDE Controller
- High Speed I/O (2S 1P)
- Western Digital 3.1 GB EIDE HD
- Diamond 3D 2000 w/2MB
- 16X CD ROM
- SoundBlaster 16 Compatible
- Acer 60 Watt Speakers
- 33.6K Fax/Modem
- Microsoft Win '95 CD
- Mini Tower Case
- Mitsumi 104-Key Keyboard
- Microsoft Mouse w/Mouse Pad

**\$985**

•ADD 32MB EDO.....\$99

## EVOLVE SERIES VI 166 MMX MONSTER

- Asus VX97 M/B w/512K PB
- Intel MMX 166 Processor w/ fan
- Intel Triton 430 VX Chipset
- 32 MB EDO RAM 60ns 72pin
- 1.44 MB Floppy Drive
- 32 Bit EIDE w/ High Speed I/O
- Western Digital 3.1GB EIDE HD
- Diamond 3D 2000 w/4MB DRAM
- Soundblaster Awe 64 Value
- Rockwell 56K Flex Fax/Modem
- 16X CDROM
- Acer 60 Watt Speakers
- Medium Tower Case
- Microsoft Windows 95 CD
- Northgate Omni Keyboard
- Microsoft Mouse w/Pad

**\$1089**

•ADD Iiyama 9017-E 17".....\$615

## EVOLVE SERIES VII CAD DESIGN STATION

- Intel Venus Pentium Pro MB
- Intel Pentium Pro 180 MHz CPU
- Intel 440FX Chipset
- 64MB EDO RAM 60ns
- 1.44 MB Floppy Drive
- 32 BIT EIDE w/2S/1P/1G(16550)
- Quantum Ultra DMA 3.2GB 33 Mb/s
- Diamond Fire GL 1000 w/8MB
- Soundblaster AWE 64 Value
- 24X CD-ROM
- 33.6K Combo Modem
- Acer 60 Watt Speakers
- Medium Tower Case ATX
- Microsoft Windows NT Workstation
- Mitsumi 104-key Keyboard PS/2
- Logitech Mouseman II

**\$1479**

•ADD 64MB EDO.....\$195

## EVOLVE SERIES IX DUAL DIMENSION NT PRO

- Intel Providence Dual Pentium Pro
- Intel Pentium Pro 180 CPU
- 64MB ECC EDO RAM 60ns
- 1.44 MB Floppy Drive
- 24X CD ROM
- On-Board Adaptec 2940UW
- Two IBM 4.3 GB UW SCSI HD
- Onboard Intel 10/100 Ethernet
- Diamond 3D 2000 w/2MB
- Mitsumi 104-key Keyboard
- Microsoft NT 4.0 Workstation
- On Board SB16 sound
- ATX Full Tower
- Microsoft Mouse w/Mouse Pad

**\$2159**

•Add Second Pentium Pro 180.....\$199  
•Add 64MB ECC EDO RAM.....\$295

## Win 95 Station

- FIC Motherboard PCI w/256K
- Intel Triton VX Chipset
- Intel Pentium 150 w/fan
- 16 MB RAM 60ns 72pin EDO
- 1.44 MB Floppy Drive
- 32 BIT EIDE w/2S/1P/1G(16550)
- Quantum 2.1 GB EIDE HD
- Diamond PCI w/1MB SVGA
- 20X CDROM
- Soundblaster 16 Compatible
- 33.6K Combo Modem
- Acer 60 Watt Speakers
- 104-Key Keyboard
- Mini Tower Case
- Microsoft Windows 95 CD
- Mouse With Pad

**\$719**

•TO Pentium 200 MHz MMX.....\$120

## AMD K6-200 MMX

- ASUS TX97-E Pentium MB
- 512k Pipe Line Burst Cache
- AMD K6-200 MHz w/MMX CPU
- 32MB EDO RAM 60ns
- 1.44 MB Floppy Drive
- Quantum 3.2 GB Ultra DMA HD
- Diamond PCI 2MB Video
- 20X CDROM
- SoundBlaster 16 Compatible
- 33.6K Combo Modem
- Super Mini Case
- 3 Button Mouse w/Pad
- Windows 95 CD
- Acer 60 Watts Speakers
- Northgate Evolution Keyboard

**\$999**

•TO AMD K-6 233MHz MMX.....\$109

## PRODUCTS SPOTLIGHT

### O.R. Technology LS-120

- 80 times the capacity of 1.44 FD
- Reads and writes 1.44 FD and 720K
- 5X the speed of 1.44 FD
- Industry Standard IDE Interface

**\$135**

### Iiyama Flat Panel 17" Display

**\$2499**

## Win NT Station

- Intel Atlanta P-II w/440LX AGP
- Intel Pentium II 300 MHz
- 32MB SDRAM
- 1.44 MB Floppy Drive
- 3COM PCI Networking Card
- Quantum 4.3 GB EIDE HD
- Diamond Viper AGP w/ 4MB
- 24X CDROM
- On Board 16 bit Sound
- Acer 60 Watts Speakers
- Keytronic PS/2 Keyboard
- ATX Medium Tower Case
- Microsoft Windows NT 4.0 WS
- Microsoft Intellimouse w/Pad

**\$2229**

•ADD 32MB SDRAM.....\$129

### HARDWARE TESTING

#### Nobody Tests Hardware Products Better Than Mad Dog Technologies.

Our staff has years of experience, particularly with graphics, 3D, video, and multimedia. Offering both thorough QA and Performance analysis services, Mad Dog will qualify any kind of hardware from controllers all the way up to fully integrated systems.

#### PRODUCT TESTING

Lower support costs by insuring that your products are bug free, guarantee great magazine reviews with topflight performance and feature sets, or show up your competition with eye dropping demos. We perform Windows 95/NT compliance testing.

#### NETWORK TESTING

Mad Dog Technologies also possesses a 50-node (and growing) network, perfect for testing client/server, inter or intranet-based applications, or anything else that demands a network.

For more information on these and other services call  
**(415) 495-1900** or visit **www.maddogtech.com**

### IC PROGRAMS

#### EPROM, PAL PROGRAMMING HOUSE

We program I.C.s and sell device programmers. Programming adapters & erasers are available. We sell EPROM emulators & PAL compilers. Very Reasonable Rates.

CONSULTANTS' NETWORK

## GENERAL

### Network Services...Computer Systems

Ready to help you with your computer needs.

**SMARTWORKS** team of consultants and field engineers will design your network from the ground up according to your needs. Or we'll maintain and upgrade your existing network to keep up with today's and tomorrow's environment.

**SMARTWORKS** can do it all...or just the bit you need. Instead of dealing with a network integrator and a hardware supplier and a software supplier, with **SMARTWORKS** you can get a **one source accountability** all in one package. From custom computer systems and servers built to your needs, to network design, to on-site support service, **SMARTWORKS** provides you with everything you need to run your network smoothly, without hassle.

- Network consulting and upgrades - Windows 3.1, 95, NT, UNIX
- One stop shopping for all your network and communication needs
- Software, hardware, custom designed systems with carefully selected components
- Micronics Motherboards!
- 24-Hour service anywhere in the Bay Area
- Full network integration
- Scaleable service - service to fit your needs
- 20 years experience in the industry
- Citrix WinFrame remote access software - work from anywhere at Pentium® speed
- Training - Windows 95 and NT
- Imaging
- Mass storage media
- CD jukeboxes and CD Towers
- Telecommunications including microwave and frame relay

CONSULTING

### LCI COMPUTERS SOFTWARE ENTERPRISES

We are a small corporation with plans to become a major contender in the software and hardware marketplace. We are looking for bright, energetic talent to join our team and grow with us.

We are about to bring our first major general business product, **BIZVIEWS**, to market.

If you can fulfill one or more of the functions listed here, reside near San Francisco, have lots of drive, can work long hours if necessary, and can dedicate yourself to help us become a leader, then we would like to talk to you. Home-office environment gives us flexibility until our growth necessitates relocation.

In the programming area we are ideally looking for Visual dBase experience, or at least object-oriented, GUI, dBase, or similar experience, 2-5 yrs. or more. One project is to design a general ledger, so some accounting programming would be desirable. In the other areas we are looking for people with solid general business knowledge. Web and sales experience a plus.

FAX RESUME TO: (415) 564-4763 Visit our Web site at: [www.lcibiz.com](http://www.lcibiz.com)

## Small Office/Home Office continued from page 62

It might say:

**"How About: 'Algae Soup + Deep Frying.'"**

This could give one the idea of making a puree of green vegetables (sauté some green onions and celery in olive oil with oregano. Put on water or stock, simmer until rich. Add spinach, and cook until just blanched and very green. Blend to a fine puree, add salt and pepper to taste.) Then right at the table, drop in some fresh deep-fried shrimp toast (Remove the crust from slices of bread. On one side spread a mixture of chopped raw shrimp, a little garlic, some ginger, salt, pepper, and cornstarch to bind. Deep fry in hot oil—shrimp side first—until golden.)

But I digress...

*The secret of invention is that the unlikely turns out to be useful. The idea generator gives you unlikely combinations—you need to find the use in them.*

If you would like to use this code, visit the online version (<http://www.microtimes.com/170/soho.html>) of this column for the macros, and a text version of the Kelly file.

## An Ally For Microsoft Product Users

While doing the research for this article, I encountered another good book from O'Reilly.

This one is *Word 97 Annoyances*, by Woody Leonhard, Lee Hudspeth and J.J. Lee. It is an expert book about software that many of us have to use, but written without that annoying tone of sycophancy that so many third-party manuals have. Leonhard and friends point out the many things that are wrong with MS Word—and they give you workarounds. A very worthwhile book. At least examine this slim volume before buying one of those 1020-page tomes you find in bookstores.

Leonhard et al. also have a free electronic newsletter, some software that extends Word (not free, though the beta is), and lots of other books they have written. Don't miss their Web site, whose address follows. ■

## Raising Money On The Internet continued on page 112

clients who haven't known of the investing options available through venture capital or who have been intimidated by the prospect.

## The Internet Investor

Technology Funding's idea of using the Internet to raise funds came as a result of new SEC interpretations on electronic commerce over the past two years, as well as a convergence between the company's traditional investor demographic and the average Internet user.

"Internet technology has been accepted by the general public as a viable vehicle for information gathering, electronic commerce, and online brokerage in particular," Brodbine says. "The people who are online today match the profile of our investors: technically and financially sophisticated."

Technology Funding seeks a minimum investment of \$1,000 from qualifying applicants and plans to use the Internet for their "Technology Funding Venture Capital Fund VI" for two years or until \$100 million is raised, whichever comes first. Though Brodbine admits that the method is unorthodox, she emphasizes that the investment targets for the \$100 million fund are not.

"Although we raise funds quite differently than most venture capital firms, we invest the funds in the traditional manner, and we frequently co-invest with these other firms," Brodbine says. "We intend to continue to make investments in the technology sector, including information, health care, and industrial technologies. The companies in which we invest must have a high upside potential—potential to grow to a market capitalization of \$100 million in five years."

## Know Before You Invest

One of the major criticisms of the company's plan to raise funds via the Internet comes from fellow venture capital firms that believe the average person doesn't really understand the massive risk inherent in funding startups. Like the professional gamblers that they are, these companies see the Internet's population as unwitting newcomers to the game who could lose, and lose big, very quickly.

Agreeing that the best investor is an educated one, Technology Funding has taken steps with its Web site to ensure that their potential VCs are well-versed in the ups-and-downs of nursing a technology or company to life.

"We encourage the investor to investigate this opportunity to be sure it is suitable for his or her investment objectives," Brodbine says. "The prospectus for the fund [available on the Web site] thoroughly explains what the investor should expect from the fund. We also include 'What is Venture Capital' on our Web site, a description of how venture capital works and what the investor may expect."

Time will tell whether Technology Funding's effort will be remembered as the aforementioned "kooky idea" or as an astute utilization of the powerful communication and convenience benefits offered by the Internet. It cannot be denied that the Web's gold-rush days are currently in full swing and it, like the world of venture capital, is a boom-or-bust environment. But Technology Funding trusts that its eighteen-year history, SEC approval and the Internet's growing legitimacy will dispel potential investors' doubts.

"Our hope is that it is widely successfully," Brodbine says. "Through Technology Funding Venture Capital Fund VI, we can offer the average investor the opportunity to invest in a risk/return profile that has historically out-performed most other asset categories over the long run." ■

#### OCTOBER 13—ONGOING

Free Online Learning  
SPECTRUM VIRTUAL UNIVERSITY

This fall, twenty instructors with expertise in a wide variety of fields will teach free classes at Spectrum Virtual University, an online learning center. VU's fall calendar offers a mix of courses on genealogy, writing, Internet law, home schooling, and psychology/self-help workshops. Computer classes include "Email Communication for ESL Students" and a 4-week workshop on Netscape Communicator for beginners. VU has pioneered many online learning innovations such as virtual study groups and interactive classroom bulletin boards and has taught more than 500,000 people from 128 countries by modem since 1981. New classes at VU start on the second Monday of each month; students can also join a class after it has begun. VU's fall calendar can be browsed at <http://www.vu.org/calendar.html>. Those wishing to receive a weekly newsletter of free classes and online events can subscribe at <http://www.vu.org/subscribe.html> or send an email request to [Subscribe@VU.org](mailto:Subscribe@VU.org). All classes on the fall calendar are free and open to the public.

#### OCTOBER 25—26

First Annual Vintage Computer Festival  
PLEASANTON

The first-ever public celebration of old computers, The Vintage Computer Festival is a two-day celebration of computers and their history and an opportunity to advance the field of computer collecting. The main mission of the Vintage Computer Festival is to promote the preservation of "obsolete" computers by offering attendees a chance to experience the technologies, people and stories that embody the remarkable tale of the computer revolution. The Festival will feature various speakers from the early years of the computer revolution (including Bill Fernandez, Apple Computer Employee #4), a vintage computer flea market, a vintage computer exhibition and a free drawing for a vintage Apple II, the computer credited for launching Apple Computer Inc. For more information, contact Sam Ismail at (510)294-5900, ext. 823 or URL: <http://www.siconic.com/vcf>.

October 19-22 NewTek Expo and Conference. Universal City, CA. Contact: 1-800-331-5706, [planexpos@ad.com](mailto:planexpos@ad.com).

October 22 "Intelligence, Technology, & ARTificial Society: Who or What Are We Becoming? Virtual Communities and Virtual Worlds." San Francisco. NTT New Media Minds Forum. Contact: (415)904-7700, or URL: <http://msp.sfsu.edu>.

October 25-26 Vintage Computer Festival. Pleasanton. Contact: (510)294-5900, ext. 823 or URL: <http://www.siconic.com/vcf>.

October 26-29 Rational ASQ International User Conference. Boston, MA. Contact: 1-888-889-0074, [sqa@jrshuman.com](mailto:sqa@jrshuman.com), or URL: <http://www.rational.com>.

#### November

November 2 Livermore Amateur Radio Klub (LARK) Swap Meet. Las Positas College, Livermore. LARK. Contact: (510)783-2803, or (510)447-3857 (eves.).

November 2-5 IEEE Military Communications Conference (MILCOM '97). Monterey. Contact: (408)756-6196, [k\\_lukens@lmsc.lockheed.com](mailto:k_lukens@lmsc.lockheed.com), or URL: <http://www.milcom97.com>.

November 3-5 Mercury Interactive World Wide Conference 1997. Walt Disney World, FL. Contact: 1-888-222-0073, or URL: <http://www.merc-int.com>.

November 4-8 IEEE Global Telecommunications Conference (GLOBECOM '97). Phoenix, AZ. Contact: (602)581-4297, or URL: <http://www.globecom97.agcs.com>.

November 8 Robert Austin Computer Show. Oakland. Robert Austin Corp. Contact: 1-800-243-7041 or URL: <http://www.robertaustin.com>.

November 13-15 The Fifth Annual Bionomics Conference: Living With Perpetual Evolution. San Francisco. Contact: (202)218-4633, [bionom@cato.org](mailto:bionom@cato.org), or URL: <http://www.cato.org/vents/calendar.html>.

November 13-16 ISTE's Sixth International Conference on Telecommunications and Multimedia in Education (ISTE's Tel•Ed '97). Austin, TX. Contact: 1-800-280-6218, [teledreg@oregon.uoregon.edu](mailto:teledreg@oregon.uoregon.edu), or URL: <http://www.iste.org>.

# Show Solutions

## This Exciting Expo Will Rock Your Internet World

Go to this well known show and learn, save and put your hands on all kinds of state of the art software and hardware. Grab hold of the Computer Webolution at exciting Expo!

This show has grown in scope in recent

months and many different entities in the internet arena have joined forces with this show.

Come and get information and save money. Meet Web Masters, talk with the Internet Cafe, attend seminars and get free Internet Access from companies

like SlipNet.

Come to this show and see why Robert Austin Computer Shows have long been a favorite and how they are helping their customers succeed in the Computer Webolution.

# Expert Computer & Networking Services

## INTEL PORTLAND PENTIUM® II

- Intel Pentium® II 266MHz MMX
- Intel "Portland" Motherboard
- 32MB RAM
- 2.5GB EIDE Hard Drive
- 1.44 Floppy Drive
- ATI 3D Pro Turbo PC2TV w/8MB
- 24X EIDE CD-ROM
- SoundBlaster AWE 64
- Yamaha Stereo Speaker w/Sub Woofers
- Deluxe ATX Medium Tower
- Mitsumi Windows 95 Keyboard
- Microsoft PS/2 Mouse w/Pad

**Intel-266MHz MMX  
\$1699**

## INTEL VENUS PENTIUM® PRO

- Intel Pentium® Pro 200MHz CPU
- Intel "Venus" Motherboard
- 32MB RAM (60ns)
- 1.2GB EIDE Hard Drive
- 1.44 Floppy Drive
- Diamond Stealth 3D w/2MB
- Deluxe ATX Medium Tower
- Mitsumi Windows 95 Keyboard
- PS/2 Mouse w/Pad

**PRO-180/200MHz  
\$799/1099**

## INTEL DAKOTA DUAL PENTIUM® II 300MHz MMX

- One Intel Pentium® II 300MHz MMX CPU
- Intel DK440LX AGP Motherboard
- Intel Latest 440LX (AGP) Chipset
- 64MB High Performance SDRAM (10ns)
- 1.44 Floppy Drive
- 6.4GB Ultra IDE HDD w/Ultra DMA/33
- Matrox Millennium II w/8MB
- Toshiba 24X Speed CD-ROM Drive
- Intel EtherExpress Pro 10/100 Network Card
- Adaptec 7895 Dual Channel SCSI w/RAID Support
- Sound Blaster AWE 64 Sound Card
- Yamaha Stereo Speakers
- Deluxe ATX Full Tower w/3 Cooling Fans
- Mitsumi Windows 95 Keyboard
- Microsoft PS/2 Mouse w/Pad

**\$3488**

## INTEL ATLANTA PENTIUM® II 300MHz MMX

- Intel Pentium® II 300MHz MMX CPU
- Intel AL440LX AGP Motherboard w/USB
- Intel Latest 440LX (AGP) Chipset
- 64MB High Performance SDRAM (10ns)
- 1.44 Floppy Drive
- Matrox Millennium II w/8MB
- 6.4GB Ultra IDE HDD w/Ultra DMA/33
- Toshiba 24X Speed CD-ROM Drive
- Sound Blaster AWE 64 Gold w/4MB Memory
- Yamaha Stereo Speakers
- Deluxe ATX Medium Tower
- Mitsumi Windows 95 Keyboard
- Microsoft PS/2 Mouse w/Pad

**\$2888**

## INTEL ANCHORAGE PERFORMER

- Intel Pentium® MMX Processor
- Intel Anchorage Motherboard
- 512K Pipeline Burst Cache
- 16MB DIM SRAM, 10ns
- 1.2GB EIDE Hard Drive
- 1.44 Floppy Drive
- 20X EIDE CD-ROM Drive
- Diamond Stealth 3D w/4MB
- Sound Blaster 16 on Board
- Yamaha Stereo Speaker
- Mitsumi Windows 95 Keyboard
- Deluxe ATX Medium Tower
- MS Compatible Mouse w/Pad

**Monitor Sold Separately  
P-200MMX.....\$899**

**P-233MMX

## Is Your Listing Missing?

**Free user group and association listings** are limited to the group's name, meeting information, contact name and phone number, and a ten-word description. They will be **deleted at six-month intervals** to ensure timeliness and accuracy of information.

**Free BBS listings** are limited to the board's name, phone number, hours, baud rates, parameters, and a ten-word description. Please let our readers know if your BBS is free or requires a fee. Because we have an ongoing problem of boards shutting down without telling us, much to the annoyance of would-be callers and the new phone number's owner alike, we will **delete these listings after they've run three months**. The notice at the end of the listing—Exp. #xxx—refers to the last issue number it will appear in unless renewed.

**You can update or renew your listings at any time. If yours is missing, send your listing information to:**

**US Mail** should go to: MicroTimes User Group, 1300 Clay St., Ste. 800, Oakland, CA 94612. **Faxes** are welcome at (510)768-1288. **Email** can be sent to: [cassidy.allen@microtimes.com](mailto:cassidy.allen@microtimes.com) or MCI:MICROTIMES.

# Email Privacy In The Next Century

## Or, Remailing To Spies

### Sending secure

messages through the Internet may get harder and harder if the government, led by the FBI, makes using real encryption illegal. This issue began with the debate over the Clipper Chip and continues with debate over encryption usage and exportation.

It's as if you can't do anything privately.

One technique for privacy many Internet users have employed has been the use of remailers—people who take mail in and re-mail it with anonymous return addresses. People seek anonymity to avoid getting on SPAM lists and so they can be, well...anonymous!

If encryption is made illegal and you want to encrypt a message, maybe a remailer would be the way to do it without getting caught.

### Paranoid Thoughts

But who is running these remailing operations?

Recently it was divulged that government spy agencies were behind many of the remailing operations. This seems somewhat logical. But how would you go about securing anonymity if you suspected that some anonymous remailers were run by government agencies, or worse, some weird cult?

What if you suspected that those who run anonymous remailers were vulnerable to legal attacks, or could be bribed to divulge information about their users?

What if you suspected that the amount of traffic flow through an anonymous remailer was too low to effectively obscure your usage of it?

The solution to these fears was suggested to me by an anonymous (go figure) reader, who says, "The only way you could be really sure about security is to run a remailer of your own! All messages you send out, you make sure that they at least chain through your *own* remailer."

### Crypto Chains

The idea of chaining is to send your message through multiple remailers. This involves multiple encryption "envelopes." Each remailer decrypts the message, only to find another encrypted mes-

sage destined for another remailer. If these chained messages pass through your own remailer, you *know* when someone is trying to bribe you for information. You know when the law comes knocking. You can doctor the records to leave no trace of your own message. Cyberpunk remailers would not keep logs but if they are run on a larger, multi-user UNIX machine, the system may keep logs at a global level.

It's possible that most remailers run remailing operations to simply guarantee that their own mail is anonymous.

My anonymous friend says: "Anonymous remailers are *not* necessarily used for crimes or espionage. I certainly don't know anyone, nor have I heard of anyone, who uses them for this purpose. They are terribly difficult to use. You cannot depend on a message arriving in a timely fashion. They are designed to randomly delay mail to foil traffic analysis. The software is finicky beyond belief; one misplaced letter and it doesn't work. DOS line endings (CR/LF) don't work so all mail has to be UNIX-ISED (line endings LF only). Often, a message will not even go through, it gets lost. You might as well just PGP encrypt your mail and send it directly to the intended recipient.

"So they are far from effortless. In fact, if you were a spy, you could just go to a lonely pay phone, or hotel, and modem out the information. Much easier than using an anonymous remailer. But once again, people don't always do the easy thing and thus, people still might use remailers for espionage. If so, I think they are stupid.

"Using remailers for espionage is not safe. I'm sure the US government *does* have an almost complete list of people using PGP (at one time, when you wanted to download a copy, you had to fill out a form giving your name etc. and agreeing not to export it) or barring that, PGP usage in email is easy to detect in the big routers MAE-West, MAE-East, etc., and the addresses of those using them can easily be logged.

"Also, traffic to all the remailers can be logged, even though the contents cannot necessarily be known. Should some nasty criminal incident involve a remailer, the spooks can

interview/interrogate all known users of the remailer. So, if I were a spy, I certainly would not want to be known as a remailer user.

"Many people use remailers because they are scared that someone will use their email address on Usenet to forge messages or send kiddy porn. I see it happen every day.

"Remailers are a *technical* solution to a problem where the law has failed. That's all. The 21st century is shaping up to be the century of the individual. If you look around the world you see individuals standing up to large countries, groups and companies and sometimes succeeding. *What* someone says is the important thing. *Not* who said it. Identifying the sayer of something is only useful to people who want to suppress what is being said.

"The human race is coming out of a dark age where people have been convinced they needed Kings, Generals, Emperors and Popes to survive. We still see it today with people putting so much trust in The President. The important people are the elected representatives in Congress, but people have a built-in awe of the one-top-person hierarchy. Perhaps it's biological, perhaps just a vestige of 6000 years of civilization. I don't know, but I do know it is starting to wane. Hopefully, millions of people won't die anymore on the whims of the power hungry."

An interesting perspective, but one that introduces the concept of the poison pen-letter as a way of life. My anonymous friend has an idealistic perspective on the power of an idea. And while it's true that what was actually said might be more important than who said it, it is sometimes important to know who said it. There are such things as liars and subversives who exist in a shadowy underworld. Too many hoaxes are perpetrated on the Internet not to be concerned that one may trigger a stock market crash or a war. Certainly it would be easy to ruin someone's life anonymously if you do it right.

The fact is that anonymity and privacy aren't the same thing, and you can be certain of a clash sometime soon. ■

# Been There, Done That!

The FT15  
LCD multimedia monitor

1024 x 768 resolution  
14.5" diagonal view  
Amplified stereo speakers  
2.5" thin (without base)  
7.5 lb. light (without base)  
Easily detached base  
(FT15 also available in charcoal gray)

Our current model, the FT15, is Sceptre's 5th generation flat panel monitor. We definitely have been there and done that when it comes to providing LCD flat panel monitor solutions! Read what these people have to say about Sceptre:

"I was confronted with the problem of creating an easy to use, computer friendly workstation for our executives who demonstrate our Britannica Online®... I needed a monitor that was both technically and aesthetically appropriate ... Sceptre's LCD allows us to do everything we need to. The price was within our range as well. It's worked like a champ."

*Larry Merrick, Vice President, MIS  
Encyclopedia Britannica*

"I reviewed a few different flat panel monitors. Sceptre's was the best in terms of dimensions, features, and lack of interference. It was also the most realistically priced. It was a pretty easy choice."

*Richard Hinson, medical research scientist  
Wyeth-Ayerst Research*
